This user’s guide contains information on using your Wireless Keyboard with your Fujitsu computer. We strongly recommend that you read this guide before using the keyboard, even if you are already familiar with notebook computers and accessories.
Preparing the Wireless Keyboard for Use

To prepare your keyboard for use, you will need to install the two AAA batteries that came with your keyboard.

To Install the Batteries:

Turn your wireless keyboard over and release the battery compartment cover by compressing the tab. Remove the cover, and set it aside. Insert the batteries in the compartment, making sure that the “+” on the batteries corresponds with the “+” mark in the compartment. Replace the cover. (Figure 3)
Range of Operation:
Your wireless keyboard communicates with the infrared (IR) port on the front of your system. The location of the IR port will vary, depending upon your system configuration. In order to communicate effectively with your computer, your
keyboard should be kept within the area in which the signals from the keyboard can be received by your computer. This area is within approximately 3 feet from the port. The effective distance will vary, and is subject to environment, type of use, and other factors.

**Wireless Keyboard Identification Codes**

**Overview of Identification Codes**

When multiple keyboards and computers are used in a small area, it may be necessary to assign an individual identification code to each keyboard/computer pair. Assigning identification codes prevents interference or "cross-talk" between closely situated keyboards and systems.

The identification code assigned to a keyboard/computer pair is temporary. The code is cancelled whenever the computer is turned off, suspended, or reset.

The system will recognize the code of the first keyboard with which it is used after it returns to an active state. Once a new code is recognized, only the coded keyboard will work with the computer, but multiple keyboards with the same identification code can be used with the same computer.

For example, if two keyboards (A and B) are within infrared range of the computer, either can be used when the system is initially reset or suspended. If the identification code for keyboard A is set to "1" and it is used with the computer
first, the computer will recognize “1” as the code. Keyboard B would be disabled unless you enter “1” as its code. If you assign keyboard A the identification code “1” and keyboard B the identification code “2”, then use keyboard B first, the computer will only recognize the keyboard B identification code “2”.

If you remove the batteries from the keyboard and install new batteries (or allow the keyboard capacitor to discharge for at least a minute before reinstalling the old batteries), the code for the keyboard will reset to the default of “7”. At that point, the computer will initially only respond if:

- The computer was responding to code “7” before the batteries were removed, or,
- The keyboard is reset to the code to which the computer was responding before the batteries were removed.

**Entering an Identification Code**

To enter an identification code for your keyboard, perform the following step:

In the following step, press and hold down the keys in the same order as they appear, and leave them depressed until after the code is entered.

```
Press [Fn]+[Left Alt]+[Left Shift]+[ID Code]. Use a single number for the ID Code, between 0 and 7.
```

There is no on-screen indication that the code has been entered.
Changing an Identification Code

Once the code has been set, as detailed in “Entering an Identification Code” on page 5, it can be changed by following the same procedure and substituting a different ID code.

Adjusting the keyboard position

On the bottom of the keyboard, you will find two adjustable feet that raise the rear portion of the keyboard when they are swiveled open. This allows you to adjust the keyboard to a comfortable position.

To change the resting position of the keyboard, swivel the feet away from the bottom of the keyboard. (Figure 4)
Caring for your keyboard

Your wireless keyboard is a durable but sensitive electronic device.

- If you accidentally spill liquid on your keyboard, position it so that the liquid can run out, then let it dry out for 24 hours, or longer, as required.

Failure to properly eliminate the liquid from the keyboard can result in internal short circuit and permanent damage to the keyboard.

- Do not use your keyboard in a wet environment (near a bathtub, swimming pool).
- Avoid exposure to sand, dust and other environmental hazards.
- Do not put heavy or sharp objects on the keyboard.
- Clean your keyboard with a damp lint-free cloth.

Storing your keyboard

- If storing your keyboard for a month or longer, remove and store the batteries.
- Store your keyboard and batteries separately. If you store your keyboard with batteries installed, the batteries will discharge, and battery life will be reduced. In addition, a faulty battery might damage your keyboard.
### Wireless Keyboard Specifications

DECLARATION OF CONFORMITY

according to FCC Part 15

Responsible Party Name: Fujitsu Computer Systems Corporation
Address: 1250 E. Arques Avenue (M/S 122), Sunnyvale, CA 94085
Telephone: (408) 746-6000

Declares that product:

Model Name: Wireless Keyboard FPCKC17A1P

Complies with Part 15 of the FCC Rules.

This device complies with Part 15 of the FCC rules. Operations are subject to the following two conditions:

1) This device must not be allowed to cause harmful interference, (2) This device must accept any interference received, including interference that may cause undesired operation.

Model Names: Wireless Keyboard FPCKC17A1P

Conformance to Directive(s)/Product Standard:

Emissions:

89/336/EEC -
EMC: EN 55024: 1998

Immunity:

EN 61000-4-2, 1995
EN 61000-4-3, 1995
ENV 50204: 1996 RF Immunity, 895-905 MHz
IEC 61000-4-8: 1994-09 Power Frequency

Safety

IEC 60950

Equipment type/Environment: Residential, Commercial, Light Industrial.

We hereby declare that the equipment specified above conforms to the above Directive(s).
FCC Notices

Notice to Users of Radios and Television

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet that is on a different circuit than the receiver.
- Consult the dealer or an experienced radio/TV technician for help.

Shielded interconnect cables must be employed with this equipment to ensure compliance with the pertinent RF emission limits governing this device.

DOC (Industry Canada) Notices

Notice to Users of Radios and Television

This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

CET appareil numérique de la class B respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

Notice to All Users

The Wireless Keyboard can only be operated at a maximum ambient temperature of 40° C (104° F).
