DECLARATION OF CONFORMITY

according to FCC Part 15

Responsible Party Name: Fujitsu Computer Systems Corporation
Address: 1250 E. Arques Avenue, M/S 122
Sunnyvale, CA 94085
Telephone: (408) 746-6000

Declares that product: Base Model Configuration:
LifeBook A6030 notebook

This device complies with Part 15 of the FCC Rules. Operations are subject to the following two conditions: (1) This device may not cause harmful interference, (2) This device must accept any interference received, including interference that may cause undesired operation.
IMPORTANT SAFETY INSTRUCTIONS

This unit requires an AC adapter to operate. Use only UL Listed Class 2 Adapters with an output rating of 19 VDC, with a current of 4.22A.

AC adapter output polarity:

When using your notebook equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

- Do not use this product near water for example, near a bathtub, washbowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
- Avoid using the modem during an electrical storm. There may be a remote risk of electric shock from lightning.
- Do not use the modem to report a gas leak in the vicinity of the leak.
- Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
- To reduce the risk of fire, use only No. 26 AWG or larger UL Listed or CSA Certified Telecommunication Line Cord.
- For TV tuner use: To protect from overvoltages and transients on the Cable Distribution System, make sure that the outer shield of the coaxial cable is connected to earth (grounded) at the building premise as close to the point of cable entrance as practicable, as required per NEC Article 820.93, ANSI/NFPA 70: 2005. If you have questions about your CATV installation, contact your service provider.

SAVE THESE INSTRUCTIONS

For Authorized Repair Technicians Only

Danger of explosion if Lithium (clock) battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer’s instruction.

For continued protection against risk of fire, replace only with the same type and rating fuse.

System Disposal

LAMP(S) INSIDE THIS PRODUCT CONTAIN MERCURY AND MUST BE RECYCLED OR DISPOSED OF ACCORDING TO LOCAL, STATE, OR FEDERAL LAWS.

Preface
Preface

ABOUT THIS GUIDE
The LifeBook A6030 notebook from Fujitsu is a powerful computer, with a fast Intel® Core™ 2 Duo technology with dual-core processors and an integrated Intel GMA965 graphics controller with support for (depending upon the amount of system memory) up to 384 MB of graphics memory. The notebook has a built-in 15.4” TFT wide XGA Crystal View color display. This system brings the computing power of a desktop personal computer to a portable environment.

Your computer comes with Microsoft Windows Vista™ Home Premium or Microsoft Windows Vista™ Business Edition pre-installed.

This manual explains how to operate your LifeBook notebook’s hardware and built-in system software.

Conventions Used in the Guide
Keyboard keys appear in brackets.
Example: [Fn], [F1], [Esc], [Enter] and [Ctrl].

Pages with additional information about a specific topic are cross-referenced within the text.
For example: (See page xx.)

Onscreen buttons or menu items appear in bold
Example: Click OK to restart your LifeBook notebook.

Fujitsu Online
You can go directly to the online Fujitsu Product catalog for your LifeBook notebook by going to www.shop-fujitsu.com or by clicking on Start -> Fujitsu Weblinks -> LifeBook Accessories Website.
You can also reach Fujitsu Service and Support online by clicking on Start -> Fujitsu Weblinks -> Fujitsu Service and Support.

LIMITED WARRANTY
Your LifeBook notebook is backed by a Fujitsu International Limited Warranty. Check the service kit that came with your notebook for the Limited Warranty period and terms and conditions.
Getting to Know
Your LifeBook Notebook
Overview
This section describes the components of your Fujitsu LifeBook A6030 notebook. We strongly recommend that you read it before using your notebook – even if you are already familiar with notebook computers.

UNPACKING
When you receive your LifeBook notebook, unpack it carefully and compare the parts you have received with the items listed below.

For a pre-configured model you should have:
- LifeBook A6030 notebook (Figure 2-1)
- AC adapter with AC power cord (Figure 2-2)
- Lithium ion Battery, pre-installed
- Phone and Modern (RF-11) telephone cable
- Drivers and Application Restore (DAR) disc
- Getting Started Guide
- User’s Guide (this document)
- International Limited Warranty Brochure
- Microsoft®-associated product materials

Depending on your system configuration, the following optional item may be included with your system:
- Additional battery
- ExpressCard TV Tuner
- Remote control package (for Windows Vista Home Premium models)
- External USB floppy disk drive
- Point and Write Pad stylus

Depending on your configuration, you may receive the following application CD:
- Cyberlink Application CDs

Once you have checked and confirmed that your LifeBook system is complete, read through the following pages to learn about all of your notebook’s components.
Locating the Controls and Connectors

**TOP COMPONENTS**

The following is a brief description of your LifeBook notebook’s top components.

**Display Panel**
The display panel is a color LCD panel with back lighting for the display of text and graphics.

**Status Indicator Panel**
The Status Indicator Panel displays symbols that correspond with a specific component of your LifeBook notebook. Note that the Status Indicator Panel is divided into two different locations. (See Status Indicator Panel on page 11 for more information)

**Power/Suspend/Resume Button**
The Power/Suspend/Resume button allows you to suspend notebook activity without powering off, resume your LifeBook notebook from suspend modes, and power on your notebook when it has been shut down from Windows. (See Power/Suspend/Resume Button on page 27 for more information)

**Keyboard**
A full-size keyboard with dedicated Windows keys. (See Keyboard on page 13 for more information)

**Stereo Speakers**
The built-in dual speakers allow for stereo sound.

**Microphone/Line-In Jack**
The microphone/line-in jack allows you to connect an external stereo microphone. (See Microphone/Line-In Jack on page 43 for more information)

**Headphone/Line-Out Jack**
The headphone/line-out jack allows you to connect headphones. (See Optical Digital Audio Connector on page 46 for more information)

**Wireless LAN/Bluetooth On/Off Switch**
The wireless LAN/Bluetooth on/off switch is used to turn on and off the WLAN and Bluetooth devices. Switching the device off when not in use will help to extend battery life. (Note that either or both devices can be turned on and off using this switch). (See Activating the WLAN Device on page 87 for more information)

**Touchpad Pointing Device**
The touchpad pointing device is a mouse-like cursor control with three buttons: right and left mouse-like buttons and a scroll/fingerprint sensor. Note that certain models have an optional Point and Write Pad rather than the standard touchpad that uses stylus input as well as finger input. (See Touchpad Pointing Device on page 18 for more information). The scroll button may be used as a fingerprint sensor device. (See Fingerprint Sensor Device on page 97 for more information)

**LifeBook Application Panel/Volume Buttons**
The LifeBook Application Panel/Volume Buttons provides one-touch application launch and volume up/down capabilities. (See LifeBook Application Panel on page 19 for more information)
LEFT-SIDE PANEL COMPONENTS
The following is a brief description of your LifeBook notebook’s left-side components.

Stylus/Stylus Slot
The stylus and stylus slot are found only on LifeBook models which have the optional Point and Write Pad rather than the standard touchpad. (See Touchpad Pointing Device on page 15 for more information)

Air Vents
The air vents are used to cool the system to prevent overheating.

Optical Disk Drive
The optical disk drive allows you to burn and play back media discs. (See Optical Disk Drive on page 33 for more information)

Optical Disk Drive Emergency Release
The Optical Drive Emergency Release allows you to open the media player tray without powering on your LifeBook notebook. (See Emergency Media Tray Release on page 34 for more information)

To protect your notebook from damage and to optimize system performance, be sure to keep all air vents unobstructed, clean, and clear of debris. This may require periodic cleaning, depending upon the environment in which the system is used.

Do not operate the notebook in areas where the air vents can be obstructed, such as in tight enclosures or on soft surfaces like a bed or cushion.
RIGHT-SIDE PANEL COMPONENTS
The following is a brief description of your LifeBook notebook’s right-side components.

ExpressCard Eject Button
The ExpressCard eject button is used for removing an ExpressCard from the slot.

ExpressCard Slot
The ExpressCard slot allows you to insert an ExpressCard. (See PC Cards/ExpressCards™ on page 38 for more information)

USB 2.0 Ports
The USB 2.0 ports allow you to connect Universal Serial Bus devices. USB 2.0 transfers data at up to 480 Mbps and is backward compatible with USB 1.1 devices, which transfer data at up to 12 Mbps. There is a total of five USB 2.0 ports on your system: one on the right side and four in the back. (See Universal Serial Bus Ports on page 42 for more information)

DC Power Jack
The DC power jack allows you to plug in the AC adapter to power your LifeBook notebook and charge the internal Lithium ion battery.

IEEE 1394 (4-pin) Jack
The 4-pin 1394 jack is used to connect between your notebook and an IEEE 1394 peripheral such as a digital video camera. (See IEEE 1394 Port on page 43 for more information)

SD/Memory Stick/xD Card Slot
The Secure Digital/Memory Stick/xD Picture Card slot allows you to insert a memory card for data storage. This architecture allows you to transfer data from a variety of different digital devices. (See Inserting Memory Stick/SD/xD Cards on page 36 for more information)

PC Card Slot
The PC Card Slots allow you to insert a Type I or Type II PC Card. (See PC Cards/ExpressCards™ on page 38 for more information)

PC Card Eject Button
The PC Card eject button is used for removing a PC Card from the slot.
Getting to Know Your LifeBook

Figure 2-6. LifeBook notebook back panel

BACK PANEL COMPONENTS
Following is a brief description of your LifeBook notebook's back panel components.

Anti-theft Lock Slot
The anti-theft lock slot allows you to attach an optional physical lock down device.

USB 2.0 Ports
The USB 2.0 ports allow you to connect Universal Serial Bus devices. USB 2.0 transfers data at up to 480Mbps and is backward-compatible with USB 1.1 devices, which transfer data at up to 12Mbps. There is a total of five USB 2.0 ports on your system: one on the right side and four in the back. (See Universal Serial Bus Ports on page 42 for more information)

Gigabit LAN (RJ-45) Jack
The internal LAN (RJ-45) jack is used for an internal Gigabit (10Base-T/100Base-Tx/1000Base-T) Ethernet LAN connection. (See Internal LAN (RJ-45) Jack on page 42 for more information)

S-Video Out Port
The S-Video output is used to transmit a high resolution video signal to a compatible TV or VCR. (See S-Video Out Port on page 43 for more information)

Air Vents
The air vents are used to cool the system to prevent overheating.

External Video Port
The external video port allows you to connect an external monitor or LCD projector. (See External Video Port on page 43 for more information)

Modem (RJ-11) Telephone Jack
The Modem (RJ-11) telephone jack is for attaching a telephone line to the internal multinational 56K modem. (See Modem (RJ-11) Telephone Jack on page 42 for more information)

To protect your notebook from damage and to optimize performance, be sure to keep all air vents unobstructed, clean, and clear of debris. They may require periodic cleaning, depending upon the environment in which the system is used.

Do not operate the notebook in areas where the air vents can be obstructed, such as in tight enclosures or on soft surfaces like a bed or cushion.

The internal modem is not intended for use with Digital PBX systems. Do not connect the internal modem to a Digital PBX as it may cause serious damage to the internal modem or your entire notebook. Consult your PBX manufacturer’s documentation for details. Some hotels have Digital PBX systems. Be sure to find out BEFORE you connect your modem.

The internal multinational modem is designed to the ITU-T V.90/v.92 standard. Its maximum speed of 53000bps is the highest allowed by FCC, and its actual connection rate depends on the line conditions. The maximum speed is 33600 bps at upload, in accordance with FCC regulations.

For additional information about the modem, refer to the Fujitsu website at: http://www.computers.us.fujitsu.com
The following is a brief description of your LifeBook notebook’s bottom panel components.

**Main Unit and Configuration Label**
The configuration label shows the model number and other information about your notebook. In addition, the configuration portion of the label has the serial number and manufacturer information that you will need to give your support representative. It identifies the exact version of various components of your notebook.

**Air Vents**
The air vents are used to cool the system to prevent overheating.

**Lithium ion Battery Bay**
The battery bay contains the internal Lithium ion battery. It can be opened for the removal of the battery when stored over a long period of time or for swapping a discharged battery with a charged Lithium ion battery. (See Lithium ion Battery on page 31 for more information)

**Memory Upgrade Compartment**
Your notebook comes with high speed Double Data Rate Synchronous Dynamic RAM (DDR SDRAM). The memory upgrade compartment allows you to expand the system memory capacity of your notebook, thus improving overall performance. (See Memory Upgrade Module on page 40 for more information).

---

**To protect your notebook from damage and to optimize system performance, be sure to keep all air vents unobstructed, clean, and clear of debris. This may require periodic cleaning, depending upon the environment in which the system is used.**

**Do not operate the notebook in areas where the air vents can be obstructed, such as in tight enclosures or on soft surfaces like a bed or cushion.**
Status Indicator Panel

The Status Indicator displays symbols that correspond with a specific component of your Fujitsu LifeBook notebook. These symbols tell you how each of those components are operating. (Figure 2-8)

**POWER INDICATOR**

The Power indicator symbol states whether your system is operational. It has several different states, each of which tells you the mode your notebook is in.

- **Steady On:** This means that there is power to your LifeBook notebook and that it is ready for use.
- **Flashing:** This means that your notebook is in Standby mode.
- **Steady Off:** This means that your system is either in Save-to-Disk mode, or that your notebook has been turned off.

If you are charging your battery, the Power indicator will remain on even if your notebook is shut off. The Power indicator will also remain on if you have either adapter connected and are shut down from Windows.

**BATTERY CHARGING INDICATOR**

When the AC adapter is connected to your system, this indicator shows the status of the battery charging, as follows:

- **Green, solid:** The battery is either fully charged or the AC adapter is connected and there is no battery pack installed.
- **Orange, solid:** Charging is suspended due to excessively high or low battery temperature.
- **Orange, blinking:** Charging is suspended due to excessively high or low battery temperature.
- **Off:** No AC adapter is connected.

**BATTERY LEVEL INDICATOR**

The Battery Level indicator displays the charge level of the battery pack, as follows:

- **Green, solid:** Battery is between 51% and 100% charged.
- **Orange, solid:** Battery is between 13% and 50% charged.
- **Red, solid:** Battery is between 0% and 12% charged.
- **Orange, blinking:** Blinks during battery status measurement (four seconds after the battery is installed).
- **Red, blinking:** There is a problem with the battery.
- **Off:** There is no battery installed.

- If the battery pack is installed while the power is turned off, the battery level indicator will display the charge level for five seconds after it blinks orange.
- If the AC adapter is not connected or the battery pack is not fully charged when the computer is switched to standby mode, the indicator will blink. The LED blinks at the rate of one second on/five seconds off.

- Batteries subjected to shocks, vibration or extreme temperatures can be permanently damaged.

- A shorted battery is damaged and must be replaced.
HDD/ODD ACCESS INDICATOR

The Hard Disk Drive/Optical Disk Drive Access indicator tells you that the drive is being accessed. If the Auto Insert Notification function is active, the indicator will flash periodically when your system is checking the optical drive. If the Auto Insert Notification function is not active, the indicator will only flash when you access the drive. The default setting is the Auto Insert Notification function active.

The Auto Insert Notification function will periodically check for a disc installed in the drive, causing the HDD/ODD Access indicator to flash. The Auto Insert Notification function allows your system to start an optical disc automatically as soon as it is inserted in the drive and the tray is closed. It will begin playing an audio DVD/CD or will start an application if the DVD/CD has an auto-run file.

NUMLK INDICATOR

The NumLk indicator states that the integral keyboard is set in ten-key numeric keypad mode.

CAPSLOCK INDICATOR

The CapsLock indicator states that your keyboard is set to type in all capital letters.

SCRLK INDICATOR

The ScrLk indicator states that your scroll lock is active.
Getting to Know Your LifeBook

USING THE KEYBOARD
Your LifeBook notebook has an integral 86-key keyboard. The keys perform all the standard functions of a 101-key keyboard, including the Windows keys and other special function keys. This section describes the following keys:

- Numeric keypad
- Cursor keys
- Function keys
- Windows keys

NUMERIC KEYPAD
Certain keys on the keyboard perform dual functions as both standard character keys and numeric keypad keys. NumLk can be activated by pressing the [NumLk] keys. Turning off the NumLk feature is done the same way. Once this feature is activated you can enter numerals 0 through 9, perform addition (+), subtraction (-), multiplication (*), or division (/), and enter decimal points (.) using the keys designated as ten-key function keys. The keys in the numeric keypad are marked on the front edge of the key to indicate their secondary functions.

WINDOWS KEYS
Your LifeBook notebook has two Windows keys, consisting of one Start key and one Application key. The Start key displays the Start menu. This button functions the same as your on-screen Start menu button. The Application key functions the same as your right mouse button and displays shortcut menus for the selected item. (Refer to your Windows documentation for additional information regarding the Windows keys.)

CURSOR KEYS
The cursor keys are the four arrow keys on the keyboard which allow you to move the cursor up, down, left and right in applications. In programs such as Windows Explorer, it moves the "focus" (selects the next item up, down, left, or right).

FUNCTION KEYS
Your LifeBook notebook has 12 function keys, F1 through F12. The functions assigned to these keys differ for each application. You should refer to your software documentation to find out how these keys are used.

- [Fn+F3]: Pressing [F3] while holding [Fn] will toggle the Audio Mute on and off.
- [Fn+F4]: Pressing [F4] while holding down [Fn] allows you to toggle between an internal mouse (touchpad) and an external mouse (USB-type).
- [Fn+F5]: Pressing [F5] while holding [Fn] allows you to toggle between video compensation and no compensation. (Video compensation controls spacing on the display. When it is enabled, displays with less than 1280 x 800 or 800 x 600 pixel resolution will still cover the entire screen.)
- **[Fn+F6]**: Pressing **[F6]** repeatedly while holding **[Fn]** will lower the brightness of your display.
- **[Fn+F7]**: Pressing **[F7]** repeatedly while holding **[Fn]** will increase the brightness of the display.
- **[Fn+F8]**: Pressing **[F8]** repeatedly while holding **[Fn]** will decrease the volume of your LifeBook notebook.
- **[Fn+F9]**: Pressing **[F9]** repeatedly while holding **[Fn]** will increase the volume of your LifeBook notebook.
- **[Fn+F10]**: Pressing **[F10]** while holding **[Fn]** allows you to change your selection of where to send your display video. Each time you press the combination of keys you will step to the next choice. The choices, in order, are: built-in display panel only, both built-in display panel and external monitor or external monitor only.
Touchpad Pointing Device

The Touchpad pointing device comes built into your LifeBook notebook. It is used to control the movement of the pointer to select items on your display panel. The Touchpad is composed of a cursor control, a left and right button, and a scrolling button/fingerprint sensor.

The cursor control works the same way a mouse does, and moves the cursor around the display. It only requires light pressure with the tip of your finger.

The scrolling button allows you to navigate quickly through pages. Note that the scrolling button is also used as a Fingerprint Recognition Sensor. (See Fingerprint Sensor Device on page 99 for more information)

The left and right buttons function the same as mouse buttons. The functionality of the buttons may vary depending on the application being used. (Figure 2-10)

CLICKING
Clicking means pushing and releasing a button. To left-click, move the cursor to the item you wish to select, press the left button once, and then immediately release it. To right-click, move the mouse cursor to the item you wish to select, press the right button once, and then immediately release it. You also have the option to perform the clicking operation by tapping lightly on the Touchpad once. (Figure 2-11)

DOUBLE-CLICKING
Double-clicking means pushing and releasing the left button twice in rapid succession. This procedure does not function with the right button. To double-click, move the cursor to the item you wish to select, press the left button twice, then immediately release it. You also have the option to perform the double-click operation by tapping lightly on the Touchpad twice. (Figure 2-12)

An external mouse can be connected to a USB port on your LifeBook notebook and used simultaneously with the Touchpad. However, if you boot the system with an external mouse connected the Touchpad will be disabled or enabled depending on the specifications in your BIOS settings. (See BIOS Setup Utility on page 25 for more information)
**Dragging**

Dragging means pressing and holding the left button, while moving the cursor. To drag, move the cursor to the item you wish to move. Press and hold the left button while moving the item to its new location and then release it. Dragging can also be done using the Touchpad. First, tap the Touchpad twice over the item you wish to move making sure to leave your finger on the pad after the final tap. Next, move the object to its new location by moving your finger across the Touchpad, and then release your finger. (Figure 2-13)

**Scrolling**

Using the scrolling sensor allows you to navigate through a document quickly without using the window’s scroll bars. This is particularly useful when you are navigating through online pages. To use the scrolling sensor, move your finger forward or backward across the button to scroll up or down a page. When you have reached the desired section of the page, raise your finger. (Figure )

Note that you can also scroll by sliding your finger up and down the right side of the touchpad. This feature is disabled by default, but you can enable it by going to Start -> Control Panel -> Mouse. The scrolling sensor is also used as a fingerprint sensor. To use the fingerprint sensor device, refer to the appendix of this document. (See Fingerprint Sensor Device on page 99 for more information)

**Touchpad Control Adjustment**

The Windows Control Panel allows you to customize your Touchpad with selections made from within the Mouse Properties dialog box.

**Optional Point and Write Pad**

Certain configurations of this LifeBook notebook have an optional Point and Write Pad in the location of the touchpad pointing device. The Point and Write Pad is compatible with the latest Microsoft Windows Vista operating system. For example, use MS Journal for notetaking with the pad, and use MS Paint for drawing pictures. The Point and Write Pad enriches the user’s experience by enabling powerful note-taking, handwriting recognition, and fast navigation options under the Vista environment that allow the user to quickly and intuitively get results faster and more efficiently. (Figure 2-15)

The Point and Write Pad stylus is used on the pad just as if it were a pen writing on paper.

1. Remove the stylus from the stylus slot on the rear left side of the system. (See Left-Side Panel Components on page 7 for more information)
2. You can use the Point and Write Pad for clicking, double-clicking, scrolling, and dragging, just as you would with a touch pad. To use the Point and Write Pad for these functions, follow the instructions above for the touchpad, substituting the stylus for your finger.
Getting to Know Your LifeBook

- The stylus should not be used to tap on the display; it has no effect on the display, and could cause damage to the screen if so used.
- When using the stylus on the pad, you cannot use your finger to control the touchpad. If you want to use your finger on the touchpad, keep the stylus away from the pad, or it might interfere with the operation.
- Right-click function is not supported by the pen. Use the right button for right-click functions.
- Use the stylus gently on the pad so as not to damage the stylus or pad. Little pressure is required for the stylus to work effectively.
- Be careful not to leave the stylus on the keyboard or palm rest when closing the display.
- To change the double-tap speed, go to Control Panel -> Other Options -> Flat-point Digitizer.
Volume Control

Your Fujitsu LifeBook notebook has multiple volume controls which interact with each other.

CONTROLLING THE VOLUME

The volume can be controlled in several different ways:

- Volume can be set using the volume buttons to the right of the application buttons above the left of the keyboard. The buttons are labeled "Vol -" and "Vol +". (Figure 2-16)

  ![Volume buttons](image)

  **Figure 2-16 Volume buttons**

- Volume can be set from within the Volume Control on the Taskbar.
- Volume can be controlled with the F8 and F9 functions keys. Pressing [F8] repeatedly while holding [Fn] will decrease the volume of your notebook. Pressing [F9] repeatedly while holding [Fn] will increase the volume of your notebook.
- Volume can be controlled by many volume controls that are set within individual applications.
- Certain external audio devices you might connect to your system may have hardware volume controls.

Each source discussed above puts an upper limit on the volume level that must then be followed by the other sources.

We recommend that you experiment with the various volume controls to discover the optimal sound level.
LifeBook Application Panel

A unique feature of your notebook is the LifeBook Application Panel. The Application Panel makes your LifeBook notebook more than just another computer. This panel allows you to launch selected applications with the touch of a button.

Your LifeBook notebook is pre-installed with software utilities that let you operate and configure your LifeBook Application Panel. These utilities are found under [Start] -> All Programs -> Application Panel.

The panel consists of five buttons, labeled "My Home", "Web Search", "A", "B", and "C". Pressing any of the application buttons will launch a user-defined application. The defaults are as follows:

**CONFIGURING THE APPLICATION PANEL**

When you start your system, the LifeBook Application Panel is automatically activated. As an application launcher, the LifeBook Application Panel is very flexible, giving you a variety of options. To set up the panel to best suit your needs, the Application Panel Setup utility will quickly and easily help you make the most of this valuable feature.

By default, pressing the "My Home" button will open the Fujitsu Computer Systems Corporation home page. Pressing the "Web Search" button will open the Google search page.

Pressing the "A" or "B" buttons will open Notepad and Calculator, respectively. (Note that the "C" button is initially unassigned).

Any of these button defaults can be changed using the following procedure.

To configure your LifeBook Application Panel with the Application Panel Setup utility:

1. Click on [Start] -> All Programs.
2. Select LifeBook Application Panel from the drop-down menu, then click on Setup of LifeBook Application Panel. The Button Setting window will open.

The Button Setting window has tabs that correspond to the buttons on the application panel. When you receive your notebook, these buttons are pre-configured to launch specific programs, as noted above.

In order to reconfigure a button to launch a different program, follow these steps:

1. On the Button Setting window, click the tab of the button you want to configure.
2. Ensure that the "Enable this button" check box is selected, then click the [Application registration...] button.
3. You can either select an application from the Start menu, or select an application directly by clicking the "Select from Start Menu" or "Select directly" button, respectively.
4. Once you’ve selected an application, click [Next].
5. In the next window, you can select to play a sound when the application starts.
6. Click [Finish] to complete the procedure. After this point, whenever you click the appropriate application button, the application to which you assigned it will start.
At the bottom of each application setup page are two selectable options. The first will enable/disable the button when your LifeBook notebook is in Standby mode, and the second will enable/disable the button when your LifeBook notebook is powered off. You can enable/disable either or both of these functions simply by clicking on the option.

When you have finished with Button Setting window, click on **OK**, and the new settings will take effect. You can reconfigure your LifeBook Application Panel as often as you like.

---

If you choose to use the buttons when the notebook is in standby or turned off, they will function even if hit accidentally, and will turn on your notebook even if you are not using the notebook. This could deplete your battery, and you will need to recharge it before using the notebook.
Your Fujitsu LifeBook notebook has three possible power sources: a primary Lithium ion battery, an AC adapter or an optional Auto/Airline adapter.

**CONNECTING THE POWER ADAPTERS**

The AC adapter or optional Auto/Airline adapter provides power for operating your notebook and charging the batteries.

**Connecting the AC Adapter**

1. Plug the DC output cable into the DC power jack of your LifeBook notebook.
2. Plug the AC adapter into an AC electrical outlet. (Figure 3-1)

**Connecting the Optional Auto/Airline Adapter**

1. Plug the DC output cable into the DC power jack on your notebook.
2. Plug the Auto/Airline adapter into the cigarette lighter of an automobile with the ignition key in the On or Accessories position.
   OR
3. Plug the Auto/Airline adapter into the DC power jack on an airplane seat.

**Switching from AC Adapter Power or the Auto/Airline Adapter to Battery Power**

1. Be sure that you have at least one charged battery installed.
2. Remove the AC adapter or the Auto/Airline adapter.

---

The Lithium ion battery is not charged upon purchase. Initially, you will need to connect either the AC adapter or the Auto/Airline adapter to use your notebook.
Display Panel

Your Fujitsu LifeBook notebook contains a display panel that is backlit for easier viewing in bright environments and maintains top resolution through the use of active-matrix technology.

OPENING THE DISPLAY PANEL

1. Press the Display Panel latch to release the locking mechanism, allowing you to raise the display.
2. Lift the display backwards, being careful not to touch the screen, until it is at a comfortable viewing angle. (Figure 3-2)

ADJUSTING DISPLAY PANEL BRIGHTNESS

Once you have turned on your LifeBook notebook, you may want to adjust the brightness level of the screen to a more comfortable viewing level. To adjust the brightness, use the keyboard function keys, as noted below.

Using the Keyboard

Adjusting the brightness using the keyboard changes the setting only temporarily:

- [Fn+F6]: Pressing repeatedly will lower the brightness of your display.
- [Fn+F7]: Pressing repeatedly will increase the brightness of the display.

• When using AC power, your brightness setting is set to its highest level by default. When using battery power, your brightness setting is set to approximately mid-level by default.

• The higher the brightness level, the more power the notebook will consume and the faster your batteries will discharge. For maximum battery life, make sure that the brightness is set as low as possible.

CLOSING THE DISPLAY PANEL

1. Holding the edge of your display panel, pull it forward until it is flush with the body of your LifeBook notebook.
2. Push down until you hear a click. This will engage the locking mechanism and prevent your display panel from opening unexpectedly.
Starting Your LifeBook Notebook

POWER ON
Power/Suspend/Resume Button
The Power/Suspend/Resume button is used to turn on your LifeBook notebook from its off state. Once you have connected your AC adapter or charged the internal Lithium ion battery, you can power on your LifeBook notebook. (See figure 2-3 on page 6 for location)

When you turn on your LifeBook notebook be sure you have a power source. This means that at least one battery is installed and charged, or that the AC or Auto/Airline adapter is connected and has power.

To turn on your LifeBook notebook from its off state, press the Power/Suspend/Resume button, located above the keyboard to the right. When you are done working you can either leave your LifeBook notebook in Standby mode, (See Standby Mode on page 27 for more information), or you can turn it off (See Power Off on page 28 for more information).

Do not carry your LifeBook notebook around with the power on or subject it to shocks or vibration, as you risk damaging your hard disk drive.

When you power on your LifeBook, it will perform a Power On Self Test (POST) to check the internal parts and configuration for correct functionality. If a fault is found, your LifeBook notebook will emit an audio warning and/or an error message will be displayed. (See Power On Self Test Messages on page 55 for more information)

Depending on the nature of the problem, you may be able to continue by starting the operating system or by entering the BIOS setup utility and revising the settings.

After satisfactory completion of the Power On Self Test (POST), your notebook will load your operating system, BOOT SEQUENCE
The procedure for starting up your notebook is called the Bootup sequence and involves your notebook’s BIOS. When your LifeBook notebook is first turned on, the main system memory is empty, and it needs to find instructions to start up your notebook. This information is in the BIOS program. Each time you power up or restart your notebook, it goes through a boot sequence which displays a Fujitsu logo until your operating system is loaded. During booting, your notebook is performing a standard boot sequence including a Power On Self Test (POST). If the sequence is completed without a failure and without a request for the BIOS Setup Utility, the system displays the operating system’s opening screen.

The boot sequence is executed when:
• You turn on the power to your LifeBook notebook.
• You restart your notebook from the Windows Shut Down dialog box.
• The software initiates a system restart. Example: When you install a new application.

HARD DISK DRIVE PASSWORDS
To provide additional data security, you can assign passwords to your hard disk drive. This feature is managed in the system BIOS Setup Utility. See BIOS Setup Utility below for information about accessing the utility.

BIOS SETUP UTILITY
The BIOS Setup Utility is a program that sets up the operating environment for your LifeBook notebook. Your BIOS is set at the factory for normal operating conditions, therefore there is no need to set or change the BIOS’ environment to operate your notebook.

The BIOS Setup Utility configures:
• Device control feature parameters, such as changing I/O addresses and boot devices.
• System Data Security feature parameters, such as passwords.

Entering the BIOS Setup Utility
To enter the BIOS Setup Utility do the following:
1. Turn on or restart your LifeBook notebook.
2. Press the [F2] key when the Fujitsu logo appears on the screen. This will open the main menu of the BIOS Setup Utility with current settings displayed.

Never turn off your LifeBook notebook during the Power On Self Test (POST) or it will cause an error message to be displayed when you turn your LifeBook notebook on the next time. (See Power On Self Test Messages on page 55 for more information)

Remember your passwords. If you set and forget your User and Master hard disk passwords, Fujitsu Computer Systems will not be able to reset it. You may lose data and have to replace your system board or hard disk drive.

When you turn on your LifeBook notebook be sure you have a power source. This means that at least one battery is installed and charged, or that the AC or Auto/Airline adapter is connected and has power.

Do not carry your LifeBook notebook around with the power on or subject it to shocks or vibration, as you risk damaging your hard disk drive.

Never turn off your LifeBook notebook during the Power On Self Test (POST) or it will cause an error message to be displayed when you turn your LifeBook notebook on the next time. (See Power On Self Test Messages on page 55 for more information)
3. Press the [RIGHT ARROW] or [LEFT ARROW] key to scroll through the other setup menus to review or alter the current settings.

**BIOS Guide**
A guide to your notebook’s BIOS is available online. Please visit our service and support website at: http://www.us.fujitsu.com/computers. Once there, select Support, then select Notebooks under User’s Guides. Select LifeBook BIOS Guides from the pull-down menu for your LifeBook series. If you’re unsure of the notebook’s model number, refer to your packing slip.

**BOOTING THE SYSTEM**
We strongly recommend that you not attach any external devices and do not put a DVD/CD in your drive until you have gone through the initial power on sequence.

When you turn on your LifeBook notebook for the first time, it will display a Fujitsu logo on the screen. If you do nothing the system will load the operating system, and then the Windows Welcome will begin.

**STARTING VISTA FOR THE FIRST TIME**
In order to ensure that you receive the most benefits from the Windows operating system, it should be registered the first time you use it.

1. First of all, you will need to read and accept the End User License Agreements (EULAs).

   • If you reject the terms of the license agreement you will be asked to review the license agreement for information on returning Windows or to shut down your LifeBook notebook.
   • You cannot use your notebook until you have accepted the License Agreement. If you stop the process your notebook will return to the beginning of the Windows Welcome Process, even if you shut your notebook down and start it up again.

2. You will be prompted to enter your User Name and Password and you will be given a chance to select an icon for your account.

3. The next screen asks for a Computer Name and allows you to choose a desktop background.

4. You will next see a “Help protect Windows automatically” screen in which the default choice is “Use recommended settings”. The other two choices are “Install important updates only” and “Ask me later”. Select from the three choices.

5. On the next screen set your time and date settings.

6. You will now see the “Select your computer’s current location” screen. Make your selection from Home, Work (Default), and Public location.

7. The “Thank you” screen follows and an offer for free Norton Internet Security™ software is extended. Following are several screens while Windows checks the system performance.

8. Windows will then boot up for the first time.

**REGISTERING WINDOWS WITH MICROSOFT**
1. After Windows has booted up for the first time, the Control Panel Welcome Center will appear. If the Register Windows Online icon is not seen in the window, click on “Show all 14 items”.

2. Click on Register Windows Online and follow the instructions that appear to register your copy of Windows.

**REGISTERING YOUR LIFEBOOK NOTEBOOK WITH FUJITSU**
How do I register my LifeBook notebook?
You can register your LifeBook by going to our website: http://www.us.fujitsu.com/computers
You will need to be set up with an Internet Service Provider (ISP) to register online.

**INSTALLING CLICK ME!**
The first time you boot up your system, you will see a “Primary Settings for the PC” window. This window explains the installations which will be performed by the Click Me! utility. If you click [Execute], Click Me! will begin installing. If after clicking the button you receive a “User Account Control” window, you will be asked for your permission to continue. Click [Yes] to continue. If you cancel the operation, the Click Me! icon will appear on your desktop for later installation.

If your data security settings require it, you may be asked for a password before the BIOS main menu will appear.
Power Management

Your Fujitsu LifeBook notebook has many options and features for conserving battery power. Some of these features are automatic and need no user intervention, such as those for the internal modem. However, others depend on the parameters you set to best suit your operating conditions, such as those for the display brightness. Internal power management for your notebook may be controlled from settings made in your operating system, pre-bundled power management application, or from settings made in BIOS setup utility.

Besides the options available for conserving battery power, there are also some things that you can do to prevent your battery from running down as quickly. For example, you can create an appropriate power saving profile, put your notebook into Standby mode when it is not performing an operation, and you can limit the use of high power devices. As with all mobile, battery powered computers, there is a trade-off between performance and power savings.

POWER/SUSPEND/RESUME BUTTON

When your notebook is active, the Power/Suspend/Resume button can be used to manually put the notebook into Standby mode. Push the Power/Suspend/Resume button when the notebook is active, but not actively accessing anything, and immediately release the button. You will hear two short beeps when the system enters Standby mode.

If your notebook is suspended, pushing the Power/Suspend/Resume button returns your notebook to active operation. You can tell whether the system is in standby by looking at the Power indicator. (See Figure 2-3 on page 6) If the indicator is visible and not flashing, your notebook is fully operational. If the indicator is visible and flashing, your notebook is in Standby mode. If the indicator is not visible, the power is off or your notebook is in Hibernation mode. (See Hibernation Feature)

STANDBY MODE

Standby mode in Windows saves the contents of your system memory during periods of inactivity by maintaining power to critical parts. This mode will turn off the CPU, display, hard drive, and all the other internal components except those necessary to maintain system memory and allow for restarting. Your notebook can be put in Standby mode by:

- Pressing the Power/Suspend/Resume button when your system is turned on (when that is the action selected in the Control Panel).
- Selecting Standby from the Windows Shut Down menu.
- Timing out from lack of activity.
- Allowing the battery to reach the Dead Battery Warning condition.

Your notebook’s system memory typically stores the file on which you are working, open application information, and any other data required to support operations in progress. When you resume operation from Standby mode, your notebook will return to the point where it left off. You must use the Power/Suspend/Resume button to resume operation, and there must be an adequate power source available, or your notebook will not resume.

- If you are running your notebook on battery power, be aware that the battery continues to discharge while your notebook is in Standby mode, though not as fast as when fully operational.
- Disabling the Power/Suspend/Resume button prevents it from being used to put the notebook into Standby or Hibernation (Save-to-Disk) mode. The button resume function cannot be disabled.
- The Standby or Hibernation (Save-to-Disk) mode should not be used with certain PC Cards. Check your PC Card documentation for more information. When PC Cards or external devices are in use, Hibernation (Save-to-Disk) mode cannot return to the exact state prior to suspension, because all of the peripheral devices will be re-initialized when the system restarts.
- If your notebook is actively accessing information when you enter the Standby or Hibernation (Save-to-Disk) mode, changes to open files are not lost. The files are left open and memory is kept active during Standby mode or the memory is transferred to the internal hard drive during Hibernation mode.

The main advantage of using Hibernation (Save-to-Disk) is that power is not required to maintain your data. This is particularly important if you will be leaving your notebook in a suspended state for a prolonged period of time. The drawback of using hibernation mode is that it lengthens the power down and power up sequences and re-initializes peripheral devices.

HIBERNATION (SAVE-TO-DISK) FEATURE

The Hibernation feature saves your system’s memory contents to the hard drive as a part of the Standby/Resume mode. You can enable or disable this feature.

Enable or Disable the Hibernation Feature

The default settings are not enabled. To enable or disable the Hibernation feature follow these easy steps:

1. From the Start menu, select Control Panel.
3. Select "Choose what the power button does" or "Choose what closing the lid does", then make your selections (Do Nothing, Sleep, Hibernate, or Shut Down).

RESTARTING THE SYSTEM
If your system is on and you need to restart it, be sure that you use the following procedure.

1. Click the Start button, and then move the mouse over the right arrow.
2. Select the desired action from the list.

POWER OFF
Before turning off the power, check that the hard drive, optical drive, PC Card, and floppy disk indicators are all Off. (See Figure 2-3 on page 6). If you power-off while accessing a disk or PC Card there is a risk of data loss. To ensure that the notebook shuts down without error, use the Windows shutdown procedure.

Be sure to close all files, exit all applications, and shut down your operating system prior to turning off the power. If files are open when you turn the power off, you will lose any changes that have not been saved, and may cause disk errors.

Using the correct procedure to shut down from Windows allows your notebook to complete its operations and turn off power in the proper sequence to avoid errors. The proper sequence is:

1. Click the Start button, and then click the arrow at the bottom right.
2. From the dropdown menu, select Shut Down (or Sleep or Hibernate).

If you are going to store your notebook for a month or more see Care and Maintenance Section.
4
User-Installable Features
Lithium ion Battery

Your LifeBook notebook has a Lithium ion battery that provides power for operating your notebook when no external power source is available. The battery is durable and long lasting, but should not be exposed to extreme temperatures, high voltages, chemicals or other hazards.

The Lithium ion battery operating time may become shorter if it is used under the following conditions:

- When used at temperatures that exceed a low of 5°C or a high of 35°C. Extreme temperatures not only reduce charging efficiency, but can also cause battery deterioration. The Charging icon on the Status Indicator panel will flash when you try to charge a battery that is outside its operating temperature range. (See Battery Charging Indicator on page 11 for more information)
- When using a high current device such as a modem, Multi-Format DVD Writer, DVD-ROM drive, DVD/CD-RW combo drive, or the hard drive, using the AC adapter will conserve your battery life.

RECHARGING THE BATTERIES

If you want to know the condition of the primary Lithium ion battery, check the Battery Level indicator located on the Status Indicator panel. The indicator changes as the battery level changes.

The Lithium ion battery is recharged internally using the AC adapter or Auto/Airline adapter. To recharge the battery make sure the battery that needs to be charged is installed in your LifeBook notebook and connect the AC or Auto/Airline adapter.

Actual battery life will vary based on screen brightness, applications, features, power management settings, battery condition and other customer preferences. CD-ROM drive, Multi-Format DVD Writer, DVD/CD-RW drive combo, or hard drive usage may also have a significant impact on battery life. The battery charging capacity is reduced as the battery ages. If your battery is running low quickly, you should replace it with a new one.

Under federal, state, or local law it may be illegal to dispose of batteries by putting them in the trash. Please take care of our environment and dispose of batteries properly. Check with your local government authority for details regarding recycling or disposing of old batteries. If you cannot find this information elsewhere, contact your support representative at 1-800-8FUJITSU (1-800-838-5487)

Low Battery State

When the battery is running low, a low battery notification message will appear. If you do not respond to the low battery message, the batteries will continue to discharge until they are too low to operate. When this happens, your notebook will go into Standby mode.

There is no guarantee that your data will be saved once the notebook reaches this point.

- Once the low battery notification message appears, you need to save all your active data and put your LifeBook notebook into Standby mode until you can provide a new power source. You should provide a charged battery, an AC power adapter, or Auto/Airline adapter as soon as possible.
- When you are in Standby mode there must always be at least one power source active. If you remove all power sources while your LifeBook notebook is in Standby mode, any data that has not been saved to the hard drive will be lost.

Make sure that the Battery Charging indicator and the percentage charge is shown inside the Battery Level icon on the Status Indicator Panel.

Using heavy current devices such as Modem or frequent DVD/CD-RW/CD-ROM accesses may prevent charging completely.

Do not have a faulty battery in your LifeBook notebook. It may damage your AC adapter, optional Auto/Airline adapter, another battery or your notebook itself. It may also prevent operation of your notebook by draining all available current into the bad battery.
LifeBook A6000 Series Notebook - Section Four

Dead Battery Suspend mode shows on the Status indicator just like the normal Standby mode. Once your notebook goes into Dead Battery Suspend mode you will be unable to resume operation until you provide a source of power either from an adapter, or a charged battery. Once you have provided power, you will need to press the Power/Suspend/Resume button to resume operation.

In the Dead Battery Suspend mode, your data can be maintained for some time, but if a power source is not provided promptly, the Power indicator will stop flashing and go out, meaning that you have lost the data that was not stored. Once you provide power, you can continue to use your notebook while an adapter is charging the battery.

Shorted Batteries
The Status Indicator panel uses a Battery Level indicator to display the operating level available in that battery. (See figure 2-8 on page 11) If this display is red and blinking, it means the battery is damaged and must be replaced so it does not damage other parts of your LifeBook notebook.

REPLACING THE BATTERY
With the purchase of an additional battery, you can have a fully charged spare to swap with one that is not charged. There are two ways to swap batteries, cold-swapping and hot-swapping:

Cold-swapping Batteries
To cold-swap batteries in your battery bay follow these easy steps: (Figure 4-1)
1. Have a charged battery ready to install.
2. Shut down your notebook and disconnect the AC adapter.
3. Unlock the battery by pushing the two release latches toward the battery pack (Figure 4-1).
4. While pressing the release latches, lift the battery out of the bay.
5. Insert a new battery into the bay, and press it down so that the latches click into place.
6. Plug in the AC adapter and turn the power on.

Hot-swapping Batteries
To hot-swap batteries in your battery bay follow these easy steps: (Figure 4-1)

1. Be sure to plug in an AC Adapter prior to removing the battery. There is no bridge battery present to support the system while the battery is being replaced. If you do not use an AC Adapter you will lose any unsaved files.

   3. Plug an AC Adapter into the system and connect it to a power outlet.

   2. Follow steps 3 through 5 in “Cold Swapping Batteries”.

   If the Lithium ion battery connector is not fully seated, you may not be able to use your notebook or charge your battery.
User Installable Features

Optical Disk Drive

A variety of media is available to use with your Dual-Layer Multi-Format DVD Writer, also known as an "optical disk drive".

DVD-R and DVD-RW discs hold up to 4.7 GB of data (DVD-R discs used with the Dual-Layer Multi-Format DVD writer hold up to 8.5 GB of data.). A DVD-R disc can only be written to once; DVD-RW discs can be written to over and over. DVD-R and DVD-RW discs can be played on most standard DVD players. CD-R and CD-RW discs hold up to 640 MB of data. A CD-R disc can only be written to once; CD-RW discs can be written to over and over.

The Dual-Layer Multi-Format DVD Writer allows you to access movies, software, and audio DVD/CDs as well as to read and write to CD-R, CD-RW, DVD-R, DVD+R, DVD-RW, DVD+RW, and DVD RAM discs.

Media Player Software

The optical disk drive and media player software let you play DVDs and CDs on your notebook. The media player includes controls which allow you to take full advantage of the DVD movie features, as well as standard features like fast forward, fast reverse, pause, etc. With this drive you can also burn onto recordable discs.

LOADING MEDIA ON YOUR DRIVE

To load a disc into your optical drive:

1. Push and release the eject button on the front of the optical drive to open the holder tray. The tray will come out of the LifeBook notebook a short distance.
2. Gently pull the tray out until a media disc can easily be placed in the tray.
3. Place the media into the tray, label side up, with the hole in the center of the disc. Snap the disc onto the raised circle in the center of the tray.
4. Gently push the holder tray back in until you hear a click.

Install your media player software before first using the optical drive. Refer to the readme or help file associated with the software.

Do not operate your optical drive unless your LifeBook notebook is sitting on a flat surface. Using a drive when the system is not level may damage the drive or prevent proper operation.

Prolonged use of the optical drive, such as watching a DVD movie, will substantially reduce your battery life if no other power source is attached.

There may be a protective sheet in the tray from when it was shipped; please make sure it is removed before operating the drive.

You should periodically check the Fujitsu website at http://www.us.fujitsu.com/computers for current updated drivers.

All LifeBook DVD players are set to play DVD titles with region code number 1 which is specified for the North American market. The region number is a regional restriction code defined by the DVD Forum acting on Hollywood requirements. Different region codes are recorded on video DVD titles for publication in different areas of the world. If the regional code of the DVD player does not match the regional codes on the titles, then playback is impossible.

You can change the region code on the DVD player using the Properties menu of the DVD software. Note, however, that you can only change the region code up to four times. After the fourth change, the last region code entered becomes permanent, and cannot be changed.

3. Place the media into the tray, label side up, with the hole in the center of the disc. Snap the disc onto the raised circle in the center of the tray.
4. Gently push the holder tray back in until you hear a click. (Figure 4-3)
REMOVING MEDIA
1. Push and release the eject button on the front of the optical drive. This will stop the drive and the holder tray will come out of the LifeBook notebook a short distance.
2. Gently pull the tray out until the disc can easily be removed from the tray.
3. Carefully remove the media disc from the holder tray.
4. Gently push the holder tray back in until you hear a click.

EMERGENCY MEDIA TRAY RELEASE
If for some reason the eject button fails, you can open the media tray with a paper clip inserted into the eject hole in the far right side of the front of the tray. Straighten one side of a paper clip and push it gently into the hole. The tray will pop out a short distance. (Figure 4-4)

USING THE MEDIA PLAYER SOFTWARE
Depending upon its configuration, your system may not have the media player software pre-installed. If it is not installed, reference the documentation that accompanies the media application.

Starting a DVD Movie
1. Insert the DVD movie into the optical drive of your notebook. If the CD AutoRun feature activates, skip Step 2.
2. The first time you insert a movie into the DVD/CD-RW tray, you will be prompted to select what you want the system to do when discs are inserted (e.g., start automatically or wait for a prompt). Until you make a selection, you will receive the same prompt whenever you insert a disc.

Opening the Media Player Control Panel
With most DVD-ROMs, you have the option of altering how the movie should play and what you wish to view. You can do this by using the media player control panel and the mouse.

1. Click on the [Now Playing] button to open a drop-down menu for options.
2. Make the desired selections from the wide variety of options available.

Using the Media Player Control Panel
The media player software allows you to watch the movie much like a VCR player. You can pause, rewind, fast-forward and stop the movie at any point.

1. To Pause the movie, click the on-screen button.
2. To Rewind the movie, click the button to rewind to a specific portion of the movie, or the button to return to the opening screen.
3. To Fast-forward the movie, click the button to forward to a specific portion of the movie, or the button to jump to the ending credits.
4. To Stop the movie, click the button.

Exiting the Media Player
1. Click the located in the upper right corner of the title bar. This will open a media player dialog box.
2. Click Yes to stop and exit the movie, or No to close the media player dialog box and return to the movie.

USING MEDIA PLAYER ON BATTERY POWER
Since optical drives consume a lot of power, your overall battery life will be significantly shorter when operating the optical drive continuously (such as watching a DVD movie) than during standard operation. Many movies run-times are longer than your LifeBook notebook can support on a single charged battery. If you are watching a
User Installable Features

To Watch a Movie on Battery Power:

1. Have an additional full-charged battery or your AC adapter ready for use.
2. Start watching your DVD movie.
3. When the low battery warning occurs, immediately stop the movie and exit the media player.
4. Power down your LifeBook notebook and replace the discharged battery with an additional fully-charged battery. If you do not have an additional battery, you may attach AC power as soon as you see the low battery warning.
5. Resume your LifeBook notebook by pressing the Suspend button again. This is not required if you attached AC power without entering standby mode.
6. Restart your media player, locate and skip to the chapter of the movie you were last watching.
7. Continue watching your DVD movie.

Some shorter DVD movies may not require you to swap batteries or attach AC power to complete them. However, it is best to be prepared since actual battery life while operating the optical drive cannot be guaranteed.

DVD movie on battery power you may need to swap in an additional, charged battery or attach AC power during the movie to view it in its entirety.

- Prolonged use of the optical drive, such as watching a DVD movie, will greatly reduce your notebook’s battery life.
- Many movie run-times are longer than your system can support on a single battery. If you are watching a DVD movie on battery power you may need to swap in an additional charged battery or attach AC power during the movie to view it in its entirety.
- An additional fully-charged battery is highly recommended if you will be watching DVD movies on battery power. If you do not have an additional battery, you may purchase one either online at: www.shopfujitsu.com or by calling 1-800-FUJITSU (1-800-385-4878).
Memory Stick/Secure Digital/xD Card Slot

Your LifeBook notebook supports the following memory cards, on which you can store and transfer data to and from a variety of digital devices. These cards use flash memory architecture, which means they don’t need a power source to retain data.

- SD Memory Card
- Mini SD Card
- Memory Stick Media
- Memory Stick Select Media
- Memory Stick Duo Media
- Memory Stick PRO Media
- xD-Picture Cards™

Some of the media in the above list may have more features than others.

- An adapter is required for Memory Stick Duo and Mini SD Cards.
- Copyright Protection Technology cannot be used.
- MultiMedia Cards (MMC), Secure MMC, and SD High Capacity (SDHC) Cards are not supported.

Inserting or removing a Memory Stick, SD Card, or xD-Picture Card during your notebook's shutdown or bootup process may damage the card and/or your notebook.

Do not insert a card into a slot if there is water or any other substance on the card as you may permanently damage the card, your LifeBook notebook, or both.

Figure 4-5. inserting an SD Card

Figure 4-6. Memory Stick, Secure Digital, and xD-Picture Cards

Memory Stick is a flash memory technology developed by Sony Electronics. Memory Stick allows you to record, transfer and share digital content, such as digital pictures, movies, music, voice, and computer data and applications.

Secure Digital (SD) Cards are very similar to Memory Sticks, but they are shorter. Like the Memory Stick, SD Cards allow portable storage among a variety of devices, such as cell phones, GPS systems, digital cameras, and PDAs. SD Cards transfer data quickly, with low battery consumption. Like the memory stick, it uses flash memory architecture.

xD-Picture Cards work the same as Memory Sticks and SD Cards, but they are much smaller than either one. xD-Picture Cards are primarily used to store and transfer images with devices such as cell phones.
Secure Digital Card

1. See your Memory Stick, SD Card, or xD-Picture Card manual for instructions on the insertion of your card. Some cards may require that your notebook is off while inserting them.

2. Make sure there is no card currently in the slot. If there is, see Removing a Memory Stick/SD/xD-Picture Card.

3. Insert your card into the slot with the product label facing up.

4. Push the card firmly into the slot until it is seated in the connector.

REMOVING A MEMORY STICK/SD/XD CARD

To remove a Memory Stick, SD Card, or xD-Picture Card, follow these easy steps:

- See your card manual for specific instructions on the removal of your card. Some cards may require your LifeBook notebook to be in Standby Mode or Off while removing them.

- It is good practice to remove devices using the Safely Remove Hardware icon in the system tray at the bottom right of the display.

Push the Memory Stick, SD Card, or xD-Picture Card in until it unlatches. It will then eject from the slot for removal.
Your LifeBook notebook supports Type I and Type II PC Cards and ExpressCards™, which can perform a variety of functions depending on which type of card you insert. You can insert one or two cards at a time, depending on its type. PC Cards should be inserted in the bottom slot, and ExpressCards in the top slot. Some available PC/ExpressCards:

- Gigabit Ethernet local area network (LAN) cards
- S-ATA II cards
- Serial port cards
- IEEE 1394 port cards
- IEEE 802.11n cards

For further information, refer to the instructions supplied with your card(s).

INSERTING PC CARDS

PC Cards are inserted in the PC Card slot (the lower of the two slots). To insert a PC Card, follow these steps:

1. See your PC Card manual for instructions on the insertion of your card. Some cards may require that your notebook is off while inserting them.
2. Make sure there is no PC Card currently in the slot. If there is, see Removing PC Cards.
3. If the eject button is extended, press it until it clicks.
4. Insert the card into the slot with the label facing up.
5. Push the card firmly into the slot until it is seated in the connector.

REMOVING PC CARDS

See your PC Card manual for specific instructions on removing your card. Some cards may require your notebook to be in Standby Mode or Off during removal.

1. Unlock the card from the slot by pressing the eject button associated with the slot in which the card is located. When pressed, the button will pop out.
2. Firmly press the button again until it is flush with the notebook. This will eject the card slightly out of the slot allowing you to remove the card.

You may be required to log on as an Administrator or member of the Administrator's Group to complete this procedure.

- Windows has a shutdown procedure for PC Cards that must be followed before removing a card. (Review your operating system manual for the correct procedure.) It is good practice to remove devices using the Safely Remove Hardware icon in the Notification Area at the bottom right of the display.
- If the dialog box states that the device cannot be removed, you must save all of your open files, close any open applications and shut down your notebook.
- If the PC Card has an external connector and cable, do not pull the cable when removing the card.
**INSERTING EXPRESSCARDS**

There are two different widths ExpressCards: 34 mm and 54 mm. The connector inside the slot is located on the left-hand side of the slot. If you insert a 34 mm card, align it with the left side of the slot when inserting it. ExpressCards are inserted in the ExpressCard slot (the top slot). (Figure 4-8).

![ExpressCard Slot (top slot only)](image)

To insert an ExpressCard, follow these steps:
1. Make sure there is no ExpressCard currently in the slot. If there is, see Removing ExpressCards.
2. If the eject button is extended, press it in until it clicks.
3. Insert your ExpressCard into the slot with the product label facing up. If you are inserting a 34 mm card, be sure to align it with the left side of the slot when inserting it.
4. Push the card firmly into the slot until it is seated in the connector.

**REMOVING EXPRESSCARDS**

See your ExpressCard manual for specific instructions on removing your card. Some cards may require your notebook to be in Standby Mode or Off during removal.

To remove an ExpressCard, follow these steps:
1. Unlock the card from the slot by pressing the eject button associated with the slot in which the card is located. When pressed, the button will pop out.
2. Firmly press the button again until it is flush with the notebook. This will eject the card slightly out of the slot allowing you to remove the card.

- Inserting or removing an ExpressCard during your notebook’s shutdown or bootup process may damage the card and/or your notebook.
- Do not insert an ExpressCard into a slot if there is water or any other substance on the card as you may permanently damage the card, your notebook, or both.

You may be required to log on as Administrator or a member of the Administrator's Group to complete this procedure. If your computer is connected to a network, network policy settings may also prevent you from completing this procedure.

See your ExpressCard manual for instructions on the insertion of your card. Some cards may require that your notebook is off while inserting them.

To insert an ExpressCard, follow these steps:
1. Make sure there is no ExpressCard currently in the slot. If there is, see Removing ExpressCards.
2. If the eject button is extended, press it in until it clicks.
3. Insert your ExpressCard into the slot with the product label facing up. If you are inserting a 34 mm card, be sure to align it with the left side of the slot when inserting it.
4. Push the card firmly into the slot until it is seated in the connector.

Windows has a shutdown procedure for ExpressCards that must be followed before removing a card. (Review your operating system manual for the correct procedure.) It is good practice to remove devices using the Safely Remove Hardware icon in the Notification Area at the bottom right of the display.

If the dialog box states that the device cannot be removed, you must save all of your open files, close any open applications and shut down your notebook.
LifeBook A6000 Series Notebook - Section Four

Memory Upgrade Module

Your Fujitsu LifeBook notebook comes with high speed Double Data Rate Synchronous Dynamic RAM (DDR2-667 SDRAM) factory installed. The maximum memory capacity is 4 GB (2 GB x 2), but 3.25 GB is the maximum amount that is usable by the operating system. To increase your notebook’s memory capacity, you may install an additional memory upgrade module. The memory upgrade must be a dual-in-line (DIMM) SDRAM module. To ensure 100% compatibility, purchase the SDRAM module only from the Fujitsu web store at www.shopfujitsu.com.

INSTALLING MEMORY UPGRADE MODULES

1. Turn off power to your notebook, remove any power adapter (AC or auto/airline). Remove the battery.
2. Turn the notebook bottom side up, and remove the screw from the memory upgrade module compartment. (Figure 4-9)
3. Remove the cover.
4. Remove the memory upgrade module from the static guarded sleeve.
5. Align the memory upgrade module with the part side up. Align the connector edge of the memory upgrade module with the connector slot in the compartment.
6. Insert the memory upgrade module at a 45° angle. Press the connector edge of the module firmly down and into the connector until it lodges under the retaining clip. You will hear a click when it is properly in place. (Figure 4-10)
7. Replace the cover and reinstall the screw.

REMOVING A MEMORY UPGRADE MODULE

1. Perform steps 1 through 4 of Installing a Memory Upgrade Module.
2. Pull the clips sideways away from each side of the memory upgrade module at the same time.
3. While holding the clips out, remove the module from the slot by lifting it up and pulling towards the side of your notebook. (Figure 4-11)

! Do not remove any screws from the memory upgrade module compartment except the ones specifically shown in the directions for installing and removing the memory upgrade module.

! The memory upgrade module can be severely damaged by electrostatic discharge (ESD). To minimize the risk, observe the following precautions:
- Before handling a memory module, touch a grounded metal object to discharge static electricity built up in your body.
- When installing or removing a memory module, hold it by the edge so as not to touch any contacts or chips. Be careful not to touch any internal computer terminals or components; the oil from your fingers could cause a short to the components.
- Be sure to power down your system before adding or removing memory modules. Even if the system is in hibernate or standby states, data could be lost or the memory could be damaged if power is still available to the system.

! The memory upgrade module is not something you readily remove from your notebook. Once it is installed, you can leave it in place unless you want to change system memory capacity.

The memory upgrade module is something you readily remove from your notebook. Once it is installed, you can leave it in place unless you want to change system memory capacity.

The memory upgrade module is not something you readily remove from your notebook. Once it is installed, you can leave it in place unless you want to change system memory capacity.

The memory upgrade module is not something you readily remove from your notebook. Once it is installed, you can leave it in place unless you want to change system memory capacity.

The memory upgrade module is not something you readily remove from your notebook. Once it is installed, you can leave it in place unless you want to change system memory capacity.

The memory upgrade module is not something you readily remove from your notebook. Once it is installed, you can leave it in place unless you want to change system memory capacity.
4. Store the memory upgrade module in a static guarded sleeve.
5. Replace the cover and reinstall the screw.

**CHECKING THE MEMORY CAPACITY**

Once you have changed the system memory capacity by replacing the installed module with a larger one, be sure to check that your notebook has recognized the change.

Check the memory capacity by clicking [Start] -> Control Panel, then double-clicking the System icon. The amount of memory is displayed on the main System window.

There may be a variation between the actual memory size and what is displayed. This is due to the fact that your system uses a video graphics chip which dynamically allocates system memory to accelerate graphics performance. Up to 256 MB of memory (when system memory is 1 GB) or 384 MB (when system memory is 2 GB) is dynamically shared on an as-needed basis using Dynamic Video Memory Technology (DVMT).

If the total memory displayed is incorrect, check that your memory upgrade module is properly installed. (If the module is properly installed and the capacity is still not correctly recognized, see Troubleshooting on page 47.)
Device Ports

Your Fujitsu LifeBook notebook comes equipped with multiple ports to which you can connect external devices including: disk drives, keyboards, modems, printers, etc.

MODEM (RJ-11) TELEPHONE JACK

The modem (RJ-11) telephone jack is used for an internal modem. To connect the telephone cable follow these easy steps:

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.
3. Plug the other end of the telephone cable into a telephone outlet. (Figure 4-12)

The modem sound is deactivated by default, to activate modem sound follow these easy steps:

1. Right click on the Speaker icon in your system tray.
2. Select Open Volume.
3. Select Option/Properties.
4. Under “Show the following volume controls”, click on Phone and click OK.
5. Uncheck the Mute box under Phone Balance.

INTERNAL LAN (RJ-45) JACK

The internal LAN (RJ-45) jack is used for a Gigabit (10Base-T/100Base-Tx/1000Base-T) Ethernet LAN connection. You may need to configure your notebook to work with your particular network. (Please refer to your network administrator for information on your network configuration.) To connect the LAN cable follow these easy steps:

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated. (Figure 4-13)
3. Plug the other end of the cable into a LAN outlet.

UNIVERSAL SERIAL BUS PORTS

There are five USB 2.0 ports on this system (four on the back and one on the side). The Universal Serial Bus 2.0 ports (USB) allow you to connect USB devices such as external game pads, pointing devices, keyboards and/or speakers.

In order to connect a USB device follow these steps:

1. Align the connector with the port opening. (Figure 4-14)
2. Push the connector into the port until it is seated.

Due to the ongoing changes in USB technology and standards, not all USB devices and/or drivers are guaranteed to work.
IEEE 1394 PORT

The 4-pin 1394 port allows you to connect digital devices that are compliant with IEEE 1394 standard. The IEEE 1394 standard is easy to use, connect, and disconnect. This port can allow up to 400 Mbps transfer rate. A third-party application may be required to operate your digital device with the 1394 port.

In order to connect a 1394 device, follow these steps:

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

HEADPHONE/LINE-OUT JACK

The headphone/line-out jack allows you to connect headphones or powered external speakers to your notebook. Your headphones or speakers must be equipped with a 1/8” (3.5 mm) stereo mini-plug. In order to connect headphones or speakers follow these easy steps:

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

MICROPHONE/LINE-IN JACK

The microphone/line-in jack allows you to connect an external mono microphone. Your microphone must be equipped with a 1/8” (3.5 mm) mono mini-plug in order to fit into the microphone jack of your notebook. In order to connect a microphone follow these easy steps:

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

S-VIDEO OUT PORT

The S-Video port allows you to connect and use directly any S-Video device, such as a VCR or television. The S-Video standard provides for a higher quality picture than NTSC or PAL. To connect an S-Video device, follow these steps:

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

EXTERNAL VIDEO PORT

The external video port allows you to connect an external monitor or LCD projector. In order to connect an external device follow these easy steps:

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.
3. Tighten the two hold-down screws, located on each end of the connector.

Pressing the [Fn] + [F10] keys allows you to change your selection of where to send your display video. Each time you press the key combination, you will step to the next choice. The choices, in order, are: built-in display panel only, both built-in display panel and external monitor or external monitor only.
5 Troubleshooting
Troubleshooting

There may be occasions when you encounter simple setup or operating problems that you can solve on the spot, or problems with peripheral devices that can be solved by replacing the device. The information in this section helps you isolate and resolve some of these straightforward issues and identify failures that require service.

IDENTIFYING THE PROBLEM

If you encounter a problem, go through the following procedure before pursuing complex troubleshooting:

1. Turn off your LifeBook notebook.
2. Make sure the AC adapter is plugged into your notebook and to an active AC power source.
3. Make sure that any card inserted in the PC Card slot is seated properly. You can also remove the card from the slot, thus eliminating it as a possible cause of failure.
4. Make sure that any devices connected to the external connectors are plugged in properly. You can also disconnect such devices, thus eliminating them as possible causes of failure.
5. Turn on your notebook. Make sure it has been off at least 10 seconds before you turn it back on.
6. Go through the boot sequence.
7. If the problem has not been resolved, refer to the Troubleshooting Table, that follows, for more detailed troubleshooting information.
8. If you have tried the solutions suggested in the Troubleshooting Table without success, contact your support representative:
   - Toll free: 1-800-8Fujitsu (1-800-838-5487)
   - E-mail: 8fujitsu@us.fujitsu.com
   - Website: http://www.us.fujitsu.com/computers.
   Before you place the call, you should have the following information ready so that the customer support representative can provide you with the fastest possible solution:
   - Product name
   - Product configuration number
   - Product serial number
   - Purchase date
   - Conditions under which the problem occurred
   - Any error messages that have occurred
   - Type of device connected, if any

See the Configuration Label on the bottom of your notebook for configuration and serial numbers. (See figure 2-7 on page 10 for location)

SPECIFIC PROBLEMS

Using the Troubleshooting Table

When you have problems with your LifeBook notebook, try to find the symptoms under the Problem column of the troubleshooting table for the feature giving you difficulty. You will find a description of common causes for that symptom under the column Possible Cause and what, if anything, you can do to correct the condition under Possible Solutions. All possible causes or solutions may not apply to your notebook.
## TROUBLESHOOTING TABLE

## Troubleshooting

### Floppy Disk Drive Problems

- **Problem**: You cannot access the optional external floppy disk drive.
  - **Possible Cause**: You tried to write to a write protected floppy disk.
  - **Possible Solutions**: Eject the floppy disk and set it to write-enable. (See Preparing a Disk for Use on page 36 for more information)

- **Problem**: Floppy disk is not loaded correctly.
  - **Possible Cause**: Floppy disk is not loaded correctly.
  - **Possible Solutions**: Eject floppy disk, check orientation and re-insert. (See Ejecting a Disk on page 36 for more information)

- **Problem**: The floppy disk drive may not be properly installed.
  - **Possible Cause**: Security is set to protect access to floppy disk data.
  - **Possible Solutions**: Remove and reinstall your floppy disk drive.

- **Problem**: The floppy disk drive may not be properly installed.
  - **Possible Cause**: Security is set in the BIOS so your operating system cannot be started without a password.
  - **Possible Solutions**: Verify your password and security settings.

### Hard Drive Problems

- **Problem**: You cannot access your hard drive.
  - **Possible Cause**: The wrong drive designator was used by an application when a bootable disc was used to start the notebook.
  - **Possible Solutions**: Verify drive designator used by application is in use by the operating system. When the operating system is booted from a disc, drive designations are automatically adjusted.

- **Problem**: Security is set in the BIOS so your operating system cannot be started without a password.
  - **Possible Cause**: Security is set in the BIOS so your operating system cannot be started without a password.
  - **Possible Solutions**: Verify your password and security settings.

### Keyboard or Mouse Problems

- **Problem**: The built-in keyboard does not seem to work.
  - **Possible Cause**: The notebook has gone into Standby mode.
  - **Possible Solutions**: Push the Power/Suspend/Resume button.

- **Problem**: Your application has locked out your keyboard.
  - **Possible Cause**: Your operating system software is not setup with correct software driver for that device.
  - **Possible Solutions**: Check your device and operating system documentation and activate the proper driver.

### Memory Problems

- **Problem**: Your Power On screen, or Main menu of the BIOS setup utility information, does not show the correct amount of installed memory.
  - **Possible Cause**: Your memory upgrade module is not properly installed.
  - **Possible Solutions**: Remove and reinstall your memory upgrade module. (See Memory Upgrade Module on page 40 for more information)
### Section Five

#### Modern Problems

- **Messages about modem operation.**
  - **Possible Cause:** Modem operation messages are generated by whichever modem application is in use.
  - **Possible Solutions:** See your application software documentation for additional information.

#### USB Device Problems

- **You have installed a USB device that your LifeBook notebook does not recognize, or the device does not seem to work properly.**
  - **Possible Cause:** The device is not properly installed.
  - **Possible Solutions:** Remove and reinstall the device. (See Device Ports on page 42 for more information)

- **The device may have been installed while an application was running, so your notebook is not aware of its installation.**
  - **Possible Solutions:** Close the application and restart your notebook.

- **Your device may not have the correct software driver active.**
  - **Possible Solutions:** See your software documentation and activate the correct driver.

- **You may have the wrong I/O address selected for the device.**
  - **Possible Solutions:** See your device documentation and software documentation to determine the required I/O address. Change the settings in the BIOS setup utility. (See BIOS Setup Utility on page 25 for more information)

- **Your device and another device are assigned the same I/O address.**
  - **Possible Solutions:** Check all I/O addresses located within the BIOS setup utility and any other installed hardware or software to make sure there are no duplications.

#### PC Card/ExpressCard Problems

- **A card inserted in the card slot does not work or is locking up the system.**
  - **Possible Cause:** The card is not properly inserted.
  - **Possible Solutions:** Remove and re-insert the card. (See PC Cards/ExpressCards™ on page 38 for more information)

- **The card may have been inserted while an application was running, so your notebook is not aware of its insertion.**
  - **Possible Solutions:** Close the application and restart your notebook.

- **Your software may not have the correct software driver active.**
  - **Possible Solutions:** See your software documentation and activate the correct driver.

- **You may have the wrong I/O address selected for your card device.**
  - **Possible Solutions:** See your card documentation to determine the required I/O address. Change the settings in the BIOS. (See BIOS Setup Utility on page 25 for more information)

- **Your card device and another device are assigned the same I/O address.**
  - **Possible Solutions:** Check all I/O addresses located within the BIOS setup utility and any other installed hardware or software to make sure there are no duplications.

#### Power Failures

- **You turn on your LifeBook notebook and nothing seems to happen.**
  - **Possible Cause:** The installed primary battery is completely discharged, there is no modular bay battery installed or there is no Power adapter (AC or Auto/Airline) installed.
  - **Possible Solutions:** Check the Status Indicator Panel to determine the presence and condition of the batteries. (See Status Indicator Panel on page 11 for more information) Install a charged battery or a Power adapter.
### Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>

<tbody>
<tr>
<td>You turn on your LifeBook notebook and nothing seems to happen. (continued)</td>
<td>The primary battery is installed but is faulty.</td>
<td>Use the Status Indicator panel to verify the presence and condition of the batteries. <em>(See Status Indicator Panel on page 11 for more information)</em> If a battery is indicating a short, remove that battery and operate from another power source or replace that battery.</td>
</tr>
<tr>
<td></td>
<td>The battery or batteries are low.</td>
<td>Check the Status Indicator Panel to determine the presence and condition of the batteries. <em>(See Status Indicator Panel on page 11 for more information)</em> Use a power adapter to operate until a battery is charged or install a charged battery.</td>
</tr>
<tr>
<td></td>
<td>The power adapter (AC or auto/airline) is not plugged in properly.</td>
<td>Verify that your adapter is connected correctly. <em>(See Power Sources on page 23 for more information)</em></td>
</tr>
<tr>
<td></td>
<td>The power adapter (AC or auto/airline) has no power from the AC outlet, airplane seat jack, or car cigarette lighter.</td>
<td>Move the AC cord to a different outlet, check for a line switch or tripped circuit breaker for the AC outlet. If you are using an auto/airline adapter in a car make sure the ignition switch is in the On or Accessories position.</td>
</tr>
<tr>
<td></td>
<td>The power adapter (AC or auto/airline) is faulty.</td>
<td>Try a different power adapter or install a charged optional second battery.</td>
</tr>
<tr>
<td>Your LifeBook notebook turns off all by itself.</td>
<td>The power management parameters are set for auto timeouts which are too short for your operating needs.</td>
<td>Press any button on the keyboard, or move the mouse to restore operation. If that fails, push the Power/Suspend/Resume button. Check your power management settings, or close your applications and go to the Power Savings menu of the setup utility to adjust the timeout values to better suit your needs.</td>
</tr>
<tr>
<td></td>
<td>You are operating on battery power only and have ignored a low battery alarm until the batteries are all at the dead battery state and your machine has gone into Dead Battery Suspend mode.</td>
<td>Install a power adapter and then push the Power/Suspend/Resume button. <em>(See Power Sources on page 23 for more information)</em></td>
</tr>
<tr>
<td></td>
<td>You have a battery failure.</td>
<td>Verify the condition of the batteries using the Status Indicator panel, and replace or remove any batteries that are shorted. <em>(See Status Indicator Panel on page 11 for more information)</em></td>
</tr>
<tr>

</tbody>
</table>
The batteries seem to discharge too quickly. You are running an application that uses a lot of power due to frequent hard drive access or DVD/CD-ROM access, use of a modem or LAN PC card.

Use both the primary battery and an optional second battery and/or use a power adapter for this application when at all possible.

The power savings features may be disabled. Check the power management and/or setup utility settings in the Power Savings menu and adjust according to your operating needs.

The brightness is turned all the way up. Turn down the brightness adjustment. The higher the brightness the more power your display uses.

The batteries are very old. Replace the batteries.

The batteries have been exposed to high temperatures. Replace the batteries.

The batteries are too hot or too cold. Restore the notebook to normal operating temperature. Charging icon on the Status Indicator panel will flash when battery is outside of operating range.

Shutdown and Startup Problems

The Power/Suspend/Resume button does not work. Power/Suspend/Resume button is disabled from the Power -> Advanced submenu of the setup utility.

Enable the button from the setup utility.

You did not hold the button in long enough. Hold the button longer. This may need to be a few seconds if your application is preventing the CPU from checking for button pushes.

There may be a conflict with the application software. Close all applications and try the button again.

The system powers up and displays power on information, but fails to load the operating system. The boot sequence settings of the setup utility are not compatible with your configuration.

Set the operating source by pressing the [ESC] key while the Fujitsu logo is on screen or use the [F2] key and enter the setup utility and adjust the source settings from the Boot menu. (See BIOS Setup Utility on page 25 for more information)

You have a secured system requiring a password to load your operating system. Make sure you have the right password. Enter the setup utility and verify the Security settings and modify them as accordingly. (See BIOS Setup Utility on page 25 for more information)

Internal hard drive was not detected. Use the BIOS setup utility or Primary Master submenu, located within the Main menu, to try to auto detect the internal hard drive.

An error message is displayed on the screen during the notebook (boot) sequence. Power On Self Test (POST) has detected a problem. See the Power On Self Test (POST) messages to determine the meaning and severity of the problem. Not all messages are errors; some are simply status indicators. (See Power On Self Test Messages on page 55 for more information)

Your notebook appears to change setup parameters when you start it. BIOS setup changes were not saved when you made them and exited the setup utility returning it to earlier settings. Make sure you select Save Changes And Exit when exiting the BIOS setup utility.

### Problem: The application display uses only a portion of your screen and is surrounded by a dark frame.

**Possible Cause:** You are running an application that does not support 1280 x 800 pixel resolution display and display compression is enabled.

**Possible Solutions:** Display compression gives a clearer but smaller display for applications that do not support 1280 x 800 pixel resolution. You can fill the screen but have less resolution by changing your display compression setting. (See the Video Features submenu, located within the Advanced menu of the BIOS. (See BIOS Setup Utility on page 25 for more information)

### Problem: The Display is dark when on battery power.

**Possible Cause:** The Power Management utility default is set on low brightness to conserve power.

**Possible Solutions:** Press [Fn] + [F7] to increase brightness or double-click on the battery gauge and adjust Power Control under battery settings.

### Problem: You have connected an external monitor and it does not display any information.

**Possible Cause:** Your BIOS setup is not set to enable your external monitor. Your external monitor is not properly installed. Your operating system software is not setup with the correct software driver for that device.

**Possible Solutions:** Toggle the video destination by pressing [Fn]+[F10] together, or check your BIOS setup and enable your external monitor. (See the Video Features submenu, located within the Advanced Menu of the BIOS. (See BIOS Setup Utility on page 25 for more information) Reinstall your device. (See External Video Port on page 43 for more information) Check your device and operating system documentation and activate the proper driver.

### Problem: You have connected an external monitor and it does not come on.

**Possible Cause:** Your external monitor is not compatible with your LifeBook notebook.

**Possible Solutions:** See your monitor documentation and the External Monitor Support portions of the Specifications section. (See Specifications on page 69 for more information)

POWER ON SELF TEST MESSAGES

The following is an alphabetic list of error-and-status messages that Phoenix BIOS and/or your operating system can generate and an explanation of each message. Error messages are marked with an *. If an error message is displayed that is not in this list, write it down and check your operating system documentation both on-screen and in the manual. If you can find no reference to the message and its meaning is not clear, contact your support representative for assistance.

**nnnn Cache SRAM Passed**
Where nnnn is the amount of system cache in kilobytes successfully tested by the Power On Self Test. (This can only appear if you have an SRAM PC Card installed.)

**Diskette drive A error or Diskette drive B error**
Drive A: or B: is present but fails the BIOS Power On Self Test diskette tests. Check to see that the drive is defined with the proper diskette type in the Setup Utility. (See BIOS Setup Utility on page 25 for more information) and that the diskette drive is installed correctly. If the disk drive is properly defined and installed, avoid using it and contact your support representative.

**Extended RAM Failed at offset: nnnn**
Extended memory not working or not configured properly. If you have an installed memory upgrade module, verify that the module is properly installed. If it is properly installed, you may want to check your Windows Setup to be sure it is not using unavailable memory until you can contact your support representative.

**nnnn Extended RAM Passed**
Where nnnn is the amount of memory in kilobytes successfully tested.

**Failing Bits: nnnn The hex number nnnn**
This is a map of the bits at the memory address (in System, Extended, or Shadow memory) which failed the memory test. Each 1 (one) in the map indicates a failed bit. This is a serious fault that may cause you to lose data if you continue. Contact your support representative.

**Fixed Disk x Failure or Fixed Disk Controller Failure (where x = 1-4)**
The fixed disk is not working or not configured properly. This may mean that the hard drive type identified in your setup utility does not agree with the type detected by the Power On Self Test. Run the setup utility to check for the hard drive type settings and correct them if necessary. If the settings are OK and the message appears when you restart the system, there may be a serious fault which might cause you to lose data if you continue. Contact your support representative.

**Incorrect Drive A type**
Type of floppy drive A: not correctly identified in Setup. This means that the floppy disk drive type identified in your setup utility does not agree with the type detected by the Power On Self Test. Run the setup utility to correct the inconsistency.

**Incorrect Drive B type**
Type of floppy drive B: not correctly identified in Setup. This means that the floppy disk drive type identified in your setup utility does not agree with the type detected by the Power On Self Test. Run the setup utility to correct the inconsistency.

**Invalid NVRAM media type**
Problem with NVRAM access. In the unlikely case that you see this message you may have some display problems. You can continue operating but should contact your support representative for more information.

**Keyboard controller error**
The keyboard controller test failed. You may have to replace your keyboard or keyboard controller but may be able to use an external keyboard until then. Contact your support representative.

**Keyboard error**
Keyboard not working. You may have to replace your keyboard or keyboard controller but may be able to use an external keyboard until then. Contact your support representative.

**Keyboard error n**
BIOS discovered a stuck key and displays the scan code for the stuck key. You may have to replace your keyboard but may be able to use an external keyboard until then. Contact your support representative.

**Monitor type does not match CMOS**
Monitor type not correctly identified in Setup. This error probably means your BIOS is corrupted, run the setup utility and set all settings to the default conditions. If you still get this error, contact your support representative.

**Operating system not found**
Operating system cannot be located on either drive A: or drive C: Enter the setup utility and see if both the fixed disk, and drive A: are properly identified and that the boot sequence is set correctly. Unless you have changed your installation greatly, the operating system should be on drive C:. If the setup utility is correctly set, your hard drive may be corrupted.

**Parity Check 1 nnnn**
Parity error found in the system bus. BIOS attempts to locate the address and display it on the screen. If it cannot locate the address, it displays ????. This is a potentially data destroying failure. Contact your support representative.
Parity Check 2 nnnn
Parity error found in the I/O bus. BIOS attempts to locate the address and display it on the screen. If it cannot locate the address, it displays ????. This is a potentially data-destroying failure. Contact your support representative.

Press <F1> to resume, <F2> to SETUP
Displayed after any recoverable error message. Press the [F1] key to continue the boot process or the [F2] key to enter Setup and change any settings.

Previous boot incomplete – Default configuration used
Previous Power On Self Test did not complete successfully. The Power On Self Test will load default values and offer to run Setup. If the previous failure was caused by incorrect values and they are not corrected, the next boot will likely fail also. If using the default settings does not allow you to complete a successful boot sequence, you should turn off the power and contact your support representative.

Real time clock error
Real-time clock fails BIOS test. May require board repair. Contact your support representative.

Shadow RAM Failed at offset: nnnn
Shadow RAM failed at offset nnnn of the 64k block at which the error was detected. You are risking data corruption if you continue. Contact your support representative.

nnnn Shadow RAM Passed
Where nnnn is the amount of shadow RAM in kilobytes successfully tested.

System battery is dead – Replace and run SETUP
The BIOS CMOS RAM memory hold up battery is dead. This is part of your BIOS and is a board mounted battery which requires a support representative to change. You can continue operating but you will have to use setup utility default values or reconfigure your setup utility every time you turn off your notebook. This battery has an expected life of 2 to 3 years.

System BIOS shadowed
System BIOS copied to shadow RAM.

*System CMOS checksum bad – run SETUP
BIOS CMOS RAM has been corrupted or modified incorrectly, perhaps by an application program that changes data stored in BIOS memory. Run Setup and reconfigure the system.

System RAM Failed at offset: nnnn
System memory failed at offset nnnn of in the 64k block at which the error was detected. This means that there is a fault in your built-in memory. If you continue to operate, you risk corrupting your data. Contact your support representative for repairs.

nnnn System RAM Passed
Where nnnn is the amount of system memory in kilobytes successfully tested.

*System timer error
The timer test failed. The main clock that operates the computer is faulty. Requires repair of system board. Contact your support representative for repairs.

UMB upper limit segment address: nnnn
Displays the address of the upper limit of Upper Memory Blocks, indicating released segments of the BIOS memory which may be reclaimed by a virtual memory manager.

Video BIOS shadowed
Video BIOS successfully copied to shadow RAM.

EMERGENCY MEDIA PLAYER
If for some reason the eject button fails, you can open the DVD/CD-ROM tray with a paper clip or similar tool inserted into the eject hole in the far right side of the front of the tray. Straighten one side of a paper clip and push it gently into the hole. The tray will pop out a short distance.

MODEM RESULT CODES
The operating system and application software that is factory installed detects the modem characteristics and provides the necessary command strings to operate the modem. The internal modem operation is controlled by generic AT commands from the operating system and application software. The standard long form result codes may, in some cases, be displayed on your screen to keep you informed of the actions of your modem. The operating system and application software may suppress display of the result codes.

Examples of result codes are:
- OK
- NO CARRIER
- NO DIAL TONE
- CONNECT 53000 (Connection complete at 53,000 bps.)
- ERROR
- FAX
- RING (This means an incoming call.)
- BUSY
- NO ANSWER

When using the internal modem with applications that are not factory installed refer to the application documentation.
RESTORING YOUR PRE-INSTALLED SOFTWARE

The Drivers and Applications Restore (DAR) disc contains sets of device drivers and Fujitsu utilities (in specific directories) that are unique to your computer configuration for use as documented below.

In order to install applications and/or drivers from the DAR disc, you will need to use an optical drive either in your system or attached externally.

If you have access to the internet, visit the Fujitsu website at: http://www.us.fujitsu.com/computers to check for the most current information, drivers and hints on how to perform recovery and system updates.

Reinstalling Individual Drivers and Applications

The DAR disc can be used to selectively reinstall drivers and/or applications that may have been uninstalled or corrupted.

To reinstall drivers and/or applications:
1. Boot up the system and insert the DAR disc after Windows has started. A Fujitsu Installer screen is displayed after the disc is inserted.
2. After reading the License Agreement, click [I agree].
3. A window will appear containing a list of applications, drivers, and utilities that you can install from the DAR disc.
4. In the list, check off all the components you want to install. If you want to install all components, click [Select All]. Clicking [Select All] will select all of the blue-coded components; you must select grey and green components separately.
5. Once you have selected the components you wish to install, click [Install Selected Subsystems]; the components will be installed.
6. After the components are installed, click [OK], then click [Yes] when asked if you want to reboot the system.

RESTORING THE FACTORY IMAGE

The Restore Disc that came with your system contains two utilities:

• The Recovery utility allows you to restore the original contents of the C: drive.
• The Hard Disk Data Delete utility on this disc is used to delete all data on your hard disk and prevent it from being reused. Do not use the Hard Disk Data Delete utility unless you are absolutely certain that you want to erase your entire hard disk, including all partitions.

BOOT Priority Change

Before restoring an image, you must first verify that your system is set up to boot from the DVD drive. To verify/change the boot-up priority (rather than booting-up from the hard drive or an external floppy disk drive), perform the following steps:
1. Start your system and press the [Enter] key or left mouse button when the Fujitsu logo appears. The TrustedCore Menu will appear. Select BIOS Setup from the menu.
2. Using the arrow keys, go to the Boot menu.
3. Arrow down to the Boot Device Priority submenu. Press [Enter].
4. If “Optical Media Drive” or “CD-ROM Drive” is not at the top of the list, arrow down to the drive in the list, and press the space bar (or the + key) to move it to the top of the list. (The system attempts to boot from the devices in the order in which they are listed.) Note that the BIOS for some systems will indicate “CD-ROM Drive”, even when a DVD drive is connected.
5. If you have an external DVD drive connected, proceed to the next step; otherwise, proceed to step 7.

There may be certain free third-party applications pre-installed on your system that are not on the DAR disc. The latest versions of the applications can be downloaded from the third-party’s website.

The components listed are color-coded in terms of their install status. Blue indicates that the component can be installed. Green indicates that the component needs to be installed separately. Grey indicates a component that is already installed; grey items can be reinstated, but prior to installation you will receive a reminder that the component is already installed.

The use of this disc requires that you have a device capable of reading DVDs attached to your system. If you do not have a built-in DVD player, you will need to attach an external player. For more information on available external devices, visit our Web shopping site at: www.shopfujitsu.com

This disc can only be used with the system with which it was purchased.

If you have access to the internet, visit the Fujitsu website at: http://www.us.fujitsu.com/computers to check for the most current information, drivers and hints on how to perform recovery and system updates.

There may be certain free third-party applications pre-installed on your system that are not on the DAR disc. The latest versions of the applications can be downloaded from the third-party’s website.

The components listed are color-coded in terms of their install status. Blue indicates that the component can be installed. Green indicates that the component needs to be installed separately. Grey indicates a component that is already installed; grey items can be reinstated, but prior to installation you will receive a reminder that the component is already installed.

4. In the list, check off all the components you want to install. If you want to install all components, click [Select All]. Clicking [Select All] will select all of the blue-coded components; you must select grey and green components separately.

5. Once you have selected the components you wish to install, click [Install Selected Subsystems]; the components will be installed.
6. After the components are installed, click [OK], then click [Yes] when asked if you want to reboot the system.

RESTORING THE FACTORY IMAGE

The Restore Disc that came with your system contains two utilities:

• The Recovery utility allows you to restore the original contents of the C: drive.
• The Hard Disk Data Delete utility on this disc is used to delete all data on your hard disk and prevent it from being reused. Do not use the Hard Disk Data Delete utility unless you are absolutely certain that you want to erase your entire hard disk, including all partitions.

BOOT Priority Change

Before restoring an image, you must first verify that your system is set up to boot from the DVD drive. To verify/change the boot-up priority (rather than booting-up from the hard drive or an external floppy disk drive), perform the following steps:
1. Start your system and press the [Enter] key or left mouse button when the Fujitsu logo appears. The TrustedCore Menu will appear. Select BIOS Setup from the menu.
2. Using the arrow keys, go to the Boot menu.
3. Arrow down to the Boot Device Priority submenu. Press [Enter].
4. If “Optical Media Drive” or “CD-ROM Drive” is not at the top of the list, arrow down to the drive in the list, and press the space bar (or the + key) to move it to the top of the list. (The system attempts to boot from the devices in the order in which they are listed.) Note that the BIOS for some systems will indicate “CD-ROM Drive”, even when a DVD drive is connected.
5. If you have an external DVD drive connected, proceed to the next step; otherwise, proceed to step 7.

There may be certain free third-party applications pre-installed on your system that are not on the DAR disc. The latest versions of the applications can be downloaded from the third-party’s website.

The components listed are color-coded in terms of their install status. Blue indicates that the component can be installed. Green indicates that the component needs to be installed separately. Grey indicates a component that is already installed; grey items can be reinstated, but prior to installation you will receive a reminder that the component is already installed.

4. In the list, check off all the components you want to install. If you want to install all components, click [Select All]. Clicking [Select All] will select all of the blue-coded components; you must select grey and green components separately.
6. If you have an external DVD drive connected:
   ■ Select the Advanced menu in the BIOS window.
   ■ Scroll down to the USB Features submenu and press the Enter key to open it.
   ■ If Legacy USB Support is disabled, press the space bar to enable it.
   ■ Scroll down to SCSI SubClass Support and press the space bar to enable it.
7. Press [F10], then click on [Yes] to exit the BIOS Setup Utility and return to the boot process.
After you have changed the boot priority, you can restore a backup image when you are booting up.
Procedure
1. Turn on the power to your system.
2. Ensure that you have a device that can read DVDs either installed in your system or attached externally to it.
3. Insert the Restore Disc into the drive tray.
4. Reboot your system.
5. After the system reboots, follow the instructions that appear to either restore your system image or erase all data from your hard disk.

**USING THE SHOCK SENSOR UTILITY**
The Shock Sensor Utility is a feature that helps to protect the computer’s hard disk drive (HDD) from damage due to excessive impact or vibration. The utility is designed to retract the HDD head when an impact is detected, providing some level of protection for the HDD.

**Procedure**
1. Double-click the Shock Sensor Utility icon in the Notification Area at the bottom-right of the screen.
2. Click the [Setting] button. The [Shock Sensor Utility Settings] window appears.

**Action**
Select the action you wish this utility to perform:
- Protect HDD from impact. HDD head is retracted when an impact to the computer is detected.
- Lock computer when carried. Lock the computer when it is being carried.
- Nothing. No action.

**Sensitivity of impact/horizontal move/fall/carry detection**
Adjust the sensitivity of the acceleration sensor based on system motion or impact.
- Ignore periodic vibration. If vibration is periodic, disregard it.
- Ignore mouse click. When the mouse is clicked, sensitivity is temporarily lowered.
- Ignore keyboard action. When the keyboard is used, sensitivity is temporarily lowered.

**Confirm calibration when user logs on**
Select [Confirm calibration when user logs on] if you want to recognize the current orientation as horizontal at logon.

**[Calibrate Now]**
The calibration is executed. Please position the computer as horizontally as possible, then click the [Calibrate Now] button. The current horizontal position will be recognized as the true horizontal by performing the calibration.
3. Click the [OK] or [Cancel] button. The [Setup] window closes.

**Using the Shock Sensor Monitor Window**
Right-click the Shock Sensor Utility icon in the Notification Area at the bottom-right of the screen, and select [Monitor] from the menu. The Monitor window appears.

Note that the Monitor is designed for entertainment, and has no effect on system settings or orientation. To navigate the monitor, use the buttons described below.
Troubleshooting

- **Advance.** Incline the display to the hinge side, or use [Up] key.
- **Back.** Incline the display to the mouse-button side, or use [Down] key.
- **Right.** Incline the display to the right side, or use [Right] key.
- **Left.** Incline the display to the left side, or use [Left] key.
- **Go up.** Use [A] key.
- **Go down.** Use [Z] key.
- **Close.** Use [Esc] key.

AUTOMATICALLY DOWNLOADING DRIVER UPDATES

Your system has a convenient tool called the Fujitsu Driver Update (FDU) utility. With FDU, you can choose to automatically or manually go to the Fujitsu site to check for new updates for your system.

The FDU icon should appear in the system tray at the bottom right of your screen (roll the cursor over the icons to find the correct one). If the FDU icon does not appear in the system tray, it can be started by going to [Start] -> All Programs, and clicking on Fujitsu Driver Update; this will create the icon automatically.

To invoke the FDU menu, right-click on the FDU icon. The menu contains the following items:

- **Check for updates now**
  Allows for manual driver update search. The first time it is used, you are prompted to agree to a user agreement. After clicking on the icon, the FDU automatically connects with the Fujitsu site to check for updates and downloads them. While downloading, the icon has a red bar through it, indicating that it cannot be used while the download is in process. When the update is complete, a message appears informing you of the fact.

- **Enable Automatic Update Notifications**
  Automatically searches for new updates on a regular basis (approximately every 3 days).

- **Show update history**
  Brings up a screen that displays a history of updates that have been made via the FDU.

- **About Fujitsu Driver Update**
  Displays the FDU version number and copyright information

- **Fujitsu Driver Update Readme**
  Displays the FDU readme.
6

Care and Maintenance
Care and Maintenance

Care and Maintenance
If you use your Fujitsu LifeBook notebook carefully, you will increase its life and reliability. This section provides some tips for looking after the notebook and its devices.

Caring for your LifeBook notebook
- The system contains components that can be severely damaged by electrostatic discharge (ESD). To minimize risk to the components, observe the following precautions:
  - Be sure to power down your system before adding or removing system components. Even if the system is in hibernate or standby states, data could be lost or memory could be damaged if power is still available to the system.
  - When installing or removing a memory module, hold it by the edge so as not to touch any contacts or chips. Be careful not to touch any internal computer terminals or components; the oil from your fingers could cause a short to the components.
  - Electrical equipment may be hazardous if misused. Operations of this product or similar products, must always be supervised by an adult. Do not allow children access to the interior of any electrical products and do not permit them to handle any cables.

Cleaning your LifeBook notebook
- Always disconnect the power plug. (Pull the plug, not the cord.)
- Clean your LifeBook notebook with a damp, lint-free cloth. Do not use abrasives or solvents.
- Use a soft cloth to remove dust from the screen. Never use glass cleaners.

Storing your LifeBook notebook
- If storing your notebook for a month or longer, turn your LifeBook notebook off, fully charge the battery, then remove and store all Lithium ion batteries.
- Store your notebook and batteries separately. If you store your LifeBook with a battery installed, the battery will discharge, and battery life will be reduced. In addition, a faulty battery might damage your LifeBook.
- Store your Fujitsu LifeBook in a cool, dry location. Temperatures should remain between 13ºF (-25ºC) and 140ºF (60ºC).

Caring for the Optional Point and Write Pad
- The stylus should not be used to tap on the display; it has no effect on the display, and could cause damage to the screen if so used.
- Use the stylus gently on the pad so as not to damage the stylus or pad. Little pressure is required for the stylus to work effectively.
LifeBook A6000 Series Notebook - Section Six

- Be careful not to leave the stylus on the keyboard or palm rest when closing the display.

Traveling with your LifeBook notebook

- Do not transport your notebook while it is turned on.
- It is recommended that you carry your notebook with you while traveling, rather than checking it in as baggage.
- Always bring your System Recovery CD that came with your notebook when you travel. If you experience system software problems while traveling, you may need it to correct any problems.
- Never put your notebook through a metal detector. Have your notebook hand-inspected by security personnel. You can however, put your notebook through a properly tuned X-ray machine. To avoid problems, place your notebook close to the entrance of the machine and remove it as soon as possible or have your notebook hand-inspected by security personnel. Security officials may require you to turn your notebook on. Make sure you have a charged battery on hand.
- Take the necessary plug adapters if you’re traveling overseas. Check the following diagram to determine which plug adapter you’ll need or ask your travel agent.

### BATTERIES

Caring for your Batteries

- Always handle batteries carefully.
- Do not short-circuit the battery terminals (that is, do not touch both terminals with a metal object). Do not carry loose batteries in a pocket or purse where they may mix with coins, keys, or other metal objects. Doing so may cause an explosion or fire.
- Do not drop, puncture, disassemble, mutilate or incinerate the battery.
- Recharge batteries only as described in this manual and only in ventilated areas.
- Do not leave batteries in hot locations for more than a day or two. Intense heat can shorten battery life.
- Do not leave a battery in storage for longer than 6 months without recharging it.

Increasing Battery Life

- Power your LifeBook notebook through the AC or optional auto/airline adapter whenever possible.
- If your notebook is running on battery power all day, connect it to the AC adapter overnight to recharge the battery.
- Keep brightness to the lowest level comfortable.
- Set the power management for maximum battery life.
- Put your notebook in Standby mode when it is turned on and you are not actually using it.
- Limit your media drive access.
- Disable the Media Player auto insert notification function.
- Always use fully charged batteries.
- Eject PC Cards and ExpressCards when not in use.

FLOPPY DISKS AND DRIVES

Caring for your Floppy Disks

Note that the external floppy disk drive is an optional device.

- Avoid using the floppy disks in damp and dusty locations.
- Never store a floppy disk near a magnet or magnetic field.
- Do not use a pencil or an eraser on a disk or disk label.
- Avoid storing the floppy disks in extremely hot or cold locations, or in locations subject to severe temperature changes. Store at temperatures between 50º F (10ºC) and 125ºF (52ºC).
- Do not touch the exposed part of the disk behind the metal shutter.
- Never use the floppy disk drive with any liquid, metal, or other foreign matter inside the floppy disk drive or disk.
- Never disassemble your floppy disk drive.
MEDIA CARE
Caring for your Media (DVD/CD/CD-R)
Media discs are precision devices and will function reliably if given reasonable care.
- Always store your media disc in its case when it is not in use.
- Always handle discs by the edges and avoid touching the surface.
- Avoid storing any media discs in extreme temperatures.
- Do not bend media discs or set heavy objects on them.
- Do not spill liquids on media discs.
- Do not scratch media discs.
- Do not get dust on media discs.
- Never write on the label surface with a ballpoint pen or pencil. Always use a felt pen.
- If a media disc is subjected to a sudden change in temperature, cold to warm condensation may form on the surface. Wipe the moisture off with a clean, soft, lint-free cloth and let it dry at room temperature. DO NOT use a hair dryer or heater to dry media discs.
- If a disc is dirty, use only a DVD/CD cleaner or wipe it with a clean, soft, lint-free cloth starting from the inner edge and wiping to the outer edge.

Caring for your Optical Drive
Your optical drive is durable but you must treat it with care. Please pay attention to the following points:
- The drive rotates the compact disc at a very high speed. Do not carry it around or subject it to shock or vibration with the power on.
- Avoid using or storing the drive where it will be exposed to extreme temperatures.
- Avoid using or storing the drive where it is damp or dusty.
- Avoid using or storing the drive near magnets or devices that generate strong magnetic fields.
- Avoid using or storing the drive where it will be subjected to shock or vibration.
- Do not disassemble or dismantle the optical drive.
- Use of a commercially available lens cleaner is recommended for regular maintenance of your drive.

PC CARDS/EXPRESSCARDS
Caring for your Cards
PC Cards and ExpressCards are durable, but you must treat them with care. The documentation supplied with your card will provide specific information, but you should pay attention to the following points:
- To keep out dust and dirt, store cards in their protective sleeves when they are not installed in your LifeBook notebook.
- Avoid prolonged exposure to direct sunlight or excessive heat.
- Keep the cards dry.
- Do not flex or bend the cards, and do not place heavy objects on top of them.
- Do not force cards into the slot.
- Avoid dropping cards, or subjecting them to excessive vibration.
7
System Specifications
Specifications

This section provides the hardware and environmental specifications for your Fujitsu LifeBook notebook. Specifications of particular configurations will vary.

CONFIGURATION LABEL

There is a configuration label located on the bottom of your LifeBook notebook. (See Figure 2-7 on page 10 for location.) This label contains specific information regarding the options you’ve chosen for your notebook. Following is an example label and information on how to read your own configuration label.

**MICROPROCESSOR**

Intel® Core™ 2 Duo processor (to determine the processor speed, right-click My Computer, select Properties, then select the General tab.)

**CHIPSET**

Mobile Intel GM965 Express Chipset with ICH8M (enhanced) supporting Intel Active Management Technology

**MEMORY**

**System Memory**
- DDR2 667 MHz SDRAM dual-channel memory module.
- Two DIMM slots; upgradeable to 4 GB of total memory (2 GB x 2).

**Turbo Memory**
Depending upon the particular system and configuration, support for 1 GB of Intel Turbo Memory may be available. Turbo Memory acts as a memory cache to allow faster boot time and improved system performance when loading frequently used applications.

**Cache Memory**
Depending upon the system processor, cache memory is either 2 MB or 4 MB cache on-die

**VIDEO**

- Built-in color flat-panel TFT active matrix LCD display with simultaneous display capability
- **Video Color and Resolution**
  - 15.4" Crystal View WXGA:
    - Internal: 1280 x 800 pixel resolution, 16M colors
    - External: 1600 x 1200 pixel resolution, 16M colors
  - Simultaneous Video: Max. 1280 x 800 pixel resolution, 16M colors
  - Video RAM: 256 MB (for systems with 1 GB of system memory) or 384 MB (for systems with 2 GB of system memory) of shared memory using Dynamic Video Memory Technology (DVMT). Dynamically responds to application requirements and allocates the proper amount of memory for optimal graphics and performance.

**AUDIO**

- Realtek codec ALC262
- **Headphones**:
  - Stereo headphone/line-out jack, 3.5 mm, 1 Vrms or less, minimum impedance 32 Ohms
- **Microphone**:
  - Stereo microphone/line-in jack, 3.5 mm, 100 mVrms or less, minimum impedance 1.5K Ohms
- Two built-in stereo speakers, 20 mm diameter

**MASS STORAGE DEVICE OPTIONS**

- **Hard Drive**:
  - 120 GB, 100 GB, or 80 GB (5400 rpm, S-ATA 150, 2.5", 9.5 mm, protected by smart Shock Sensor technology on main PCB)
- **Dual-Layer Multi-Format DVD Writer**:
  - modular 8x DVD-R (4x Dual-layer DVD-R), 6x DVD-RW, 8x DVD+R (4x Dual-layer DVD+R), 8x DVD+RW, 5x DVD+R, 8x DVD-R, 24x CD-R, 10xW/16xR CD-RW, 24x CD-R0M

**FEATURES**

- **Integrated Pointing Device**
  - Touchpad pointing device with fingerprint sensor that can also be used for scroll function.
  - Optional Point and Write Pad with active stylus input
Communications
Modem: Internal V.90 standard 56K fax/modem (ITU V.90, 56K data, 14.4K fax)
Gigabit LAN: Internal Marvell 88E8055 wired 10Base-T/100Base-Tx/1000Base-T Ethernet LAN
Wireless LAN:
- Intel Wireless WiFi Link 4965AGN, or,
- Integrated Intel PRO/Wireless 3945ABG, Wi-Fi-compliant
- Bluetooth device for wireless personal area network communication (controlled by WLAN On/Off switch)

LifeBook Application Panel
The Application Launcher/Volume buttons on your LifeBook notebook default to the following applications:

<table>
<thead>
<tr>
<th>Button Label</th>
<th>Default Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>My Home</td>
<td>Default Browser</td>
</tr>
<tr>
<td>Web Search</td>
<td><a href="http://www.google.com">www.google.com</a></td>
</tr>
<tr>
<td>A</td>
<td>Notepad</td>
</tr>
<tr>
<td>B</td>
<td>Calculator</td>
</tr>
<tr>
<td>C</td>
<td>Unassigned</td>
</tr>
<tr>
<td>Volume -</td>
<td>Volume Down</td>
</tr>
<tr>
<td>Volume +</td>
<td>Volume Up</td>
</tr>
</tbody>
</table>

Table 7-1 Application Launcher Defaults

Thief Prevention Lock
Lock slot for use with security restraint systems

DEVICE PORTS
On the LifeBook notebook:
- PC Card slot for one Type I or Type II card: PCMCIA Standard 2.1 with CardBus support
- ExpressCard slot for one ExpressCard
- SD/SDHC Memory Stick/SD Card slot
- One 15-pin D-SUB connector for VGA external monitor (see Display specifications)
- Five USB 2.0 (Universal Serial Bus) connectors for input/output devices
- One IEEE 1394 (4-pin type) jack
- One 7-pin video out jack
- One modular modem (RI-11) connector
- One LAN (RJ-45) connector
- One stereo headphone/line-out jack
- One stereo microphone/line-in jack
- Wireless LAN antenna with pre-installed on/off switch
- Bluetooth module with antenna (uses WLAN on/off switch)

KEYBOARD
Built-in keyboard with all functions of 101 key PS/2 compatible keyboards.
- Total number of keys: 84
- Function keys: F1 through F12
- Feature extension key: Fn
- Two Windows keys: one Start key, one application key
- Key pitch: 19 mm
- Key stroke: 2.7 mm
- Built-in Touchpad pointing device with left and right buttons and scroll button.
- Built-in Palm Rest
- Spill-resistant design

External Keyboard Support
USB-compatible

External Mouse Support
USB-compatible

POWER
Batteries
Main Lithium ion battery: 6-cell, rechargeable, 10.8 V, 4000 mAh, 43.2 Wh
Optional main Lithium ion battery: rechargeable, 6-cell, 10.8 V, 4000 mAh, 40.6 Wh

AC Adapter
Autosensing 100-240V AC, supplying 19V DC, 4.22A, 80W to the LifeBook notebook, including an AC cable.

Power Management
Conforms to ACPI (Advanced Configuration and Power Interface)

DIMENSIONS AND WEIGHT
Overall Dimensions
Approximately 14.7”(w) x 10.43”(d) x 1.49”(h)
(380 mm x 265 mm x 37.8 mm)

Weight
Approximately 6.06 lbs. (2.75 kg) with battery installed

ENVIRONMENTAL REQUIREMENTS
Temperature
Operating: 41° to 95° F (5° to 35° C)
Non-operating: 5° to 140° F (–15° to 60° C)

Humidity
Operating: 20% to 85%, relative, non-condensing
Non-operating: 8% to 85%, relative, non-condensing

Altitude
Operating: 10,000 feet (3,048 m) maximum

POPULAR ACCESSORIES
For ordering or additional information on Fujitsu accessories, visit our website at: www.shopfujitsu.com or call 1-800-FUJITSU (1-800-385-4878).
PRE-INSTALLED SOFTWARE
Depending on your pre-installed operating system, your Fujitsu LifeBook notebook comes with pre-installed software for playing audio and video files of various formats. In addition there is file transfer software, virus protection software and Power Management software. The following list indicates the pre-installed software associated with your system.

- Adobe Reader
- CyberLink PowerDVD
- CyberLink PowerProducer
- CyberLink MakeDisc (Vista Home Premium only)
- Roxio EasyMedia Creator
- EverNote
- Fujitsu Driver Update utility
- Fujitsu HotKey
- Fujitsu Shock Sensor Utility
- Google Desktop
- Google Picasa
- LifeBook Application Panel
- Microsoft Works 8.5 (on select models)
- OmniPass Fingerprint Recognition Utility
- Symantec Norton Internet Security (90-day free trial)

LEARNING ABOUT YOUR SOFTWARE
Tutorials
All operating systems and most application software have tutorials built into them. We recommend that you step through the tutorial before you use an application.

Manuals
Included with your notebook you will find manuals for your installed operating system and other pre-installed software. Any manuals that are not included, are available online through the help system of the software. We recommend that you review these manuals for general information on the use of these applications.

Adobe Acrobat Reader
The Adobe Acrobat Reader allows you to view, navigate, and print PDF files from across all of the major computing platforms.

CyberLink PowerDVD
PowerDVD from CyberLink is a versatile DVD player software application. PowerDVD provides high-quality video and audio playback on your system.

CyberLink PowerProducer
CyberLink PowerProducer allows you to produce and edit home movies and slideshows on discs.

CyberLink MakeDisc (Vista Home Premium only)
CyberLink MakeDisc allows you to create DVDs and VCDs as well as music CDs and other discs containing video and/or music content.

Roxio Easy Media Creator
Easy Media Creator allows you to easily burn CDs and organize, edit and share digital photos, music, data, and videos.

EverNote
EverNote allows you to easily capture, store and access a variety of documents, such as typed and handwritten memos, webpage excerpts, emails, phone messages, addresses, passwords, sketches, and documents.

Fujitsu Driver Update Utility
The Fujitsu Driver Update (FDU) utility is pre-installed on your system. With FDU, you can choose to automatically or manually go to the Fujitsu site to check for new updates for your system. (See Automatically Downloading Driver Updates on page 59 for more information)

Fujitsu HotKey
Fujitsu HotKey allows you to control the display brightness of your notebook in order to maximize battery life.

Fujitsu Shock Sensor Utility
The Shock Sensor Utility is designed to decrease the risk of damage to your hard disk drive (HDD) in the event of excessive impact or vibration. Shock Sensor promptly parks the hard disk drive read/write head when subjected to a fall or vibration, thus helping to protect data from being damaged. The Shock Sensor Utility can also improve computer security by automatically locking it with a password when it is carried.

Google Desktop
Google Desktop lets you to search the contents of your computer for emails, web history, and files. It also allows you to view news and photos from anywhere on your desktop.

Google Picasa
Google Picasa lets you to search for, locate, move and label all of the photos on your computer.

LifeBook Application Panel Software
Your LifeBook is pre-installed with software utilities that let you operate and configure your LifeBook Application Panel. The Application Panel utilities are found under Start -> Settings -> Control Panel -> Application Panel.

OmniPass Fingerprint Recognition Software
The fingerprint sensor uses Softex OmniPass which provides password management capabilities to Microsoft Windows operating systems. OmniPass lets you use a “master password” for all Windows, applications, and online passwords, and presents a convenient user interface through which you can securely manage passwords, users, and multiple identities for each user.
Norton Internet Security™ from Symantec

Your system is pre-installed with a free 90-day trial version of Symantec’s Norton Internet Security™. Internet Security is designed to protect your notebook from computer viruses. It assists in protection of the data currently on your hard disk from contamination or destruction. The trial version is activated upon acceptance of software license agreement. After 90 days, you must purchase a subscription from Symantec to download the latest definitions. (See online help or manual for more information on how and when to run this program)

Operating System Options

Depending upon your system, one of the following operating system configurations will be installed:

Microsoft Windows Vista Home Premium Edition
With Microsoft Works 8.5 and Microsoft Office 60-day trial (home and Student Edition 2007)

Microsoft Windows Vista Business Edition
With Microsoft Works 8.5 and Microsoft Office Small Business Edition 2007

- Microsoft Works 8.5
Microsoft Works 8.5 is a software suite containing the basic tools to write letters and reports, track family and friends with address books, manage home finances, and create a home inventory.

- Microsoft Office Home and Student Edition 2007
(Optional with Microsoft Windows Vista Home Premium Edition) Microsoft Office Home and Student 2007 is easy-to-use software to make you more productive in a home and/or school environment. Microsoft Office Home and Student 2007 includes Microsoft Word, Excel, PowerPoint, and OneNote.

(Optional with Microsoft Windows Vista Business Edition) Microsoft Office 2007 Small Business Edition is easy-to-use software to help you manage business opportunities more effectively, create marketing materials, manage e-mail, and share information. Microsoft SBE includes Microsoft Word, Excel, Outlook, PowerPoint, Publisher, and Business Contact Manager.
Glossary

AC Adapter
A device which converts the AC voltage from a wall outlet to the DC voltage needed to power your LifeBook notebook.

ACPI
Advanced Configuration and Power Interface

Active-Matrix Display
A type of technology for making flat-panel displays which has a transistor or similar device for every pixel on the screen.

AdHoc
A name of a wireless LAN configuration.
It is a type of communication using wireless cards only. Another type of communication is called Infrastructure (using a wireless card and an access point).

ADSL
Asymmetric Digital Subscriber Line
Technology for transporting high bit-rate services over ordinary phone lines.

AGP
Accelerated Graphics Port
Graphics port specifically designed for graphics-intensive devices, such as video cards and 3D accelerators.

Auto/Airline Adapter
A device which converts the DC voltage from an automobile cigarette lighter or aircraft DC power outlet to the DC voltage needed to power your LifeBook notebook.

BIOS
Basic Input-Output System. A program and set of default parameters stored in ROM which tests and operates your LifeBook notebook when you turn it on until it loads your installed operating system from disk. Information from the BIOS is transferred to the installed operating system to provide it with information on the configuration and status of the hardware.

Bit
An abbreviation for binary digit. A single piece of information which is either a one (1) or a zero (0).

bps
An abbreviation for bits per second. Used to describe data transfer rates.

Boot
To start-up a computer and load its operating system from disk, ROM or other storage media into RAM.

Bus
An electrical circuit which passes data between the CPU and the sub-assemblies inside your LifeBook notebook.

Byte
8 bits of parallel binary information.

Cache Memory
A block of memory built into the micro-processor which is much faster to access than your system RAM and used in specially structured ways to make your overall data handling time faster.

CardBus
A faster, 32-bit version of the PC Card interface which offers performance similar to the 32-bit PCI architecture.

CD-ROM
Compact disk read only memory. This is a form of digital data storage which is read optically with a laser rather than a magnetic head. A typical CD-ROM can contain about 600MB of data and is not subject to heads crashing into the surface and destroying the data when there is a failure nor to wear from reading.

Channel
A radio frequency band used for communication between wireless cards and access points.

CMOS RAM
Complementary metal-oxide semiconductor random access memory. This is a technology for manufacturing random access memory which requires very low levels of power to operate.

Command
An instruction which you give your operating system. Example: run a particular application or format a floppy disk.

Configuration
The combination of hardware and software that makes up your system and how it is allocated for use.

CRT
Cathode Ray Tube. A display device which uses a beam of electronic particles striking a luminescent screen. It produces a visual image by varying the position and intensity of the beam.
Data
The information a system stores and processes.

DC
Direct current. A voltage or current that does not fluctuate periodically with time.

Default Value
A pre-programmed value to be used if you fail to set your own.

DHCP
Dynamic Host Configuration Protocol
A protocol used to automatically acquire parameters required for the communication, such as IP address. The sender of IP address is called a DHCP server, and the receiver is called a DHCP client.

DIMM
Dual-in-line memory module.

Disk
A spinning platter of magnetic data storage media. If the platter is very stiff it is a hard drive, if it is highly flexible it is a floppy disk, if it is a floppy disk in a hard housing with a shutter it is commonly called a diskette.

Disk Drive
The hardware which spins the disk and has the heads and control circuitry for reading and writing the data on the disk.

Diskette
A floppy disk in a hard housing with a shutter.

DMA
Direct Memory Access. Special circuitry for memory to memory transfers of data which do not require CPU action.

DMI
Desktop Management Interface. A standard that provides PC management applications with a common method of locally or remotely querying and configuring PC computer systems, hardware and software components, and peripherals.

DNS
Domain Name System
A function to control the association between the IP address and the name assigned to the computer.
If you do not know the IP address but if you know the computer name, you can still communicate to that computer.

Driver
A computer program which converts application and operating system commands to external devices into the exact form required by a specific brand and model of device in order to produce the desired results from that particular equipment.

DVMT
Dynamic Video Memory Technology
A video memory architecture that increases the efficiency of the motherboard by using innovative memory utilization and direct AGP.

ECP
Extended Capability Port. A set of standards for high speed data communication and interconnection between electronic devices.

Encryption Key (Network Key)
Data encryption key used to encrypt message text and for computing message integrity checks. Data encryption protects data from unauthorized viewing.
This device uses the same encryption key to encode and decode the data, and the identical encryption key is required between the sender and receiver.

ESD
Electrostatic Discharge. The sudden discharge of electricity from a static charge which has built-up slowly. Example: the shock you get from a doorknob or the sparks you get from brushing hair on a dry day.

Extended Memory
All memory more than the 640KB recognized as system memory.

FCC
Federal Communication Commission.

GB
Gigabyte.

Hard drive
A spinning platter of magnetic data storage media where the platter is very stiff.

I/O
Input/Output. Data entering and leaving your notebook in electronic form.
I/O Port
The connector and associated control circuits for data entering and leaving your notebook in electronic form.

IDE
Intelligent Drive Electronics. A type of control interface for a hard drive which is inside the hard drive unit.

Infrastructure
A name of a wireless LAN configuration. This type of communication uses an access point. Another type of communication is called AdHoc.

IP Address
An identifier for a computer or device on a TCP/IP network. Networks using the TCP/IP protocol route messages based on the IP address of the destination. The format of an IP address is a 32-bit numeric address written as four numbers separated by periods. Each number can be zero to 255. For example, 1.160.10.240 could be an IP address.

Within an isolated network, you can assign IP addresses at random as long as each one is unique. However, connecting a private network to the Internet requires using registered IP addresses (called Internet addresses) to avoid duplicates.

The four numbers in an IP address are used in different ways to identify a particular network and a host on that network. Three regional Internet registries -- ARIN, RIPE NCC and APNIC -- assign Internet addresses from the following three classes.

Class A - supports 16 million hosts on each of 126 networks
Class B - supports 65,000 hosts on each of 16,000 networks
Class C - supports 254 hosts on each of 2 million networks

The number of unassigned Internet addresses is running out, so a new classless scheme called CIDR is gradually replacing the system based on classes A, B, and C and is tied to adoption of IPv6. (credit: webopedia.com)

IR
An abbreviation for infrared.

IRQ
Interrupt Request. An acronym for the hardware signal to the CPU that an external event has occurred which needs to be processed.

KB
Kilobyte.

LAN
Local Area Network. An interconnection of computers and peripherals within a single limited geographic location which can pass programs and data amongst themselves.

LCD
Liquid Crystal Display. A type of display which makes images by controlling the orientation of crystals in a crystalline liquid.

Lithium ion Battery
A type of rechargeable battery which has a high power-time life for its size and is not subject to the memory effect as Nickel Cadmium batteries.

MAC Address
Media Access Control Address
A unique physical address of a network card. For Ethernet, the first three bytes are used as the vendor code, controlled and assigned by IEEE. The remaining three bytes are controlled by each vendor (preventing overlap), therefore, every Ethernet card is given a unique physical address in the world, being assigned with a different address from other cards. For Ethernet, frames are sent and received based on this address.

MB
Megabyte.

Megahertz
1,000,000 cycles per second.

Memory
A repository for data and applications which is readily accessible to your LifeBook notebook’s CPU.

MHz
Megahertz.

Modem
A contraction for MOdulator-DEModulator. The equipment which connects a computer or other data terminal to a communication line.

Monaural
A system using one channel to process sound from all sources.

MTU
Maximum Transmission Unit
The maximum data size that can be transferred at a time through the Internet or other networks. You can set a smaller MTU size to obtain successful communication, if you have difficulty transferring data due to the fact that the maximum size is too large.
**NTSC**
National TV Standards Commission. The standard for TV broadcast and reception for the USA.

**Operating System**
A group of control programs that convert application commands, including driver programs, into the exact form required by a specific brand and model of microprocessor in order to produce the desired results from that particular equipment.

**Partition**
A block of space on a hard drive which is set aside and made to appear to the operating system as if it were a separate disk, and addressed by the operating system accordingly.

**PCI**
Peripheral Component Interconnect
Self-configuring PC local bus. Designed by Intel, PCI has gained wide acceptance as a standard bus design.

**PCMCIA**
PCMCIA is a trademark of the Personal Computer Memory Card International Association. The Personal Computer Memory Card International Association is an organization that sets standards for add-in cards for personal computers.

**Periperal Device**
A piece of equipment which performs a specific function associated with but not integral to a computer. Examples: a printer, a modem, a CD-ROM.

**Pitch (keyboard)**
The distance between the centers of the letter keys of a keyboard.

**Pixel**
The smallest element of a display, a dot of color on your display screen. The more pixels per area the clearer your image will appear.

**POST**
Power On Self Test. A program which is part of the BIOS which checks the configuration and operating condition of your hardware whenever power is applied to your notebook. Status and error messages may be displayed before the operating system is loaded. If the self test detects failures that are so serious that operation can not continue, the operating system will not be loaded.

**PPPoE**
Point to Point Protocol over Ethernet.
A protocol for Ethernet, using a Point-to-Point Protocol (PPP), which is used for connection on the phone line.

**Program**
An integrated set of coded commands to your computer telling your hardware what to do and how and when to do it.

**Protocol**
Procedures and rules used to send and receive data between computers.
- Method of sending and receiving data
- Process used to handle communication errors

Conditions required for communication are organized in procedures for correct transfer of information.

**RAM**
Random Access Memory. A hardware component of your LifeBook notebook that holds binary information (both program and data) as long as it has the proper power applied to it.

**RAM Module**
A printed circuit card with memory and associated circuitry which allows the user to add additional memory to the computer without special tools.

**Reset**
The act of reloading the operating system. A reset erases all information stored in RAM.

**Restart**
See Reset.

**Resume**
To proceed after interruption. In your notebook this refers to returning to active operation after having been in one of the suspension states.

**ROM**
Read Only Memory. A form of memory in which information is stored by physically altering the material. Data stored in this way can not be changed by your notebook and does not require power to maintain it.

**SDRAM**
Synchronous Dynamic Random Access Memory.
**SRAM**
Static random access memory. A specific technology of making RAM which does not require periodic data refreshing.

**SSID**
Service Set Identifier
Specifies which network you are joining. Some systems allow you to specify any SSID as an option so you can join any network.

**Standby**
To make inoperative for a period of time. Your LifeBook notebook uses various suspension states to reduce power consumption and prolong the charge of your battery.

**Status Indicator**
A display which reports the condition of some portion of your hardware. On your LifeBook notebook this is an LCD screen just above the keyboard.

**Stereo (audio)**
A system using two channels to process sound from two different sources.

**SVGA**
Super VGA.

**S-Video**
Super Video. A component video system for driving a TV or computer monitor.

**System Clock**
An oscillator of fixed precise frequency which synchronizes the operation of the system and is counted to provide time of day and date.

**TCP/IP**
Transmission Control Protocol/Internet Protocol. A standard Internet protocol that is most widely used.

**TFT**
Thin Film Transistor – A technology for flat display panels which uses a thin film matrix of transistors to control each pixel of the display screen individually.

**UL**
Underwriters Laboratories – An independent organization that tests and certifies the electrical safety of devices.

**USB**
Universal Serial Bus. Standard that allows you to simultaneously connect up to 127 USB devices such as game pads, pointing devices, printers, and keyboards to your computer.

**VGA**
Video Graphics Array. A video display standard originally introduced by IBM with the PS/2 series of personal computers.

**VRAM**
Video Random Access Memory. A memory dedicated to video display data and control.

**WFMA**
Wired for Management is Intel’s broad-based initiative to reduce the total cost of ownership (TCO) of business computing without sacrificing power and flexibility.

**Wi-Fi Compatible**
Wi-Fi (Wireless Fidelity) Identifies that the product has passed the interoperability test, supplied by the WECA (Wireless Ethernet Compatibility Alliance), which guarantees the interoperability of wireless IEEE 802.11 LAN products. For more information on the Wi-Fi standard, go to the WECA website at: www.wirelessethernet.com.

**WLAN**
Wireless Local Area Network. A wireless interconnection of computers and peripherals within a single limited geographic location which can pass programs and data amongst themselves.

**Write Protect**
Prevent alteration of the binary state of all bits in a storage media. Example: all information on a device such as a floppy diskette; a block of space in a storage media such as a partition of a hard drive; a file or directory of floppy diskette or hard drive.

**XGA**
Extended VGA.
Regulatory Information

NOTICE
Changes or modifications not expressly approved by Fujitsu could void this user’s authority to operate the equipment.

FCC NOTICES
Notice to Users of Radios and Television
These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet that is on a different circuit than the receiver.
- Consult the dealer or an experienced radio/TV technician for help.

Shielded interconnect cables must be employed with this equipment to ensure compliance with the pertinent RF emission limits governing this device.

Notice to Users of the US Telephone Network
This equipment complies with Part 68 of the FCC rules, and the requirements adopted by ACTA. On the bottom of this equipment is a label that contains, among other information, the FCC registration number and ringer equivalence number (REN) for this equipment; or a product identifier in the format US:AAAEQ##TXXXX. If requested, this information or number must be provided to the telephone company.

If trouble is experienced with this equipment, for repair or warranty information, please refer to the manual or contact Fujitsu Computer Systems Corporation, Customer Service. If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved.

The equipment cannot be used on public coin service provided by the telephone company. Connection to party line service is subject to state tariffs. (Contact the state public utility commission, public service commission or corporation commission for information).

If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this computer does not disable your alarm equipment. If you have any questions about what will disable alarm equipment, consult your telephone company or a qualified installer.

The Telephone Consumer Protection Act of 1991 makes it unlawful for any person to use a computer or other electronic device to send any message via a telephone fax machine unless such message clearly contains in a margin at the top or bottom of each transmitted page or on the first page of the transmission, the date and time it is sent and an identification of the business or other entity, or other individual sending the message and the telephone number of the sending machine or such business, other entity, or individual.
DOC (INDUSTRY CANADA) NOTICES

Notice to Users of Radios and Television
This Class B digital apparatus meets all requirements of Canadian Interference-Causing Equipment Regulations.

CET appareil numérique de la classe B respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

Notice to Users of the Canadian Telephone Network
NOTICE: This equipment meets the applicable Industry Canada Terminal Equipment Technical Specifications. This is confirmed by the registration number. The abbreviation, IC, before the registration number signifies that registration was performed based on a Declaration of Conformity indicating that Industry Canada technical specifications were met. It does not imply that Industry Canada approved the equipment.

Before connecting this equipment to a telephone line the user should ensure that it is permissible to connect this equipment to the local telecommunication facilities. The user should be aware that compliance with the certification standards does not prevent service degradation in some situations.

Repairs to telecommunication equipment should be made by a Canadian authorized maintenance facility. Any repairs or alterations not expressly approved by Fujitsu or any equipment failures may give the telecommunication company cause to request the user to disconnect the equipment from the telephone line.

NOTICE: The Ringer Equivalence Number (REN) for this terminal equipment is 0.1B. The REN assigned to each terminal equipment provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed five.

For safety, users should ensure that the electrical ground of the power utility, the telephone lines and the metallic water pipes are connected together. Users should NOT attempt to make such connections themselves but should contact the appropriate electric inspection authority or electrician. This may be particularly important in rural areas.
Please note the following regulatory information related to the wireless LAN device.

Regulatory Notes and Statements

Wireless LAN, Health and Authorization for use

Radio frequency electromagnetic energy is emitted from Wireless LAN devices. The energy levels of these emissions, however, are far much less than the electromagnetic energy emissions from wireless devices such as mobile phones. Wireless LAN devices are safe for use by consumers because they operate within the guidelines found in radio frequency safety standards and recommendations. The use of Wireless LAN devices may be restricted in some situations or environments, such as:

- On board an airplane, or
- In an explosive environment, or
- In situations where the interference risk to other devices or services is perceived or identified as harmful.

In cases in which the policy regarding use of Wireless LAN devices in specific environments is not clear (e.g., airports, hospitals, chemical/oil/gas industrial plants, private buildings), obtain authorization to use these devices prior to operating the equipment.

Regulatory Information/Disclaimers

Installation and use of this Wireless LAN device must be in strict accordance with the instructions included in the user documentation provided with the product. Any changes or modifications made to this device that are not expressly approved by the manufacturer may void the user’s authority to operate the equipment. The manufacturer is not responsible for any interference caused by such unauthorized modification, substitution or attachment. The manufacturer and its authorized resellers or distributors will assume no liability for any interference, including interference that may cause undesirable operation.

FCC REGULATORY INFORMATION

This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

FCC Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the distance between the equipment and the receiver.
3. Connect the equipment to an outlet on a circuit different from the one the receiver is connected to.
4. Consult the dealer or an experienced radio/TV technician for help.

FCC Radio Frequency Exposure statement

This device complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the Wireless LAN antenna (located on the top edge of the LCD screen) and your body. The Bluetooth antenna is located on the edge of the right palm rest and is exempt from minimum distance criteria due to its low power. The transmitters in this device must not be co-located or operated in conjunction with any other antenna or transmitter.

Export restrictions

This product or software contains encryption code which may not be exported or transferred from the US or Canada without an approved US Department of Commerce export license. This device complies with Part 15 of FCC Rules, as well as ICES-003 B / NMB-003 B. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesirable operation. Modifications not expressly authorized by Fujitsu Computer Systems Corporation may invalidate the user’s right to operate this equipment.

Canadian Notice

The device for the 5150-5350 MHz band is only for indoor usage to reduce the potential for harmful interference to co-channel mobile satellite systems. The maximum antenna gain of 6 dBi is permitted (for devices in the 5250-5350 MHz and 5470-5525 MHz bands) to comply with the e.i.r.p. limit. In addition, users are cautioned to take note that high power radars are allocated as primary users (meaning they have priority) of 5250-5350 MHz and 5650-5850 MHz and these radars could cause interference and/or damage to LE-LAN devices.
Before Using the Wireless LAN

This manual describes the procedures required to properly set up and configure the integrated Wireless LAN Mini-PCI device (referred to as "WLAN device" in the rest of the manual). Before using the WLAN device, read this manual carefully to ensure it’s correct operation. Keep this manual in a safe place for future reference.

Wireless LAN Device Covered by this Document

This document is applicable to systems containing one of the following WLAN devices:

- Intel PRO/Wireless 3945ABG Network Connection (WM3945ABG)
- Intel Wireless WiFi Link 4965AGN (4965AGN)

Characteristics of the WLAN Device

- The WLAN device is a Mini-PCI card attached to the main board of the mobile computer.
- The WLAN device operates in license-free RF bands, eliminating the need to procure an FCC operating license. The WLAN operates in the 2.4GHz Industrial, Scientific, and Medical (ISM) RF band and the lower, middle, and upper bands of the 5GHz Unlicensed National Information Infrastructure (UNII) bands.
- The Intel PRO/Wireless 3945ABG WLAN device is capable of three operating modes, IEEE802.11a, IEEE802.11b and IEEE802.11g.
- The Intel PRO/Wireless 3945ABGN WLAN device is capable of four operating modes, IEEE802.11a, IEEE802.11b, IEEE802.11g, and IEEE802.11n (draft)
- The WLAN device is Wi-Fi certified and operates at the maximum data rate of 540 Mbps (theoretical) in IEEE802.11n (draft) mode; 54 Mbps in IEEE802.11a or IEEE802.11g mode; and 11 Mbps in IEEE802.11b mode.
- The WLAN device supports the following encryption methods - WEP, TKIP, CKIP, and AES encryption.
- The Wireless LAN device is compliant with the following standards: WPA, WPA2, CCX1.0, CCX2.0, CCX3.0, and CCX4.0.

WIRELESS LAN MODES USING THIS DEVICE

Ad Hoc Mode

(See Figure A-1) "Ad Hoc Mode" refers to a wireless network architecture where wireless network connectivity between multiple computers is established without a central wireless network device, typically known as Access Point(s). Connectivity is accomplished using only client devices in a peer-to-peer fashion. That is why Ad Hoc networks are also known as peer-to-peer networks. Ad Hoc networks are an easy and inexpensive method for establishing network connectivity between multiple computers.

Ad Hoc mode requires that the SSID, network authentication, and encryption key settings are identically configured on all computers in the Ad Hoc network.

Access Point (Infrastructure) Mode

(See Figure A-2) Infrastructure mode refers to a wireless network architecture in which devices communicate with wireless or wired network devices by communicating through an Access Point. In infrastructure mode, wireless devices can communicate with each other or with a wired network. Corporate wireless networks operate in infrastructure mode because they require access to the WLAN in order to access services, devices, and computers (e.g., file servers, printers, databases).
How to Handle This Device

The WLAN device comes pre-installed in your mobile computer. Under normal circumstances, it should not be necessary for you to remove or re-install it. The Operating System that your mobile computer comes with has been pre-configured to support the WLAN device.

- The Intel PRO/Wireless 3945ABG WLAN device supports IEEE802.11a, IEEE802.11b and IEEE802.11g.
- Intel Wireless WiFi Link 4965AGN (4965AGN) device supports IEEE802.11a, IEEE802.11b, IEEE802.11g, and IEEE802.11n.
- The WLAN device operates in the 2.4GHz ISM band and the 5 GHz lower, middle, and upper UNII bands.
- Microwave ovens may interfere with the operation of WLAN devices since they operate in the same 2.4GHz frequency range as IEEE802.11b/g/n devices. Interference by microwaves does not occur with IEEE802.11a radio which operates in the 5 GHz RF band.
- Wireless devices that transmit in the 2.4GHz range may interfere with operation of WLAN devices in IEEE802.11b/g/n modes. Symptoms of interference include reduced throughput, intermittent disconnects, and many frame errors. It is HIGHLY recommended that these interfering devices be powered off to ensure proper operation of the WLAN device.

DEACTIVATING THE WLAN DEVICE

Deactivation of the WLAN device may be desired in certain circumstances (to extend battery life) or where certain environments require it (i.e. hospitals, clinics, airplanes, etc.). To deactivate the WLAN device, use the Wireless On/Off Switch.

Deactivation using the Wireless On/Off Switch

The WLAN device can be deactivated quickly and efficiently by sliding the Wireless On/Off Switch to the Off position (to the left). (Figure A-3)

The wireless On/Off Switch has no effect on non-Wireless LAN models.

ACTIVATING THE WLAN DEVICE

Activation of the WLAN device can be accomplished using the same methods as the deactivation process

- Using the Wireless On/Off Switch
- In Windows, by right-clicking the WLAN icon then clicking “Connect to a network”

Figure A-3. Wireless LAN/Bluetooth On/Off Switch

ACTIVATING THE WLAN DEVICE

Activation of the WLAN device can be accomplished using the same methods as the deactivation process:

- Using the Wireless On/Off Switch
- In Windows, by right-clicking the WLAN icon then clicking “Connect to a network”
CONFIGURING THE WIRELESS LAN

The optional WLAN device can be configured to establish wireless network connectivity using the software that is built into Windows Vista. Support for most industry standard security solutions is contained in this software.

Pre-defined parameters will be required for this procedure. Please consult with your network administrator for these parameters:

1. Click the Start button, then select Control Panel.
2. If the Control Panel is not in Classic View, select Classic View from the left panel. Double-click the Network and Sharing Center icon.
3. Select “Manage wireless networks” from the left panel.
4. Click on the [Add] button.
5. Depending upon what type of connection you would like to make, make a selection. For an infrastructure network, select “Manually create a network profile.” For ad hoc network, select “Create an ad hoc network.”
6. Enter the required information. It may be necessary to consult with your network administrator for some of the information.
7. In the event you require assistance, go to the Network and Sharing Center window (Start -> Control Panel -> Network and Sharing Center), and type in relevant keywords in the Search box.

CONNECTING TO A NETWORK

After you have configured your computer, you can connect to an active network by performing the following steps:

1. Click on the WLAN icon in the system tray.
2. Select “connect to a network.”
   - Select a network from the list that appears, and click the [Connect] button.
## Troubleshooting the WLAN

### Troubleshooting

Causes and countermeasures for troubles you may encounter while using your wireless LAN are described in the following table.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| Unavailable network connection                    | Incorrect network name (SSID) or network key                                  | Ad hoc connection: verify that the network names (SSID's) and network keys (WEP) of all computers to be connected have been configured correctly. SSID's and WEP key values must be identical on each machine.  
Access Point (Infrastructure) connection: set the network name (SSID) and network key to the same values as those of the access point.  
Set the Network Authentication value identically to that of the Access Point. Please consult your network administrator for this value, if necessary. |
| Weak received signal strength and/or link quality  | Ad hoc connection: Retry connection after shortening the distance to the destination computer or removing any obstacles for better sight.  
Access Point (Infrastructure) connection: Retry connection after shortening the distance to the access point or removing any obstacles for better sight. |                                                                                  |
| The WLAN device has been deactivated or disabled   | Verify that the wireless switch is turned On.                                 |                                                                                  |
| The computer to be connected is turned off         | Verify that the computer to be connected is turned ON.                        |                                                                                  |
| RF interference from Access Points or other wireless networks | The use of identical or overlapping RF channels can cause interference with the operation of the WLAN device. Change the channel of your Access Point to a channel that does not overlap with the interfering device. |                                                                                  |
| Wireless network authentication has failed         | Re-check your Network Authentication, Encryption, and Security settings. Incorrectly configured security settings such as an incorrectly typed WEP key, a mis-configured LEAP username, or an incorrectly chosen authentication method will cause the LAN device to associate but not authenticate to the wireless network. |                                                                                  |
| Incorrectly configured network settings            | Re-check the configuration of your network settings.                          |                                                                                  |
| Incorrect IP address configuration                 | This only applies to networks using static IP addresses. Please contact your network administrator for the correct settings. |                                                                                  |
Wireless LAN Glossary

GLOSSARY

Access point
Wireless network device used to bridge wireless and wired network traffic.

Ad Hoc Mode
Ad Hoc Mode refers to a wireless network architecture where wireless network connectivity between multiple computers is established without a central wireless network device, typically known as Access Points. Connectivity is accomplished using only client devices in a peer-to-peer fashion. For details, refer to “Ad hoc connection” on page 86.

Channel
Range of narrow-band frequencies used by the WLAN device to transmit data. IEEE802.11b/g - 11 channels, 22 MHz wide channels.

DHCP (Dynamic Host Configuration Protocol)
A protocol that provides a means to dynamically allocate IP addresses to computers on a local area network.

DNS (Domain Name System)
A data query service that provides a mechanism with which to translate host names into Internet addresses.

IEEE802.11a
Wireless LAN standard that supports a maximum data rate of 54 Mbps. 802.11a devices operate in the 5 GHz lower and middle UNII bands.

IEEE802.11b
Wireless LAN standard that supports a maximum data rate of 11 Mbps. 802.11b devices operate in the 2.4 GHz ISM band.

IEEE802.11g
Wireless LAN standard that supports a maximum data rate of 54 Mbps. 802.11g devices operate in the 2.4 GHz ISM band.

IEEE802.11n
WLAN Standard still in Draft form (Draft 2.0) as of the date of this document’s publication. Final ratification is expected around April 2008. A maximum data rate of 540 Mbps (theoretical) is supported with an actual data rate of 200 Mbps. 802.11n devices operate at either 2.4GHz or 5GHz.

IP address
The logical 32-bit host address defined by the Internet Protocol that uniquely identifies a computer on a network. The IP address is usually expressed in dotted decimal notation.

LAN (Local Area Network)
A LAN or Local Area Network is a computer network (or data communications network) which is confined to a limited geographical area.

MAC address (Media Access Control Address)
A MAC address (also called an Ethernet address or IEEE MAC address) is the 48-bit address (typically written as twelve hexadecimal digits, 0 through 9 and A through F, or as six hexadecimal numbers separated by periods or colons, e.g., 00:00:00:00:00:00) which identify uniquely a computer that has an Ethernet interface.

MTU (Maximum Transmission Unit)
The maximum size of data which can be transmitted at one time in networks including the Internet. In an environment whose maximum size of data is too large to correctly receive data, normal communications can be restored by setting the size of MTU to a smaller value.

Network key
Data that is used for encrypting data in data communication. The personal computer uses the same network key both for data encryption and decryption, therefore, it is necessary to set the same network key as the other side of communication.

Network name (SSID: Service Set Identifier)
When a wireless LAN network is configured, grouping is performed to avoid interference or data theft. This grouping is performed with “Network name (SSID)”. In order to improve security, the network key is set allowing no communication unless “Network name (SSID)” coincides with the network key.

Open system authentication
Null authentication method specified in the 802.11 standard that performs no authentication checks on a wireless client before allowing it to associate.

PPPoE (Point to Point Protocol over Ethernet)
A method of allowing the authentication protocol adopted in telephone line connection (PPP) to be used over an Ethernet.

Protocol
A procedure or rule of delivering data among computers. Ordered data communication is allowed by making all conditions required for communication including the method of data transmission/reception and action upon communication errors into procedures.
Shared key authentication

802.11 network authentication method in which the AP sends the client device a challenge text packet that the client must then encrypt with the correct WEP key and return to the AP. If the client has the wrong key or no key, authentication will fail and the client will not be allowed to associate with the AP. Shared key authentication is not considered secure, because a hacker who detects both the clear-text challenge and the same challenge encrypted with a WEP key can decipher the key.

SSID (Service Set Identifier)

Service Set Identifier, a 32-character unique identifier attached to the header of packets sent over a WLAN that acts as a password when a mobile device tries to connect to the BSS. The SSID differentiates one WLAN from another, so all access points and all devices attempting to connect to a specific WLAN must use the same SSID. A device will not be permitted to join the BSS unless it can provide the unique SSID. Because the SSID is broadcast in plain text, it does not supply any security to the network.

Subnet mask

TCP-IP network is controlled by being divided into multiple smaller networks (subnets). IP address consists of the subnet address and the address of each computer. Subnet mask defines how many bits of IP address comprise the subnet address. The same value shall be set among computers communicating with each other.

TCP/IP (Transmission Control Protocol/Internet Protocol)

A standard protocol of the Internet.

Wi-Fi

Wi-Fi (Wireless Fidelity) is a set of standards for wireless local area networks (WLAN) based on the IEEE 802.11 specifications. Certified products can use the official Wi-Fi logo, which indicates that the product is interoperable with any other product also showing that logo.
IP address information

ABOUT IP ADDRESSES

IP addressing is much more complicated than can be briefly explained in this document. You are advised to consult with your network administrator for additional information.

If IP address is unknown, set IP address as follows:
If you have an access point (DHCP server) on the network, set the IP address as follows:
[Obtain an IP address automatically]

A DHCP server is a server that automatically assigns IP addresses to computers or other devices in the network. There is no DHCP server for the AdHoc network.

If the IP address is already assigned to the computer in the network, ask the network administrator to check the IP address to be set for the computer.
If no access point is found in the network:
An IP address is expressed with four values in the range between 1 and 255.
Set the each computer as follows: The value in parentheses is a subnet mask.
<Example>
Computer A: 192.168.100.2 (255.255.255.0)
Computer B: 192.168.100.3 (255.255.255.0)
Computer C: 192.168.100.4 (255.255.255.0)

Computer X: 192.168.100.254 (255.255.255.0)

</table>

* "Wi-Fi based" indicates that the interconnectivity test of the organization which guarantees the interconnectivity of wireless LAN (Wi-Fi Alliance) has been passed.

** The communication ranges shown above will increase or decrease depending on factors such as number of walls, reflective material, or interference from external RF sources.

*** Encryption with network key (WEP) is performed using the above number of bits, however, users can set 40 bits/104 bits after subtracting the fixed length of 24 bits.

**** Depending on practical environments, the allowable number of computers to be connected may be decreased.
Using the Bluetooth Device

WHAT IS BLUETOOTH?
The integrated Bluetooth module (EYTF3CSFT) is an optional device available for Fujitsu mobile computers. Bluetooth technology is designed as a short-range wireless link between mobile devices, such as laptop computers, phones, printers, and cameras. Bluetooth technology is used to create Personal Area Networks (PANs) between devices in short-range of each other.

WHERE TO FIND INFORMATION ABOUT BLUETOOTH
The Bluetooth module contains a robust Help user's guide to assist you in learning about operation of the Bluetooth device.

To access the Help file, click [Start] -> All Programs, and click on Bluetooth, then select User's Guide.

For additional information about Bluetooth Technology, visit the Bluetooth Website at: www.bluetooth.com.

FCC Radiation Exposure Statement
This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

The transmitters in this device must not be co-located or operated in conjunction with any other antenna or transmitter.

Canadian Notice
To prevent radio interference to the licensed service, this device is intended to be operated indoors and away from windows to provide maximum shielding. Equipment (or its transmit antenna) that is installed outdoors is subject to licensing.

Warranty
Users are not authorized to modify this product. Any modifications invalidate the warranty.

This equipment may not be modified, altered, or changed in any way without signed written permission from Fujitsu. Unauthorized modification will void the equipment authorization from the FCC and Industry Canada and the warranty.

The Wireless LAN/Bluetooth On/Off Switch will power off both the wireless LAN and Bluetooth devices at the same time. To enable or disable either one of the devices individually, perform the following steps:

1. Slide the Wireless LAN/Bluetooth on/ off switch to On position.
2. In the Control Panel, click the button associated with Bluetooth and/or Wireless LAN Status to enable or disable the individual devices.
3. Click [OK].
Appendix B
Using the Fingerprint Sensor
**Using the Fingerprint Sensor**

**INTRODUCING THE FINGERPRINT SENSOR DEVICE**

Your system has a fingerprint sensor device below the Touchpad, between the left and right buttons. It also serves as a scrolling sensor. (Figure B-1)

![Figure B-1 Fingerprint sensor](image)

With a fingerprint sensor, you can avoid having to enter a username and password every time you want to:

- Log onto Windows
- Resume from standby mode
- Cancel a password-protected screen saver
- Log into websites that require a username and password

After you have “enrolled” - or registered - your fingerprint, you can simply swipe your fingertip over the sensor for the system to recognize you.

The fingerprint sensor uses Softex OmniPass which provides password management capabilities to Microsoft Windows operating systems. OmniPass enables you to use a “master password” for all Windows, applications, and online passwords.

OmniPass also requires users to authenticate themselves using the fingerprint sensor before granting access to the Windows desktop. This device results in a secure authentication system for restricting access to your computer, applications, websites, and other password-protected resources.

OmniPass presents a convenient graphical user interface, through which you can securely manage passwords, users, and multiple identities for each user.

**GETTING STARTED**

This section guides you through the preparation of your system for the OmniPass fingerprint recognition application. You will be led through the OmniPass installation process. You will also be led through the procedure of enrolling your first user into OmniPass.

**INSTALLING OMNIPASS**

If OmniPass has already been installed on your system, skip this section and go directly to “User Enrollment” on page 98. You can determine whether OmniPass has already been installed by checking to see if the following are present:

- The presence of the gold key-shaped OmniPass icon in the notification area at the bottom right of the screen.
- The presence of the Softex program group in the Programs group of the Start menu

**System Requirements**

The OmniPass application requires space on your hard drive; it also requires specific Operating Systems (OS's). The minimum requirements are as follows:

- Windows XP Home Edition or Windows XP Professional operating system
- At least 35 MB available hard disk space

**Installing the OmniPass Application**

If OmniPass is already installed on your system, go to “User Enrollment” on page 98. Otherwise continue with this section on software installation.

**For installation, OmniPass requires that the user installing OmniPass have administrative privileges to the system. If your current user does not have administrative privileges, log out and then log in with an administrator user before proceeding with OmniPass installation.**

To install OmniPass on your system you must:

1. Insert the installation media for the OmniPass application into the appropriate drive. If you are installing from CD-ROM or DVD-ROM, you must find and launch the OmniPass installation program (setup.exe) from the media.
2. Follow the directions provided in the OmniPass installation program. Specify a location to which you would like OmniPass installed. It is recommended that you NOT install OmniPass in the root directory (e.g. C:).
3. Once OmniPass has completed installation you will be prompted to restart your system. Once your system has rebooted you will be able to use OmniPass. If you choose not to restart immediately after installation, OmniPass will not be available for use until the next reboot.
The installation program automatically places an icon (Softex OmniPass) in the Windows Control Panel as well as a golden key shaped icon in the taskbar.

**Verifying Information about OmniPass**

After you have completed installing OmniPass and restarted your system, you may wish to check the version of OmniPass on your system.

To check the version information of OmniPass:
1. From the Windows Desktop, double-click the key-shaped OmniPass icon in the taskbar (usually located in the lower right corner of the screen), or, the Start button, select Settings, and click Control Panel. Double-click Softex OmniPass in the Control Panel, and the OmniPass Control Center will appear. If it does not appear, then the program is not properly installed, or, the Start button, select Programs, and from the submenu select the Softex program group, from that submenu click OmniPass Control Center.
2. Select the About tab at the top of the OmniPass Control Panel. The About tab window appears with version information about OmniPass.

**Uninstalling OmniPass**

Before you can use any OmniPass features you must first enroll a user into OmniPass.

The Enrollment Wizard will guide you through the process of enrolling a user. Unless you specified otherwise, after OmniPass installation the Enrollment Wizard will launch on Windows login. If you do not see the Enrollment Wizard, you can bring it up by clicking Start on the Windows taskbar, select Programs, select Softex, click OmniPass Enrollment Wizard.

1. Click Enroll to proceed to username and password verification. By default, the OmniPass Enrollment Wizard enters the credentials of the currently logged in Windows user.
2. Enter the password you use to log in to Windows. This will become the "master password" for this OmniPass user. In most cases, the Domain: value will be your Windows computer name. In a corpo-
rate environment, or when accessing corporate resources, the Domain: may not be your Windows computer name. Click [Next] to continue.

3. In this step OmniPass captures your fingerprint. Refer to "Enrolling a Fingerprint" on page 99 for additional information.

4. Next, choose how OmniPass notifies you of various events. We recommend you keep Taskbar Tips on Beginner mode taskbar tips and Audio Tips on at least Prompt with system beeps only until you get accustomed to how OmniPass operates. Click [Next] to proceed with user enrollment. You will then see a Congratulations screen indicating your completion of user enrollment.

5. Click [Done] to exit the OmniPass Enrollment Wizard. You will be asked if you'd like to log in to OmniPass with your newly enrolled user; click [Yes].

Enrolling a Fingerprint

Enrolling a fingerprint will increase the security of your system and streamline the authentication procedure. You enroll fingerprints in the OmniPass Control Center. With an OmniPass user logged in, double-click the notification area OmniPass icon. Select the User Settings tab and click Enrollment under the User Settings area. Click Enroll Authentication Device and authenticate at the authentication prompt to start device enrollment.

1. During initial user enrollment, you will be prompted to select the finger you wish to enroll. Fingers that have already been enrolled will be marked by a green check. The finger you select to enroll at this time will be marked by a red arrow. OmniPass will allow you to re-enroll a finger. If you choose a finger that has already been enrolled and continue enrollment, OmniPass will enroll the fingerprint, overwriting the old fingerprint. Select a finger to enroll and click [Next].

2. It is now time for OmniPass to capture your selected fingerprint. It may take a several capture attempts before OmniPass acquires your fingerprint. Should OmniPass fail to acquire your fingerprint, or if the capture screen times out, click [Back] to restart the fingerprint enrollment process.

Your system has a "swipe" fingerprint sensor. A swipe sensor is small and resembles a skinny elongated rectangle. To capture a fingerprint, gently swipe or pull your fingertip over the sensor (starting at the second knuckle) towards yourself (Figure B-2). Swiping too fast or too slow will result in a failed capture. The Choose Finger screen has a [Practice] button, click it to practice capturing your fingerprint. When you are comfortable with how your fingerprint is captured, proceed to enroll a finger.

3. Once OmniPass has successfully acquired the fingerprint, the Verify Fingerprint screen will automatically appear. To verify your enrolled fingerprint, place your fingertip on the sensor and hold it there as if you were having a fingerprint captured. Successful fingerprint verification will show a green fingerprint in the capture window and the text Verification Successful under the capture window.

USING OMNIPASS

You are now ready to begin using OmniPass. Used regularly, OmniPass will streamline your authentications.

Password Replacement

You will often use the password replacement function. When you go to a restricted access website (e.g., your bank, your web-based email, online auction or payment sites), you are always prompted to enter your login credentials. OmniPass can detect these prompts and you can teach OmniPass your login credentials. The next time you go to that website, you can authenticate with your fingerprint to gain access.

OmniPass Authentication Toolbar

After installing OmniPass and restarting, you will notice a dialog you have not seen before at Windows Logon. This is the OmniPass Authentication Toolbar, and it is displayed whenever the OmniPass authentication system is invoked. The OmniPass authentication system may be invoked frequently: during Windows Logon, during OmniPass Logon, when unlocking your workstation, when resuming from standby or hibernate, when unlocking a password-enabled screensaver, during password replacement for remembered site or application logins, and more. When you see this toolbar, OmniPass is prompting you to authenticate. The Logon Authentication window indicates what OmniPass-restricted function you are attempting. The icons in the lower left (fingerprint and key) show what authentication methods are available to you. Selected authentication methods are highlighted while unselected methods are not. When you click the icon for an unselected authentication method, the authentication prompt associated with that method is displayed.
When prompted to authenticate, you must supply the appropriate credentials: an enrolled finger for the fingerprint capture window or your master password for the master password prompt (the key icon).

Remembering a Password
OmniPass can remember any application, GUI, or password protected resource that has a password prompt.

Using the following procedure, you can store a set of credentials into OmniPass. These credentials will then be linked to your “master password” or fingerprint.

Go to a site that requires a login (username and password), but do not log in yet. At the site login prompt, enter your username and password in the prompted fields, but do not enter the site (do not hit [Enter], [Submit], [OK], or Login). Right-click the OmniPass notification area icon and select Remember Password from the submenu. The Windows arrow cursor will change to a golden key OmniPass cursor. Click this OmniPass cursor in the login prompt area, but do not click the [Login] or [Submit] button.

Associating a Friendly Name
After clicking the OmniPass key cursor near the login prompt, OmniPass will prompt you to enter a “friendly name” for this site. You should enter something that reminds you of the website, the company, or the service you are logging into. In its secure database, OmniPass associates this friendly name with this website.

Additional Settings for Remembering a Site
When OmniPass prompts you to enter a “friendly name” you also have the opportunity to set how OmniPass authenticates you to this site. There are three effective settings for how OmniPass handles a remembered site.

The default setting is Automatically click the “OK” or “Submit” button for this password protected site once the user is authenticated. With this setting, each time you navigate to this site OmniPass will prompt you for your master password or fingerprint authentication device. Once you have authenticated with OmniPass your credentials will be filled in to the site login prompt, but you will have to click the website [OK], [Submit], or [Login] button to gain access to the site.

Less secure is the option to Automatically enter this password protected site when it is activated. Do not prompt for authentication. If you uncheck both boxes in Settings for this Password Site, OmniPass will prompt you for your master password or fingerprint authentication device. Once you have authenticated with OmniPass your credentials will be filled in to the site login prompt, but you will have to click the website [OK], [Submit], or [Login] button to gain access to the site.

Click Finish to complete the remember password procedure. The site location, the credentials to access the site, and the OmniPass authentication settings for the site are now stored in the OmniPass secure database. The OmniPass authentication settings (Settings for this Password Site) can always be changed in Vault Management.

Logging in to a Remembered Site
Whether or not OmniPass prompts you to authenticate when you return to a remembered site is determined by Settings for this Password Site and can be changed in Vault Management.

The following cases are applicable to using OmniPass to login to: Windows, remembered websites, and all other password protected resources.

With Master Password
Once you return to a site you have remembered with OmniPass, you may be presented with a master password prompt. Enter your master password and you will be allowed into the site.

Logging into Windows with a Fingerprint Device
When logging into Windows with a fingerprint device, the fingerprint capture window will now appear next to the Windows Login screen. Place your enrolled finger on the sensor to authenticate. You will be simultaneously logged into Windows and OmniPass. The capture window will also appear if you have used Ctrl-Alt-Delete to lock a system, and the fingerprint device can be used to log back in as stated above.

If a machine is locked and OmniPass detects a different user logging back in with a fingerprint, the first user will be logged out and the second user logged in.
In Windows XP, your login options must be set either for classic login, or for fast user switching and logon screen to be enabled to use your fingerprint to log on to Windows. To change this go to Control Panel, select User Accounts and then click Change the way users log on or off. If your Windows screensaver is password protected, the fingerprint capture window will now appear next to screensaver password dialog during resume. You can authenticate to your screensaver password prompt with your enrolled fingerprint.

**Password Management**

OmniPass provides an interface that lets you manage your passwords. To access it, double-click the OmniPass key in the notification area. Click Vault Management; you will be prompted to authenticate. Once you gain access to Vault Management, click Manage Passwords under Vault Settings. You will see the Manage Passwords interface, with a list of friendly names.

You can view the credentials stored for any remembered website by highlighting the desired resource under Password Protected Dialog and clicking Unmask Values. Should a password be reset, or an account expire, you can remove stored credentials from OmniPass. Highlight the desired resource under Password Protected Dialog and click Delete Page. You will be prompted to confirm the password deletion.

The two check boxes in Manage Passwords govern whether OmniPass prompts you to authenticate or directly logs you into the remembered site.

OmniPass will overwrite an old set of credentials for a website if you attempt to use Remember Password on an already remembered site.

The exception to the above rule is the resetting of your Windows password. If your password is reset in Windows, then the next time you login to Windows, OmniPass will detect the password change and prompt you to “Update” or “Reconfirm” your password with OmniPass. Enter your new Windows password in the prompt(s) and click OK.

**OmniPass User Identities**

Identities allow OmniPass users to have multiple accounts to the same site (e.g., identities allow OmniPass users to have multiple identities). Enter your new Windows password in the field to bring the cursor to it, and you will see the pull-down menu in the Identity field. Click the icon associated with that password protected dialogs that are associated with that identity are shown. You can perform all the functions explained in “Password Management” on page 101.

To add a new identity, click New Identity or double-click Click here to add a new identity. Name the new identity and click [OK], then click [Apply]. You can now switch to the new identity and start remembering passwords.

To delete an identity, highlight the identity you want to delete and click [Delete Identity], then click [Apply].

When you delete an identity, all of its associated remembered sites and password protected dialogs are lost.

To set the default identity, highlight the identity you want as default and click [Set as Default], [Apply] to ensure the settings are saved. If you log in to OmniPass with a fingerprint device, you will automatically be logged in to the default identity for that OmniPass user. You can choose the identity with which you are logging in if you login using “master password”.

**Choosing User Identity during Login**

To choose your identity during login, type your username in the User Name: field. Press [Tab] and see that the Domain: field self-populates. Click the Password: field to bring the cursor to it, and you will see the pull-down menu in the Identity: field. Select the identity you wish to login as and then click OK to login.

**Switch User Identity**

To switch identities at any time, right-click the OmniPass notification area icon and click Switch User Identity from the submenu. The Switch Identity dialog will appear. Select the desired identity then click OK.

**Identities and Password Management**

On the Manage Passwords interface of the Vault Management tab of the OmniPass Control Center, there is a pull-down selection box labeled, Identity. This field lets you choose which identity you are managing passwords for. When you select an identity here, only those password protected dialogs that are associated with that identity are shown. You can perform all the functions explained in "Password Management" on page 101.

**CONFIGURING OMNIPASS**

This section gives an overview of both the Export/Import function and the OmniPass Control Center.

**Exporting and Importing Users**

Using the OmniPass Control Center, you can export and import users in and out of OmniPass. The export process backs up all remembered sites, credentials, and any enrolled fingerprints for an OmniPass user. All OmniPass data for a user is backed up to a single encrypted database file. During the import process, the Windows login of the exported user is required. If the proper credentials cannot be supplied, the user profile will not be imported.
Exporting an OmniPass User Profile

To export a user, open the OmniPass Control Center, and click Import/Export User under Manage Users.

Click Exports an OmniPass user profile. OmniPass will prompt you to authenticate. Upon successful authentication, you must name the OmniPass user profile and decide where to save it. An .opi file is generated, and you should store a copy of it in a safe place.

This .opi file contains all your user-specific OmniPass data, and it is both encrypted and password protected. This user profile does NOT contain any of your encrypted data files.

Importing an OmniPass User Profile

To import an OmniPass user open the OmniPass Control Center, and click Import/Export User under Manage Users. Click Imports a new user into OmniPass and then select OmniPass Import/Export File (.opi) and click Next. OmniPass will then prompt you to browse for the file you had previously exported (.opi file). When you select the .opi file for importation, OmniPass will prompt you for authentication. The credentials that will allow a user profile to be imported are the Windows login credentials of the exported user. They are the credentials that had to be submitted when the user profile was exported. You will need User Name, Password, and Domain.

OmniPass will notify you if the user was successfully imported.

Things to Know Regarding Import/Export

- Assume you export a local Windows User profile from OmniPass. You want to import that profile to another machine that has OmniPass. Before you can import the profile, a Windows user with the same login credentials must be created on the machine importing the profile.

Example: I have a Windows user with the username “Tom” and the password “Sunshine” on my system. I have enrolled Tom into OmniPass and remembered passwords. I want to take all my passwords to a new system. I export Tom’s OmniPass user profile. I go to my new system and using the Control Panel I create a user with the username “Tom” and the password “Sunshine”. I can now successfully import the OmniPass user data to the new system.

- If you export an OmniPass-only user, you can import that user to any computer running OmniPass, provided that a user with that name is not already enrolled in OmniPass.

- If you attempt to import a user profile who has the same name as a user already enrolled in OmniPass, the OmniPass import function will fail.

OMNIPASS CONTROL CENTER

This section will serve to explain functions within the OmniPass Control Center that weren’t explained earlier. You can access the OmniPass Control Center any of three ways:

- Double-click the golden OmniPass key shaped icon in the Windows taskbar (typically in the lower-right corner of the desktop)

- Click the Start button; select the Programs group; select the Softex program group; and click the OmniPass Control Center selection.

- Open the Windows Control Panel (accessible via Start button -> Settings -> Control Panel) and double-click the Softex OmniPass icon.

User Management

The User Management tab has two major interfaces: Add/Remove User and Import/Export User. Import/Export User functionality is documented in “Exporting and Importing Users” on page 101. Add/Remove User functionality is straightforward.

If you click Add a new user to OmniPass you will start the OmniPass Enrollment Wizard. The Enrollment Wizard is documented in “User Enrollment” on page 98.

If you click Remove a user from OmniPass, OmniPass will prompt you to authenticate. Authenticate with the credentials (or enrolled fingerprint) of the user you wish to remove. OmniPass will prompt you to confirm user removal. Click OK to complete user removal.
Removing a user will automatically destroy all OmniPass data associated with that user. All identities and credentials associated with the user will be lost.

If you are sure about removing the user, we encourage you to export the user profile.

User Settings
The User Settings tab has four interfaces: Audio Settings, Taskbar Tips, and Enrollment. User settings allow users to customize OmniPass to suit their individual preferences. Under User Settings (Audio Settings and Taskbar Tips) you can set how OmniPass notifies the user of OmniPass events (e.g., successful login, access denied, etc.). The details of each setting under the Audio Settings and Taskbar Tips interfaces are self-explanatory.

The Enrollment interface allows you to enroll fingerprints. For the procedure to enroll and authentication device refer to Chapter 2.5. To enroll additional fingerprints, click Enroll Authentication Device, and authenticate with OmniPass. Select the fingerprint recognition device as the Select Authentication Device screen (it should already be marked by a green check if you have a fingerprint enrolled) and click Next.

System Settings
The OmniPass Startup Options interface can be found in the System Settings tab. With these options you can specify how your OmniPass Logon is tied to your Windows Logon.

The first option, Automatically log on to OmniPass as the current user, will do just as it says, during Windows login, you will be logged on to OmniPass using your Windows login credentials. If the user logging into Windows was never enrolled into OmniPass, upon login no one will be logged on to OmniPass. This setting is appropriate for an office setting or any setting where no one will be logged on to OmniPass. This setting is the default setting.

With the second option, Manually log on to OmniPass at startup, OmniPass will prompt you to log in once you have logged on to Windows.

With the third option, Do not log on to OmniPass at startup, OmniPass will not prompt for a user to be logged on.

You can manually log on to OmniPass by right-clicking the OmniPass taskbar icon and clicking Log in User from the right-click menu.

TROUBLESHOOTING
You cannot use OmniPass to create Windows users. You must first create the Windows user, and you will need administrative privileges to do that. Once the Windows user is created, you can add that user to OmniPass using the same username and password.

Cannot add Windows users to OmniPass
If you experience difficulties adding a user to OmniPass, you may need to adjust your local security settings. You can do this by going to Start, Control Panel, Administrative Tools, and Local Security Settings. Expand Local Policies, expand Security Options, and double-click Network Access. Sharing and Security Model for Local Accounts. The correct setting should be Classic - Local Users Authenticate as Themselves.

Cannot add a User with a Blank Password to OmniPass
If you experience difficulties adding a user with a blank password to OmniPass, you may need to adjust your local security settings. First attempt the procedure explained in the Cannot add Windows user to OmniPass section. If the difficulties persist, then try the following procedure.

Click Start, Control Panel, Administrative Tools, and Local Security Settings. Expand Local Policies, expand Security Options, and double-click Accounts: Limit local account use of blank passwords to console login only. This setting should be set to Disabled.

Dialog appears after OmniPass authentication during Windows Logon
After installing OmniPass on your system, you can choose to login to Windows using OmniPass. You authenticate with OmniPass (via master password, or an enrolled security device) and OmniPass logs you into Windows. You may, during this OmniPass authentication, see a Login Error dialog box.

This dialog box occurs when OmniPass was unable to log you into Windows with the credentials supplied (username and password). This could happen for any of the following reasons:

- Your Windows password has changed
- Your Windows account has been disabled

If you have difficulties due to the first reason, you will need to update OmniPass with the changed Windows account password. Click Update Password. You’ll be prompted with a dialog to reconfirm your password.

Enter the new password to your Windows user account and click OK. If the error persists, then it is unlikely the problem is due to your Windows user account password changing.
