Fujitsu Contact Information

Service and Support
You can contact Fujitsu Service and Support in the following ways:

- Toll free phone: 1-800-Fujitsu (1-800-838-5487)
- Website: "http://solutions.us.fujitsu.com/www/content/support/contact/index.php"

Before you place the call, you should have the following information ready so that the customer support representative can provide you with the fastest possible solution:

- Product name
- Product configuration number
- Product serial number
- Purchase date
- Conditions under which the problem occurred
- Any error messages that have occurred
- Type of device connected, if any

Fujitsu Shopping Online
Please go to "http://www.shopfujitsu.com/store/".

Maintaining Latest Configuration
To ensure that you always have the most current driver updates related to your system, you should occasionally access the Fujitsu Software Download Manager (FSDM) utility. The FSDM utility is available from the Fujitsu Support site. FSDM will allow you to view a list of the most current drivers, utilities, and applications to determine whether you have the latest versions. If you have a Windows 7 or Windows 8/8.1 operating system, you will need to go to the Support Site to download the FSDM Utility: "http://support.fujitsupc.com/CS/Portal/support.do?src=DOWNLOADS".

Limited Warranty
Your LIFEBOOK notebook is backed by a Fujitsu International Limited Warranty. Check the service kit that came with your notebook for the Limited Warranty period and terms and conditions.

Ports and controls

This chapter presents the individual hardware components of your device. It gives an overview of the indicators and connections of the device. Please familiarize yourself with these items before you start to work with the device.

Front

1 = Touchscreen
2 = Webcam
3 = Webcam LED
4 = Ambient light sensor
5 = Speaker
6 = Mechanical mounting for keyboard docking station / keyboard cover / cradle
7 = Docking port
8 = Air inlet
Ports and controls

Left-hand side

1 = DC jack (DC IN, protected by cover)  
2 = ON/OFF button  
3 = Increase volume button  
4 = Decrease volume button  
5 = Shortcut button  
6 = Power-on indicator  
7 = Battery charging indicator

Right-hand side

1 = SIM card slot (format: micro SIM, protected by cover)  
2 = Storage card slot (format: micro SD, protected by cover)  
3 = Micro USB port (protected by cover)  
4 = USB port (USB 3.0, protected by cover)  
5 = Headphones port  
6 = Stylus holder  
7 = Eyelet for stylus cord
Back (2 variants: standard shell and smart card shell)

1 = Fingerprint sensor
2 = Camera light
3 = Webcam
4 = Webcam LED

5 = Screw holes (device-dependent) for securing accessories
6 = SmartCard reader (device dependent)
Important notes

This chapter contains essential safety information which must be followed when working with your Tablet PC. The other notes provide useful information about your Tablet PC.

Safety instructions

Please follow the safety notes provided in the "Safety/Regulations" manual as well as the safety notes given below.

Please pay special attention to the sections in the manual marked with the symbol on the left.

When connecting and disconnecting cables, observe the relevant notes in this operating manual.

Read the information on the ambient conditions in the "Technical data", Page 80 chapter and the information in the "First-time setup of your device", Page 16 chapter before preparing your Tablet PC for use and switching it on for the first time.

When cleaning the device, please observe the relevant notes in the section .

Pay attention to the additional safety notes for devices with radio components provided in the "Safety/Regulations" manual.

This Tablet PC complies with the relevant safety regulations for data processing equipment. If you have questions as to whether you can set up the Tablet PC in the intended environment, please contact your sales outlet or our hotline/service desk.

Additional safety notes for devices with radio components

If a radio component (Wireless LAN, Bluetooth, UMTS/LTE) is integrated in your Tablet PC, you must be sure to observe the following safety precautions when using your Tablet PC:

• Switch off the radio components when you are in an aircraft or driving in a car.
• Switch off the radio components when you are in a hospital, an operating room or near a medical electronics system. The transmitted radio waves can impair the operation of medical devices.
• Switch off the radio components, when you let the device get near flammable gases or into hazardous environments (e.g. gas station, paint stores), as the transmitted radio waves can cause an explosion or a fire.

For further information on how to switch the radio components on and off, refer to "Switching the wireless components on and off", Page 39.
Protecting the display screen

Depending on your device configuration, where applicable your device is not waterproof. In this event, do not pour liquids onto the device and do not wash it with a wet cloth. Do not place items on the top of the display, or damage may occur.

During normal use of the device, small particles from the environment can become embedded in the pen tip and scratch the screen. The warranty does not cover a scratched screen.

Energy saving

If you will not be using your Tablet PC, switch it off. Switch off any connected external devices when they are not in use. If you use the energy-saving functions, the Tablet PC uses less power. If you do this, you will be able to work longer with the Tablet PC before having to recharge the battery.

The energy efficiency is increased and environmental pollution is reduced. You save money and help protect the environment.

Energy saving under Windows

► Make use of the available energy saving functions as described in chapter "Using the energy saving functions", Page 35.

Traveling with your Tablet PC

Please follow the instructions below when traveling with your Tablet PC.
Important notes

Before you travel

► Back up important data stored on your hard disk.
► Switch off the radio component for data security reasons. With data traffic via a wireless connection, it is also possible for unauthorized third parties to receive data.

Information on activating data encryption is provided in the documentation for your radio component.

► If you want to use your Tablet PC during a flight, first check with the airline company whether this is allowed.

When traveling in other countries

► If you are traveling abroad, check that the AC adapter can be operated with the local AC voltage. If this is not the case, obtain the appropriate AC adapter for your Tablet PC. Do not use any other voltage converter!
► Check whether the local AC voltage and the AC cable are compatible. If this is not the case, buy an AC cable that suits the local conditions.
► Enquire with the appropriate government office of the country you will be traveling in as to whether you may there operate the radio component integrated in your Tablet PC (also see ).

Transporting the Tablet PC

Protect the Tablet PC from severe shocks and extreme temperatures (e.g. direct sunlight in a car).

► Do not transport your Tablet PC while it is turned on.
► Carry your Tablet PC with you while traveling, rather than checking it in as baggage.
► Never put your Tablet PC through a metal detector; have it hand-inspected by security personnel. You can however, put your Tablet PC through a properly tuned X-ray machine. To avoid problems, place it close to the entrance of the machine and remove it as soon as possible or have it hand-inspected by security personnel. Security officials may require you to turn your Tablet PC on, so make sure you have a charged battery on hand.

► Switch the Tablet PC off.
► Unplug the AC plug of the AC adapter and all external devices from the power outlets.
► Disconnect the AC adapter cable and the data cables for all external devices.
► To protect against damaging jolts and bumps, use a suitable Tablet PC carrying case to transport your Tablet PC.
Important notes

Storing your Tablet PC

- If storing your Tablet PC for a month or longer, turn it off, fully charge the battery, then remove and store all Lithium Polymer batteries.
- Store your Tablet PC in a cool, dry location. Temperatures should remain between 13°F / -25°C and 140°F / 60°C.
- Store your Tablet PC and batteries separately. If you store your Tablet PC with a battery installed, the battery will discharge, and battery life will be reduced. In addition, a faulty battery might damage your Tablet PC.
- Always power off the Tablet PC before transporting and/or packaging it. After shutting down the Tablet PC, wait until the status led panel indicates power off condition (i.e., no lights are illuminated).
- It is possible that the Tablet PC may not automatically go to power-off or hibernate mode when you close the lid. This situation may occur due to pre-operating system boot password security settings or some other application running on the Tablet PC.
- Attempting to transport the Tablet PC while power is on may damage the Tablet PC due to shock or overheating.

Cleaning the Tablet PC

- Use of incorrect cleaners can result in optical impairment of the LCD and/or damage to the computer. Always refer to the cleaner manufacturer's guidelines and material safety data sheets for proper handling and use of the products.
- Never use ammonia, acidic, or alkaline cleaners or organic chemicals such as paint thinner, acetone or kerosene. It may damage surface finishes and the coating of the LCD screen.
- Never use compressed air for cleaning your computer.
- If your Tablet PC has a Smart Card slot, be very careful to avoid any liquid entering the slot as this can damage the unit.

Cleaning guidelines using recommended off-the-shelf cleaners: Computer exterior

To clean the exterior, use one of the following off-the-shelf products:
- Office Depot® #154-616 b Cleaning Kit
- Meridrew Enterprises Klear Screen® Wipes
- 3M CL563 Cleaner Wipes

After cleaning with one of these products, gently polish with a dry, soft, lint-free cloth until the solution is no longer visible.

Disinfecting STYLISTIC computers

Wipe the surface with a soft cloth wipe and a 50% ethanol solution or use another ethanol-based germicide which has been registered as a hospital disinfectant by the EPA.
First-time setup of your device

Please read the chapter "Important notes", Page 12.

If your device is equipped with a Windows operating system, the necessary hardware drivers and supplied software are already pre-installed.

Before switching it on for the first time, connect the device to the AC voltage using the AC adapter, see "Connecting the AC adapter", Page 17. The AC adapter must remain connected during the whole of the installation process.

A system test is performed when your device is first switched on. Various messages can appear. The display may remain dark for a short time or may flicker.

Please follow the instructions on the screen.

NEVER switch off your device during the first-time setup process.

The battery must be charged if you want to operate your device using the battery.

When used on the move, the built-in battery provides the device with the necessary power. You can increase the operating time by using the available energy-saving functions.

For instructions on how to connect external devices (e.g. mouse, printer) to your Tablet PC, please refer to the operating manual for your device.

Unpacking and checking the device

If you find that damage has occurred during transport, please notify your local sales outlet immediately!

► Unpack all the individual parts.
► Check your device for any visible damage which may have occurred during transportation.

You may need to reuse the packaging in future, for example if you need to transport your device.
Choose a location

Choose a suitable location for the device before setting it up. In doing so, please follow these instructions:

- Never place the device or the AC adapter on a heat-sensitive surface. The surface could be damaged as a result.
- Never place the device on a soft surface (e.g. carpeting, upholstered furniture, bed). This can result in damage caused by overheating.
- The underside of the device heats up during normal operation. Prolonged contact with skin can become unpleasant or even result in burns.
- Place the device on a stable, flat, non-slippery surface. Please note that the rubber feet of the device may mark certain types of delicate surfaces.
- Keep other objects at least 100 mm / 4 inches away from the device and its AC adapter to ensure adequate ventilation.
- Do not expose the device to extreme environmental conditions. Protect the device against dust, humidity and heat.

Connecting the AC adapter

Observe the safety notes in the enclosed "Safety/Regulations" manual.

The supplied AC cable conforms to the requirements of the country in which you purchased your device. Make sure that the AC cable is approved for use in the country in which you intend to use it.

► Open the cover of the DC jack socket (DC IN).
► Connect the AC cable (1) to the AC adapter.
► Plug the AC cable (2) into a power outlet.
► Connect the AC adapter cable (3) to the DC jack socket (DC IN) of the device.
Switching on the device for the first time

On devices with an ON/OFF button for radio components: Before switching the device on, slide the ON/OFF button for radio components to the "ON" position.

When you switch on the device for the first time, the supplied software will be installed and configured. Because this procedure must not be interrupted, you should set aside enough time for it to be fully completed and connect the device to the AC supply using the AC adapter.

During installation, the device must only be rebooted when you are requested to do so.

To make it easier to use your device for the first time, the operating system is pre-installed on the hard disk.

► Press the ON/OFF button (1) for about one second to switch the device on.
► The power-on indicator (2) lights up whenever the system is switched on.
► During the installation process, follow the on-screen instructions.
If a Windows operating system is installed on your device, you will find more information on the system and drivers, help programs, updates, manuals etc. on the device. This information can also be found online at "http://support.fujitsupc.com/CS/Portal/support.do?srch=DOWNLOADS".

You can find information and help on the Windows operating system functions online at "http://windows.microsoft.com".

If a Windows 8.1 operating system is installed on your Tablet PC, a tutorial is automatically started when a new user logs on for the first time to show you how to use the new functions of Windows 8.1.

### Installing Bonus Apps

After you have started your system the first time, you will see a Bonus Apps icon on your desktop.

- Click on the icon to see which additional applications are available for you to install.
- Applications that are already installed appear in grey, those that are available for installation appear in blue.
- Select the applications you wish to install by selecting the checkbox adjacent to your selection.

or

- Click Select All if you would like to install all available applications
- To confirm your selection click Install.

Note that in some cases (depending upon which application was selected for installation) after installation completes, the system will prompt you to reboot.

There are also cases in which if multiple applications are selected to install but one of them needs a reboot, the system will reboot and continue installing the rest of the selected applications.
Working with the Tablet PC

This chapter describes the basics for operating your Tablet PC. You can find instructions on how to connect external devices (e.g. mouse, flash storage) to the Tablet PC in the chapter "Connecting external devices", Page 66.

Please refer to the notes in the chapter "Important notes", Page 12.

Status indicators

The status indicators (1,2) provide information about the status of the power supply, the drives, and the keyboard functions etc.

<table>
<thead>
<tr>
<th>Status indicator</th>
<th>Description</th>
</tr>
</thead>
</table>
| ![Power-on indicator](image) | **Power-on indicator**  
  • Indicator lights up blue: The Tablet PC is switched on.  
  • The indicator flashes: The Tablet PC is in sleep mode (Save-to-RAM).  
  • The indicator lights up, alternating between blue and white: The Tablet PC is in S3 mode and the wireless component (Wi-Fi or WWAN) is switched on.  
  • The indicator lights up white: The Tablet PC is in S4 or S5 mode and the wireless component (Wi-Fi or WWAN) is switched on.  
  • The indicator is not lit up: The Tablet PC is switched off or in Save-to-Disk mode. |
| ![Battery charging indicator](image) | **Battery charging indicator**  
  • The indicator lights up red: The AC adapter is connected.  
  • The indicator is flashing red: The battery has a charging error.  
  • The indicator is not lit up: The AC adapter is not connected. |
Switching the Tablet PC on

Press the ON/OFF button (1) for about one second to switch the device on.
The power-on indicator (2) lights up whenever the system is switched on.

Programing the ON/OFF button

You can program the ON/OFF button:

<table>
<thead>
<tr>
<th>Operating system</th>
<th>Menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows 7</td>
<td>Start - (Settings) - Control Panel - System and Security - Power Options</td>
</tr>
<tr>
<td>Windows 8.1</td>
<td>Windows 8.1 Desktop - Control Panel - Hardware and Sound - Power Options</td>
</tr>
</tbody>
</table>

If you have assigned a password, you must enter this when requested to do so in order to start the operating system. Detailed information can be found in the chapter "Security functions", Page 59.
Switching the Tablet PC off

Back up your data and close all applications before you switch off your device. Otherwise data might be lost.

► Shut down the operating system correctly.
► If the Tablet PC does not switch itself off automatically, press the ON/OFF button for approx. five seconds.

Handwriting recognition

For detailed information on handwriting recognition, see the documentation for your operating system.

At present, handwriting recognition under Windows 7 or Window 8.1 supports the following languages:

English, German, French, Italian, Japanese, Korean, Chinese (traditional and simplified), Dutch, Portuguese, Spanish, Brazilian, Norwegian (Bokmål and Nynorsk), Swedish, Finnish, Danish, Polish, Rumanian, Serbian (Cyrillic and Latin script), Catalan, Russian, Czech and Croatian.

Under Windows 8.1 you can set the required language under Control Panel – Time, Language and Region – Language.
Touchscreen

High-quality LCD screens (TFT) are installed in Fujitsu Tablet PCs. For technical reasons, these screens are manufactured for a specific resolution. An optimal, clear picture can only be ensured in the resolution intended for the particular screen. A screen resolution which differs from the specification can result in an unclear picture.

The screen resolution of your Tablet PC’s touchscreen is optimally set at the factory.

Current production technology cannot guarantee an absolutely fault-free screen display. A few isolated constantly lit or unlit pixels (picture elements) may be present. The maximum permitted number of such faulty pixels is specified in the international standard ISO 9241-307 (Class II).

Example:
A screen with a resolution of 1280 x 800 has 1280 x 800 = 1024000 pixels. Each pixel consists of three subpixels (red, green and blue), so there are almost 3 million subpixels in total. According to ISO 9241-307 (class II), a maximum of 2 light and 2 dark pixels and in addition 5 light or 10 dark subpixels or an equivalent mix (1 light subpixel counts as 2 dark subpixels) are allowed to be defective.

<table>
<thead>
<tr>
<th>Pixel</th>
<th>A pixel consists of 3 subpixels, normally red, green and blue. A pixel is the smallest element that can be generated by complete functionality of the display.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Subpixel</td>
<td>A subpixel is a separately addressable internal structure within a pixel that enhances the pixel function.</td>
</tr>
<tr>
<td>Cluster</td>
<td>A cluster contains two or more defective pixels or subpixels in a 5 x 5 pixel block.</td>
</tr>
</tbody>
</table>

Background lighting

LCD screens are operated with background lighting. The luminosity of the background lighting can decrease over the period of use of the Tablet PC. However, you can adjust the brightness of your monitor yourself.

Ambient light sensor

If your notebook was shipped with the Windows operating system, the screen brightness is regulated by the ambient light sensor and is dependent on the particular light conditions. This results in optimum readability and longer battery life at the same time.

If your notebook was shipped with Windows 8.1, the adaptive brightness setting is deactivated. To change the ambient light sensor settings, select Control Panel - System and Security - Power Options - Change plan settings - Change advanced power settings - Display - Activate adaptive brightness setting.

Select On to activate the adaptive brightness setting with the help of the ambient light sensor.

Synchronizing the display on the touchscreen and an external monitor

In Windows 7, you can switch between touchscreen and external monitor, if you open Control Panel - Windows Mobility Center, section External Display.

In Windows 8.1 wipe your finger over the screen from the right-hand edge. The setting Charms - Devices - Second monitor opens. Select the desired output type.

You can also use the Fujitsu Display Manager in the Windows Mobility Center to set the output type.
Select display orientation (portrait or landscape format)

You can choose to use either portrait or landscape format for the display.

Windows 7
You can change these settings in the Fujitsu menu or under Start - (Settings -) Control Panel - Hardware and Sound - Display - Settings.

Windows 8.1
You can change these settings under Windows 8.1 Desktop - Control Panel - Hardware and Sound - Windows Mobility Center / Rotate screen.

In the Fujitsu Tablet Controls settings, profiles are saved for operation with different screen orientations. These profiles have preset standard configurations that can be modified as desired.

These settings do not just affect the screen settings on the Tablet PC, but also on external monitors that are connected.

Using fingers

You can execute certain commands by using your finger tip on the touchscreen of your device.

Alternatively, everything which you can select or activate using your finger tip can also be selected or activated using the stylus.

Calibrate the Dual Digitizer for finger-based operation of the device.

If Windows 8.1 is installed on your Tablet PC, your Tablet PC is already calibrated at initial setup.

If a different operating system is installed on your Tablet PC, you must calibrate it with your fingers before first use, so that it recognizes your fingertips as accurately as possible.

As soon as you notice that the accuracy is becoming worse, you must recalibrate the device.

| Lock context-sensitive menus          | ► Use two fingers to tap twice in quick succession on the touchscreen.       |
Using the stylus

1 = stylus tip
2 = stylus button (right mouse button)
3 = eyelet for stylus cord

You can use the stylus on your Tablet PC as an electronic writing tool, to select menu items and to navigate through the programs. Programs that support handwriting recognition also allow you to write directly on the screen with the stylus. You can also use the stylus as a drawing tool.

The Tablet PC is supplied with a stylus tether which you can attach to the eyelets on the stylus and on the Tablet PC.

Use only the stylus that was provided with your Tablet PC. Do not use any other pointed object as a substitute, that was not specially designed for your Tablet PC. Replace the stylus tip if it is worn. The warranty does not cover a scratched screen.

While writing, you should take care that you do not scratch the surface of the display (e.g. with a wristwatch or bracelet).

The stylus of the Tablet PC is an electronic instrument that can be damaged if used improperly. Handle the stylus with care.

Our recommendations for proper handling of the stylus are as follows:

- Do not gesture with the stylus.
- Do not use the stylus as a pointer.
- Do not use the stylus on surfaces other than the screen of the Tablet PC.
- Do not try to turn the grip of the stylus. The grip is used to put the stylus into its slot and to take it out of its slot.
- Never store the stylus with its weight on the tip (e.g. with the tip down in a pen container). If the stylus is stored with the tip pointing down, this may have an adverse effect on the stylus mechanism (particularly under high temperatures). In this case the stylus tip may react as though it is constantly being pressed down. To avoid damage, the stylus should be stored in the stylus slot when not in use.

The stylus can be influenced by electromagnetic fields (cursor quivers or jumps). There may be a few areas on the screen where the cursor quivers slightly in spite of pressing the stylus down firmly.

The screen responds to entries made with the tip of the finger or the stylus when the tip of the finger or the stylus directly touches the screen.

You can use the stylus to perform all functions for which you would otherwise use a mouse.
Delete functions are not supported by the stylus.

</tbody>
</table>
Calibrating the stylus

If Windows 8.1 is installed on your Tablet PC, your Tablet PC is already calibrated at initial setup.

If a different operating system is installed on your Tablet PC, you must calibrate it with the stylus before first use, so that it recognizes the stylus as accurately as possible.

You should also always repeat the calibration if the coordination between the stylus and the cursor movement deteriorates.

<table>
<thead>
<tr>
<th>Operating system</th>

Webcam

Your device has two webcams: one on the front of the device and one on the rear.

The webcam has its own status indicator. The indicator lights up when the webcam is active. Depending on the software used, you can use your webcam to take pictures, record video clips or take part in web chats.

- The picture quality depends on the lighting conditions and the software being used.
- You can only operate the webcam with a particular application (e.g. an Internet telephony program or a video conferencing program which supports a webcam).
- When using the webcam the support of the Tablet PC must not wobble.
- The webcam automatically adjusts itself to the current light level. For this reason, the touchscreen may flicker while the light level is adjusted.

Further information on use of the webcam and additional settings for your webcam can be found in the help function of the program using the webcam.

If you wish to perform a function test with your webcam, appropriate test software is available at "http://www.fujitsu.com/fts/support/index.html".
Rechargeable battery

The built-in battery provides the Tablet PC with the necessary power for use on the move. You can increase the service life of the battery by caring for the battery properly. The average battery service life is around 500 charge/discharge cycles.

You can extend the battery service life by taking advantage of the available energy-saving functions.

Charging and maintaining the battery

The Tablet PC battery can only be charged when the ambient temperature is between 5°C / 41 °F and max. 35°C / 95°F.

You can charge the battery by connecting the Tablet PC to the AC adapter (see "Connecting the AC adapter", Page 17).

If the battery is running low you will hear a warning alarm. If you do not connect the AC adapter within five minutes of hearing the warning alarm, your Tablet PC will switch off automatically.

Monitoring the battery state of charge

A battery symbol for monitoring the battery capacity is displayed in the system bar / status indicator. The battery symbol shows you the battery charge.
Using the energy saving functions

The Tablet PC uses less power when the power management features are enabled. You will then be able to work longer when using the battery before having to recharge it.

The energy efficiency is increased and environmental pollution is reduced. By choosing the best power options, you can make significant savings and at the same time help protect the environment.

We recommend the following settings:

<table>
<thead>
<tr>
<th>Function</th>
<th>Operating on AC power</th>
<th>Operating on battery power</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turn off monitor</td>
<td>After 10 minutes</td>
<td>After 5 minutes</td>
</tr>
<tr>
<td>Turn off hard disk(s)</td>
<td>After 15 minutes</td>
<td>After 10 minutes</td>
</tr>
<tr>
<td>Energy saving (S3)</td>
<td>After 20 minutes</td>
<td>After 15 minutes</td>
</tr>
<tr>
<td>Hibernate mode (S4)</td>
<td>After 1 hour</td>
<td>After 30 minutes</td>
</tr>
</tbody>
</table>

► Set the energy saving functions in your Control Panel.
► Set the screen saver in your Control Panel.

or

► Keep a finger pressed on the desktop to display the context menu. Configure the screen saver under Change screen saver.

If you need further information about an option, you can get help with most settings by pressing the ? symbol in the upper right of the screen to open Microsoft Help.

When the Tablet PC is in a power-saving mode, you must remember the following:

During power-saving mode, open data is held in main memory or in a swap file on the hard disk.

Never switch off the Tablet PC while it is in a power-saving mode. If the built-in battery is nearly flat, close all open files and do not go into power-saving mode.

If you do not intend to use your Tablet PC for a long period of time:

► Exit the power-saving mode if necessary by touching the screen or by switching the Tablet PC on.
► Close all opened programs and completely shut down the Tablet PC.
Memory cards

Your Tablet PC is equipped with an integrated storage card reader. Use storage cards to enlarge the storage of your Tablet PC.

Follow the manufacturer’s instructions when handling the memory cards.

Supported formats

The following formats are supported:

- Micro Secure Digital (Micro SD™ Card)
- Micro SDHC
- Micro SDXC

Inserting the memory card

- Open the slot cover (1).
- Carefully slide the storage card into the slot (2). The label area must be facing upward. Do not apply any force, otherwise the delicate contact surfaces could be damaged.
- Close the slot cover.
Removing the memory card

To avoid any loss of data, always follow the correct procedure for removing the card (see the documentation for your operating system).

- Open the slot cover.

- Pull the storage card out of the slot (1).
- Close the slot cover (2).
SIM card

A SIM Card (Subscriber Identity Module) is a chip card which is inserted in a cellular phone or Tablet PC and, together with an integrated UMTS/LTE module, enables access to a cellular radio network.

Follow the instructions supplied by the provider of the SIM card. If you do not feel the SIM card engage as you insert it, use a pointed object to insert the SIM card.

⚠️

Please note that the SIM card format must be micro-SIM (3FF). Other SIM card formats, such as full-size (1FF), mini-SIM (2FF) or nano-SIM (4FF) do not fit in the SIM card slot of your Tablet PC.

Please do not insert any other format of SIM card as they may become twisted, they could even damage the system.

Inserting a SIM card

► Open the slot cover (1).
► Carefully push the SIM card into the slot (2) until the SIM card clicks into place. The label area must be facing upward. Do not apply any force, otherwise the delicate contact surfaces could be damaged.
► Close the slot cover.
Removing a SIM card

► Open the slot cover.

► Pull the SIM card out of the slot (1).
► Close the slot cover (2).

Wireless LAN/Bluetooth/UMTS/LTE radio components

The installation of radio components not approved by Fujitsu Technology Solutions will invalidate the certifications issued for this device.

Switching the wireless components on and off

The radio components are switched on and off using the appropriate functions of the operating system.

► To switch radio components on and off individually, select Settings – Change PC settings – Network – Airplane mode.
Further information on WLAN and Bluetooth

For further information about WLAN or Bluetooth, see "Appendix: Miscellaneous Information". For WLAN specifications, see chapter "WLAN specifications", Page 82.

Access via Wireless WAN

You can purchase the accessories for Wireless WAN reception from your Fujitsu dealer. If you have ordered a Wireless WAN module, your device will already be prepared when you receive it. You will find information on establishing the connection with the Wireless WAN network in the documentation for the hardware you plan to use.

Ethernet and LAN (only with performance cradle or Keyboard Dock)

The internal network module of your Tablet PC supports Ethernet LAN. You can use it to establish a connection to a local network (LAN = Local Area Network).

► Connect the network cable to the LAN port of the cradle (1).

or

► Connect the network cable to the LAN port of the Keyboard Dock (1).
► Connect the network cable to your network connection (2).

Your network administrator can help you to configure and use the LAN connections. The network cable is not included in the delivery scope. This type of cable can be obtained from a specialist dealer.

GPS

Whether your device has this function depends on the chosen equipment level.
Accessories for your Tablet PC (optional)

The following accessories are available for your Tablet PC:

- Performance cradle for charging the Tablet PC and with additional ports
- Keyboard cover
- Keyboard docking station
- VESA mounting attachment and hand strap
- Shoulder strap
- Folio case
- Micro USB adapters

The following sections provide more information on handling the accessories.

Your performance cradle (optional)

As well as fast charging, your performance cradle is a device that also allows you to quickly connect your Tablet PC to your peripherals such as a monitor, keyboard, mouse, etc. You only need to dock the Tablet PC to be able to work with your peripheral devices.
Cradle components

1 = Connector on the cradle for the docking port of the Tablet PC
2 = USB port 3.0
3 = USB port 3.0
4 = VGA monitor port
5 = HDMI
6 = LAN port
7 = DC jack socket (DC IN)

Setting up the cradle

Select a suitable location for the cradle before setting it up. In doing so, please follow these instructions:

- Place the cradle on a flat, stable, non-slippery surface.
- Never place the cradle or the AC adapter on a heat-sensitive surface.
- Do not expose the cradle to extreme environmental conditions. Protect the cradle from dust, moisture and heat.
Connecting the Tablet PC to the cradle

It is possible to connect the Tablet PC to the cradle while it is running. To prevent problems, we recommend that you switch the Tablet PC off first.

Disconnect the AC adapter from the Tablet PC before connecting the Tablet PC to the cradle.

When the Tablet PC is connected to the cradle, you must connect the AC adapter to the cradle.

Information for using the performance cradle:

• If your Tablet PC is connected to the performance cradle, the micro USB port of the Tablet PC cannot be used. Use the alternative ports of the cradle.
• The HDMI and VGA ports of the performance cradle cannot be used at the same time. If devices are connected to both ports, only the device at the HDMI port can be used.
• The maximum supported resolution for VGA/HDMI is 1920 x 1080 pixels.

► Switch the Tablet PC off.
► Remove the AC plug of the AC adapter from the power outlet.
► Remove the AC adapter cable from the DC jack (DC IN) of the Tablet PC.
Position the Tablet PC so that it aligns with the surface of the cradle.

Push the Tablet PC on to the cradle in the direction of the arrow (1) until you feel it engage on the connector.

Plug the AC adapter cable into the DC jack (DC IN) on the cradle (2).

Connect the AC cable to the AC adapter (3).

Plug the AC cable into the power outlet (4).
Disconnecting the Tablet PC from the cradle

It is possible to separate the Tablet PC from the cradle while it is running. However, to prevent any problems, we recommend that you switch the Tablet PC off first or that you execute the appropriate undocking function provided by the operating system.

► Switch the Tablet PC off.

► While holding down the lower part of the cradle, lift the Tablet PC from the cradle in the direction of the arrow (1).

Keyboard cover (optional)

The keyboard cover is optimized for the convenient input of text. It only needs to be docked with the Tablet PC.
Accessories for your Tablet PC (optional)

Keyboard cover components

1 = Slide-out button
2 = Extending stand (in extended state)
3 = Docking connector for the Tablet PC
4 = Status indicators (Num Lock, Caps Lock, Scroll Lock)
Connecting the Tablet PC to the keyboard cover

- Place the keyboard cover on a smooth and level surface. Make sure that the stand is fully extended.

To prevent the Tablet PC from tipping over and becoming damaged, always make sure that the stand is fully extended when you use the keyboard cover.

- Completely pull out the extending stand (1).
- Press the slide-out button (2) until it firmly remains in pressed position (red marking visible).
- Push the Tablet PC onto the keyboard cover in the direction of the arrow until you feel it engage on the connector (3).
Separating the Tablet PC from the keyboard cover

► Keep the slide-out button pressed (1).
► Lift the Tablet PC away from the keyboard cover in the direction of the arrow (2).
Accessories for your Tablet PC (optional)

Keyboard docking station (optional)

The keyboard docking station is a device which has been optimized for convenient input of texts and allows external devices to be connected. It only needs to be docked with the Tablet PC.

Ports on the keyboard docking station

1 = Release button
2 = Docking port for the Tablet PC
3 = Status indicators (Num Lock, Caps Lock, Scroll Lock)
4 = VGA monitor port
5 = USB port (USB 3.0)
6 = LAN port
7 = HDMI port
8 = USB port (USB 3.0)
9 = Battery indicator
10 = Battery charging indicator
## Status indicators

<table>
<thead>
<tr>
<th>Status indicator</th>

<tr>
<td>Battery charging</td>
<td>The battery charging indicator shows whether the battery is being charged.</td>
</tr>
<tr>
<td>indicator</td>
<td>• The indicator lights up red: The AC adapter is connected and the battery is being charged.</td>
</tr>
<tr>
<td></td>
<td>• The indicator lights up white: The AC adapter is connected and the battery is fully charged / is not being charged.</td>
</tr>
<tr>
<td></td>
<td>• The indicator is not lit up: The AC adapter is not connected.</td>
</tr>
</tbody>
</table>
Connecting the Tablet PC to the keyboard docking station

- Position the keyboard docking station as shown.

- Push the Tablet PC onto the keyboard docking station in the direction of the arrow until you feel it engage on the connector.
Separating the Tablet PC from the keyboard docking station

- Keep the unlocking button pressed (1).
- Lift the Tablet PC away from the keyboard cover in the direction of the arrow (2).
**VESPA mounting attachment (optional)**

Use the VESA mounting attachment to secure the Tablet PC to a monitor with the corresponding screw holes.

- Use the appropriate tool of the correct size when securing the screws.
- Keep the screws out of the reach of children.

► Remove the 4 screws (1).
► Position the VESA mounting attachment on the Tablet PC (2). Make sure that the screw holes of the VESA mounting attachment and of the Tablet PC lie exactly on top of each other.
► Secure the VESA mounting attachment using the screws (3).
Hand strap (optional)

- Use the appropriate tool of the correct size when securing the screws.
- Keep the screws out of the reach of children.
- Do not shake the device too much when you are holding it on the hand strap, otherwise it may fall down.

► Position the hand strap on the Tablet PC (1). Make sure that the screw holes of the hand strap and of the Tablet PC lie exactly on top of each other.
► Secure the hand strap with the screws (2).
Shoulder strap (optional)

- Use the appropriate tool of the correct size when securing the screws.
- Keep the screws and mountings out of the reach of children.

► Remove the screws (1).
► Position the fittings (2).
► Secure the fittings using the screws (3).
Secure the shoulder strap to the fittings.

**Folio case (optional)**

- The folio case contains magnets. Keep away from objects that may be easily affected by the influence of magnetism.
- LCD may be accidentally turned on if the cover is not properly closed.
- Make sure the unit is firmly fitted into the folio case fasteners so it will not fall out.
- This folio case is only designed to contain and carry this unit. Do not use it for any other purpose.
- Do not put the folio case in a direct sunlight or expose to high temperature and humidity.

Position the Tablet PC on the folio case as shown.

Engage the top edge and then press it down.

The following illustration shows you the many ways in which the folio case can be used:
Micro USB adapters

5 USB adapters are available for the device:

- Micro USB to USB adapter
- Micro USB to HDMI adapter
## Accessories for your Tablet PC (optional)

</table>

For technical specifications, see chapter "Micro USB adapters", Page 85.
Security functions

Your Tablet PC has several security features that you can use to secure your system and your personal data from unauthorized access.

This chapter explains how to use these functions, and what the benefits are.

Please remember that in some cases - for example, forgetting your password - you may be locked out of the system and unable to access your data. Therefore, please note the following information:

- Back up your data on external data carriers at regular intervals.
- Some security functions need you to choose passwords. Make a note of the passwords and keep them in a safe place.

If you forget your passwords you will need to contact our Service Desk. Deletion or resetting of passwords are not covered by your warranty and a charge will be made for assistance.
Configuring the fingerprint sensor

The fingerprint sensor can record the image of a fingerprint. With additional fingerprint software, this image can be processed and used instead of a password.

► Install the fingerprint software to be able to use the fingerprint sensor (1).
Configuring password protection in BIOS Setup Utility

Before using the various options for password protection in the BIOS Setup Utility, please proceed as follows to increase data security:

Make a note of the passwords and keep them in a safe place. If you forget your supervisor HDD password you will not be able to access your Tablet PC. Deletion of passwords is not covered by your warranty and a charge will therefore be made for assistance.

Your password can be up to eight characters long and can contain letters and numbers. No distinction is made between uppercase and lowercase.

Protecting BIOS Setup Utility (supervisor HDD password and user HDD password)

If you have opened these operating instructions on the screen, we recommend that you print them out. You cannot call up the instructions on the screen while you are setting up the password.

The supervisor HDD password and the user HDD password both prevent unauthorized use of the BIOS Setup Utility. The supervisor HDD password allows you to access all of the functions of the BIOS Setup Utility, while the user HDD password will only give you access to some of the functions. You can only set a user HDD password when a supervisor HDD password has already been assigned.

Calling and using the BIOS Setup Utility is described in the chapter "Settings in BIOS Setup Utility", Page 70.

Assigning the supervisor and user passwords

► Start the BIOS Setup Utility and go to the Security menu.
► Select the Set Supervisor Password field and press the Enter key.
  ➤ With Enter new Password: you are asked to enter a password.
  ➤ Enter the password and press the Enter key.
  ➤ Confirm new Password requires you to confirm the password.
  ➤ Enter the password again and press the Enter key.
  ➤ Changes have been saved is displayed as a confirmation that the new password has been saved.
► To set the user password, select Set User Password and proceed exactly as when configuring the supervisor password.
► If you do not want to change any other settings, you can exit BIOS Setup Utility.
► In the Exit menu, select the option Save Changes & Exit.
► Select Yes and press the Enter key.
► The Tablet PC is rebooted and the new password is effective. It will now be necessary to first enter your supervisor or user password in order to open the BIOS Setup Utility. Please note that the user password only provides access to a few of the BIOS settings.
Changing the supervisor HDD password or user HDD password

You can only change the supervisor HDD password when you have logged into the BIOS Setup Utility with the supervisor HDD password.

► Start the BIOS Setup Utility and go to the Security menu.
► When changing the password, proceed exactly as when assigning a password.

Removing passwords

To remove a password (without setting a new password) perform the following steps:

► Start the BIOS Setup Utility and go to the Security menu.
► Highlight the Set Supervisor Password or Set User Password field and press the Enter key.
► You will be requested to enter the current password by the Enter Current Password prompt. Enter New Password will appear and you will be requested to enter a new password.
► Press the Enter key twice at this request.
► In the Exit menu, select the option Save Changes & Exit.
► Select Yes and press the Enter key.
► The Tablet PC is rebooted and the password is removed.

Removing the supervisor password simultaneously deactivates the user password.

Password protection for booting the operating system

You can also prevent booting of the operating system with the supervisor HDD password you have set in the BIOS Setup Utility (see section "Assigning the supervisor and user passwords", Page 61).

Activating system protection

► Start the BIOS Setup Utility and go to the Security menu.
► Select the Password on Boot option and press the Enter key.
► Select the option you require (Disabled, First Boot or Every Boot) and press the enter key.
► Select the Save Changes & Exit option under Exit.
► The Tablet PC reboots. You will be prompted to enter your password (the supervisor password).

Deactivating system protection

► Start the BIOS Setup Utility and go to the Security menu.
► Select the Password on Boot option and press the Enter key.
► Select the Disabled option and press the Enter key.
► If you do not want to change any other settings, you can exit BIOS Setup Utility.
► Select the Save Changes & Exit option under Exit.
► The Tablet PC reboots. The system is no longer password protected.
Password protection for the hard disk

The hard disk password prevents unauthorized access to the hard disk drives and is checked internally each time the system is booted. The condition for this is that you have assigned at least the supervisor HDD password.

Activating hard disk protection

► Call up the BIOS Setup and select the Security menu.
► If you have not assigned BIOS passwords yet, define the supervisor and the user password now, if desired (see "Security functions", Page 59).
► Mark the Hard Disk Security field and press the Enter key.
► In the area Drive0, mark the field Set Master Password and press the Enter key.
► Enter new Password then appears and you are asked to enter a password.
► Enter the password and press the Enter key.
► Confirm new Password requires you to confirm the password.
► Enter the password again and press the Enter key.
► With Setup Notice: Changes have been saved you receive confirmation that the new password has been saved.
► If you wish to enter a password for a second hard disk (Drive1), in the area Drive1 mark the field Set Master Password and proceed in exactly the same way as for the set up of the first hard disk (Drive0).
► The field Password Entry on Boot is set to Enabled by default. You can exit the BIOS Setup once you have finished changing the settings.
► From the Exit menu, choose the option Exit Saving Changes.
► Press the Enter key and select Yes.
► The Tablet PC reboots and your hard disk is now protected with a password. The password prompt is enabled as soon as the Tablet PC has rebooted.

Deactivating hard disk protection

To cancel a password (without setting a new password) proceed as follows:

► Call up the BIOS Setup and select the Security menu.
► Mark the Hard Disk Security field and press the Enter key.
► In the area Drive0, mark the field Set Master Password and press the Enter key.
► With the prompt Enter current Password you are first asked to enter the old password again. With Enter new Password you are then prompted to enter a new password.
► After the request, press the Enter key three times.
► From the Exit menu, choose the option Exit Saving Changes.
► Press the Enter key and select Yes.
► The Tablet PC reboots and there is no longer any password protection for this hard disk.
► If you wish to remove a password for a second hard disk (Drive1), in the area Drive1 mark the field Set Master Password and proceed in exactly the same way as for the removal of the first hard disk (Drive0).
SmartCard reader (optional)

SmartCards are not supplied as standard equipment. You can use all SmartCards that comply with the ISO standard 7816-1, -2 or -3. These SmartCards are available from various manufacturers.

With the appropriate software you can use your SmartCard as an alternative to password protection, but also as a digital signature, for encrypting your e-mails or for home banking.

We recommend that you always use two SmartCards. Always keep one of the SmartCards in a safe place if you are carrying the other SmartCard with you.

In order to be able to take advantage of all the security features of your Tablet PC, you will need a CardOS SmartCard from Fujitsu.

The SmartCard can only be used with a PIN, so maximum protection is maintained even when the SmartCard is lost. In order to maximize your security, the CardOS SmartCard is disabled if three incorrect attempts are made to enter the PIN.

During first time use of your CardOS SmartCard, you must either enter the preset PIN "12345678" or the PIN which has been notified to you by your system administrator.

Inserting the SmartCard

Do not use force when inserting and removing the SmartCard.

Make sure that foreign objects do not fall into the SmartCard reader.

Push the SmartCard into the SmartCard reader with the chip facing the rear of the Tablet PC.
Trusted Platform Module - TPM (device dependent)

To use the TPM, you must enable the TPM in the BIOS Setup before the software is installed. The requirement for this is that you have assigned at least the supervisor HDD password (see "Security functions", Page 59).

Enabling TPM

- Requirement: You have assigned a supervisor HDD password (see "Security functions", Page 59).
- Call BIOS Setup and select the Security menu.
- Mark the TPM Security Chip Setting field and press the Enter key.
- Once you have enabled the TPM the Clear Security Chip menu item appears.
  You can clear the holder in the TPM using Clear Security Chip. With Enabled, all secret keys (e.g. SRK - Storage Root Keys, AIK - Attestation Identity Keys etc.) generated by applications are deleted.
  Take note that you can then no longer access the data you have encrypted on the holder-based keys!
  - Select the Exit Saving Changes option in the Exit menu.
  - Press the Enter key and select Yes.
- The Tablet PC restarts and the TPM is enabled after the reboot.

Disabling TPM

- Requirement: You have assigned a supervisor HDD password (see "Security functions", Page 59).
- Call BIOS Setup and select the Security menu.
- Mark the TPM Security Chip Setting field and press the Enter key.
- Select the entry Disabled to disable the TPM.
- From the Exit menu, choose the option Exit Saving Changes.
- Press the Enter key and select Yes.
- The Tablet PC is rebooted and the TPM is disabled.
Connecting external devices

Under all circumstances, please observe the safety notes provided in the "Important notes", Page 12 chapter before connecting or disconnecting any devices to or from your Tablet PC.

Always read the documentation supplied with the device you wish to connect.

Never connect or disconnect cables during a thunderstorm.

Never pull at a cable when disconnecting it. Always grasp the plug.

Follow the order described below when you connect external devices to the Tablet PC or separate them from it:

With some devices, such as USB devices, it is not necessary to switch off the Tablet PC and the device before connecting/disconnecting. For more information about whether or not devices need to be switched off, please refer to the documentation supplied with your external device.

Some of the external devices require special drivers (see the operating system and external device documentation).

Connecting devices to the Tablet PC (or to the cradle / keyboard docking station).
1. Switch off the Tablet PC and all the external devices.
2. Disconnect the AC plugs for the Tablet PC and all the affected devices from the power outlets.
3. Connect the cables for all the external devices according to the instructions.
4. Plug all the AC plugs into the power outlets.

Disconnecting devices from the Tablet PC (or from the cradle / keyboard docking station)
1. Switch off the Tablet PC and all the external devices.
2. Disconnect the AC plugs for the Tablet PC and all the affected devices from the power outlets.
3. Disconnect the cables for all the external devices following the instructions.
Connecting an external monitor

HDMI port (only performance cradle and keyboard docking station)

The HDMI port can be used to connect an external amplifier, LCD TV or a plasma TV with an HDMI connection.

- Connect the data cable to the external device.
- Connect the data cable to the HDMI port.

Some LCD televisions have only two speakers/speaker ports and therefore cannot reproduce Dolby Digital or DTS. To play back HDMI sound, you must change the HDMI sound settings accordingly.

You can find the settings under Control Panel - Hardware and Sound. Deactivate the settings for DTS Audio and Dolby Digital to enable playback of HDMI sound.

VGA monitor port (only performance cradle and keyboard docking station)

An analog monitor is connected to the analog VGA monitor port. Screen output is limited to a maximum of two screens at the same time.

- Switch off the Tablet PC and the external monitor.
- Plug the data cable of the external monitor into the monitor port.
- First switch on the external monitor and then switch on the Tablet PC.

You can also switch back and forth between the external monitor and the LCD screen of the Tablet PC, see "Touchscreen", Page 23.

You can display the same image on the external monitor and on the LCD screen of the Tablet PC at the same time.
Connecting USB devices

On the USB ports you can connect external devices that also have a USB port (e.g. a DVD drive, a printer, a scanner or a modem).

USB devices are hot-pluggable. This means you can connect and disconnect the cables of USB devices while the operating system is running.

USB 1.x has a maximum data transfer rate of 12 Mbps.
USB 2.0 has a data transfer rate of up to 480 Mbps.
USB 3.0 has a data transfer rate of up to 5 Gbps.

Additional information can be found in the documentation for the USB devices.

► Connect the data cable to the external device.
► Connect the data cable to a USB port (Tablet PC, keyboard docking station or cradle) or micro USB port (only on Tablet PC).

Device drivers

USB devices will be automatically recognized and installed by your operating system.

How to remove USB devices correctly

Always correctly remove the device according to the rules described below, to ensure that none of your data is lost.

► Tap the symbol for safe removal of the hardware.
► Select the device you wish to shut down and remove.
► Tap OK.
► Wait for the dialog box which tells you that it is now safe to remove the device.
Connecting external devices

Headphones port

You can connect either headphones or external speakers to your Tablet PC via the headphone port.

► Connect the audio cable to the external device.
► Connect the audio cable to the headphone port of the Tablet PC.
← The internal speakers are disabled.

If you buy a cable from a retailer, please note the following information:
The headphone port on your Tablet PC is a "3.5 mm / 1/8" jack socket".
If you want to connect headphones or speakers you will need a "3.5 mm / 1/8" jack plug".
Settings in BIOS Setup Utility

To navigate more easily in the BIOS Setup Utility, you can use an external USB keyboard.

The BIOS Setup Utility allows you to set the system functions and the hardware configuration for the Tablet PC.

When the Tablet PC is delivered, the default settings are effective. You can change these settings in the menus of the BIOS Setup Utility. Any changes you make take effect as soon as you save and exit the BIOS Setup Utility.

The BIOS Setup Utility program contains the following menus:

- **About**
  - Displays information relating to the BIOS, processor and Tablet PC

- **System**
  - Advanced system settings

- **Advanced**
  - Configuration of various hardware components, such as mouse, keyboard, processor

- **Security**
  - Password settings and security functions

- **Boot**
  - Configuration of the start-up sequence

- **Exit**
  - Exits the BIOS Setup Utility

Starting the BIOS Setup Utility

► Keep the "Lock screen orientation" tablet button pressed and switch the Tablet PC on.

► If a password has been assigned, enter the password and press the Enter key.

If you have forgotten the password, contact your system administrator or contact our customer service centre.

The BIOS Setup Utility starts.
BIOS Setup Utility operation

Press the F1 key to display help about operation of the BIOS Setup Utility. The description of the individual settings is shown in the right-hand window of the BIOS Setup Utility.

With the F9 key you can load the default settings of the BIOS Setup Utility.

► Use the cursor keys ← or → to select the menu you wish to access to make changes.
► The menu is displayed on the screen.
► Select the option you want to change with the cursor keys ↑ or ↓.
► Press the “Enter” key.
► Press the ESC key to exit the selected menu.
► For future reference, make a note of the changes you have made.
Exiting BIOS Setup Utility

You need to select the desired option in the Exit menu and activate it by pressing the Enter key:

Exit Saving Changes - save changes and exit BIOS Setup Utility
► To save the current menu settings and exit the BIOS Setup Utility, select Exit Saving Changes and Yes. 
⇦ The Tablet PC is rebooted and the new settings come into effect.

Exit Discarding Changes - Reject changes and exit BIOS Setup Utility
► To discard the changes, select Exit Discarding Changes and Yes. 
⇦ The settings which were valid when BIOS Setup Utility was called remain effective. The BIOS Setup Utility ends and the Tablet PC is rebooted.

Load Setup Defaults – load default values
► To copy the standard entries for all menus of the BIOS Setup Utility, choose Load Setup Defaults and Yes.

Discard Changes - Discard Changes without exiting BIOS Setup Utility
► To discard the changes you have made, select Discard Changes and Yes. 
⇦ The settings in place when BIOS Setup Utility was called remain effective. You can now make additional settings in the BIOS Setup Utility. 
► If you want to exit the BIOS Setup Utility with these settings, select Exit Saving Changes and Yes.

Save Changes - save changes without exiting the BIOS Setup Utility
► To save the changes, select Save Changes and Yes. 
⇦ The changes are saved. You can now make additional settings in the BIOS Setup Utility. 
► If you want to exit BIOS Setup Utility with these settings, choose Exit Saving Changes and Yes.

Save changes and power off
► To save the changes and switch off your device, select Save Changes and Power Off and Yes. 
⇦ The changes are saved. Your device is shut down.
Troubleshooting and tips

If a fault occurs, try to correct it as described. If you are unable to correct the problem, proceed as follows:

► Make a note of the steps and the circumstances that led to the fault. Also make a note of any error messages displayed.
► Switch the notebook off.
► Please contact the Hotline/Service Desk.

You can contact Fujitsu Service and Support in the following ways:

- Toll free number: 1-800-Fujitsu (1-800-838-5487)
- Website: "http://solutions.us.fujitsu.com/www/content/support/contact/index.php"

Please have the following information ready when you call:

- The model name and serial number of the notebook. The serial number is located on a sticker on the underside of the notebook.
- Notes of any messages that appear on the screen and information on acoustic signals.
- Any changes you have made to the hardware or software since receiving the notebook.
- Any changes you have made to the BIOS Setup settings since receiving the notebook.
- Your system configuration and all peripheral devices connected to your system.
- Your sales contract.

Our notebooks have been designed primarily with mobile applications in mind. This means that considerable effort has been made to optimize components and equipment in terms of weight, space and energy requirements. Depending on the particular configuration you have purchased, it is possible that functionality may be slightly reduced compared to a desktop PC if you are running processor-intensive gaming software, e.g. games with intensive 3D graphics. Updating your hardware with drivers which have not been approved by Fujitsu may result in performance losses, data losses or malfunction of the equipment. A list of approved drivers and current BIOS versions can be downloaded from: "http://solutions.us.fujitsu.com"

Help if problems occur

Should you encounter a problem with your computer that you cannot resolve yourself:

► Note the ID number of your device. The ID number is found on the type rating plate on the back or underside of the casing.
► For further clarification of the problem, contact the Fujitsu Service Desk. When you do this, please have ready the ID number and serial number of your system.

Recovering your Factory Image

In the event you need to restore your original Factory Image refer to the steps in "Appendix: Miscellaneous Information".
### The Tablet PC’s date or time is incorrect

Manufacturer’s notes

Disposal and recycling

You can find information on this subject on your notebook or on our website ("http://solutions.us.fujitsu.com/www/content/products/trade-in_program/").

Recycling your battery

Over time, the batteries that run your mobile computer will begin to hold a charge for a shorter amount of time; this is a natural occurrence for all batteries. When this occurs, you may want to replace the battery with a fresh one*. If you replace it, it is important that you dispose of the old battery properly because batteries contain materials that could cause environmental damage if disposed of improperly.

Fujitsu is very concerned with environmental protection, and has enlisted the services of the Rechargeable Battery Recycling Corporation (RBRC)**, a nonprofit public service organization dedicated to protecting our environment by recycling old batteries at no cost to you.

RBRC has drop-off points at tens of thousands of locations throughout the United States and Canada. To find the location nearest you, go to "www.RBRC.org" or call 1-800-822-8837.

If there are no convenient RBRC locations near you, you can also go to the EIA Consumer Education Initiative website "http://EIAE.org/" and search for a convenient disposal location.

Remember – protecting the environment is a cooperative effort, and you should make every effort to protect it for current and future generations.

* To order a new battery for your Fujitsu mobile computer, go to the Fujitsu shopping site at "www.shopfujitsu.com" in the US or "www.fujitsu.ca/products/notebooks" in Canada.

** RBRC is an independent third party to which Fujitsu provides funding for battery recycling; RBRC is in no way affiliated with Fujitsu.

Declarations of Conformity

This device complies with Part 15 of the FCC rules. Operations are subject to the following two conditions: (1) This device may not cause harmful interference, (2) This device must accept any interference received, including interference that may cause undesired operation.
Regulatory notices

FCC Notices

NOTICE:
Changes or modifications not expressly approved by Fujitsu could void this user’s authority to operate the equipment.

Notice to Users of Radios and Television

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet that is on a different circuit than the receiver.
• Consult the dealer or an experienced radio/TV technician for help.

DOC (Industry CANADA) notice

Radios and Television

This Class B digital apparatus meets all requirements of Canadian Interference-Causing Equipment Regulations.

CET appareil numérique de la class B respecte toutes les exigence du Réglement sur le matériel brouilleur du Canada.

UL Notice

This unit requires an AC adapter to operate. Only use UL Listed I.T.E. adapters with an output rating of 19 VDC, with a minimum current of 3.42 (65W). The correct output rating is indicated on the AC adapter label. Refer to the illustration below for the correct AC Adapter output polarity:

When using your notebook equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

• Do not use this product near water for example, near a bathtub, washbowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
• Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
For Authorized Repair Technicians Only

CAUTION:
For continued protection against risk of fire, replace only with the same type and rating fuse.

WARNING:
Danger of explosion if Lithium (CMOS) battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to the manufacturer’s instructions.

FCC Regulatory information

Federal Communications Commission statement
This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

FCC Interference Statement
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the distance between the equipment and the receiver.
3. Connect the equipment to an outlet on a circuit different from the one the receiver is connected to.
4. Consult the dealer or an experienced radio/TV technician for help.

Please note the following regulatory information related to the optional radio device.

FCC Radio Frequency Exposure statement
This radio device has been evaluated under FCC Bulletin OET 65C and found compliant with the requirements as set forth in CFR 47 Sections 2.1091, 2.1093, and 15.247 (b) (4) addressing RF Exposure from radio frequency devices. The radiated output power of this radio device is far below the FCC radio frequency exposure limits. Nevertheless, this device shall be used in such a manner that the potential for human contact during normal operation is minimized. When using this device, a certain separation distance between antenna and nearby persons must be maintained to ensure RF exposure compliance. In order to comply with RF exposure limits established in the ANSI C95.1 standards, the distance between the antennas and the user should not be less than 20 cm (8 inches).

Regulatory Notes and Statements
Radio device, health and authorization for use
Radio-frequency electromagnetic energy is emitted from the wireless devices. The energy levels of these emissions, however, are far much less than the electromagnetic energy emissions from wireless devices such as mobile phones. Radio devices are safe for use by consumers because they operate within the guidelines found in radio frequency safety standards and recommendations.

The use of the radio devices may be restricted in some situations or environments, such as:

- on board an airplane, or
- in an explosive environment, or
- in situations where the interference risk to other devices or services is perceived or identified as harmful.

In cases in which the policy regarding use of radio devices in specific environments is not clear (e.g., airports, hospitals, chemical/oil/gas industrial plants, private buildings), obtain authorization to use these devices prior to operating the equipment.

**Regulatory Information/Disclaimers**

**Export restrictions**

This product or software contains encryption code which may not be exported or transferred from the US or Canada without an approved US Department of Commerce export license. This device complies with Part 15 of FCC Rules, as well as ICES 003 B / NMB 003 B. Operation is subject to the following two conditions:

(1) this device may not cause harmful interference, and

(2) this device must accept any interference received, including interference that may cause undesirable operation.

Modifications not expressly authorized by Fujitsu may invalidate the user’s right to operate this equipment.
ENERGY STAR Compliance

Your Fujitsu system is an ENERGY STAR qualified mobile PC. By choosing a computer with the latest energy-saving technology, you’re helping to preserve our environment for future generations. ENERGY STAR is a joint program of the U.S. Environmental Protection Agency, U.S. Department of Energy, Natural Resources Canada, and other governments around the world helping us save money while protecting the environment through energy efficient products and practices. With energy costs and global warming top-of-mind for consumers, Fujitsu is committed to offering solutions that help consumers conserve energy and improve the quality of our environment.

Sleep Mode:

You will notice that your computer is initially set so that the display turns off after 15 minutes of user inactivity, and the computer goes into Sleep mode after 20 minutes of user inactivity. When going into Sleep mode, the computer also reduces the speed of any active Ethernet network links. To “wake” the computer from Sleep mode, press the Suspend/Resume Button.

Energy saving benefits:

Fujitsu ENERGY STAR qualified mobile PCs use about half as much electricity as standard equipment – saving half in utility costs. But more than that, ENERGY STAR also makes a difference for the environment. Did you know that the average house can be responsible for twice the greenhouse gas emissions as the average car? That’s because every time you flip on a light switch, run your dishwasher, or turn on your PC, you use energy, which means more greenhouse gas emissions from power plants. So the more energy we can save through energy efficiency, the more we help to reduce greenhouse gases and the risks of global warming.

To learn more about the important ENERGY STAR program, visit: "www.energystar.gov".

To read about how Fujitsu is supporting Sustainable Management along with several other environmental activities, visit the Fujitsu Corporate Citizenship page at: "http://www.computers.us.fujitsu.com/www/content/aboutus/environmental/environment.php".
Appendix

Image Backup and Recovery Procedures

Thank you for purchasing a Fujitsu computer. Fujitsu is committed to bringing you the best computing experience with your new system.

It is very important that you create DVD copies of your Recovery Image and Bootable Disk before beginning to use your system. To do so, follow the instructions in the “Creating a Backup of Bootable Disk and Recovery Image” section of this document.

It is also important that you create a copy of the software that is essential for your system to access the internet (hereafter called “essential access software”) to external writable media or an external drive. To do so, follow the instructions in the “Creating a Backup of the System-Specific Software Drivers”.

Creating a Backup of Bootable Disk and Recovery Image

When you purchased your new system, a copy of the recovery image was loaded into a hidden partition on your hard disk drive. Having a copy of the recovery image available to you means that in the event of system failure, you will be able to restore it and re-install the essential access software using Fujitsu Software Auto Installer.

To make a copy of the recovery image to DVD disks, you will need three or four blank disks to create the copy. After creating the copy, be sure to label the disks and keep them in a safe place to ensure they do not get damaged.

Note: If your system does not have an internal writable DVD drive, connect your system to an external drive* before beginning the following steps.

1. Launch System Restore and Recovery from the desktop icon. It will allow you to create the Bootable Disk and the Recovery Image Disk Set.
2. On “Step 1: Select the Bootable Disk from the list”:
   a. Select a media type.
   b. Notice the number of disks that are needed for the set.
   c. Click Next to proceed.
4. On “Step 3:” follow the on-screen instructions to make the disk or disk set, then click Start. It takes approximately 20 minutes to make one disk.
5. On “Step 4”, when the disk creation is completed, a message appears. Click Finish to exit the program.
6. Repeat Step 1: Select Recovery Disk from the list and repeat the above steps 2(a), 2(b), 2(c), 3, 4 and 5.

* DEPENDING UPON YOUR OPTICAL DRIVE AND MEDIA FORMAT USED, SOME MEDIA TYPES MAY BE INCOMPATIBLE FOR CREATING IMAGE BACKUPS.
Creating a Backup of Essential Access Software

When you purchased your new system, a “Fujitsu Software Extractor” shortcut was loaded to “C:\Fujitsu\Drivers\AutoInstaller\”. This shortcut allows you to save the software driver packages along with the extracted Auto Installer software package to a selected location. It is recommended that you save these packages to writable media or an external drive. This ensures that in the event of system failure you will be able to re-install the essential access software.

1. Open the C:\Fujitsu\Drivers\AutoInstaller\ folder
2. Run “Fujitsu Software Extractor” as an Administrator
   a. Right-click on Fujitsu Software Extractor.
   b. Select the “Run as Administrator” option from the menu that is displayed.
3. The default save location is C:\Fujitsu\AutoInstaller\Drivers\. You can change the location by clicking on the Browse button and selecting your preferred location.
   Note: It is recommended that you change the default location and save the software packages to the external writable media or drive.
4. Click on the Save Packages button.
5. Fujitsu Software Extractor copies the zipped software packages and Readme files, and extracts the Auto Installer folder to the selected location.

Note: The extracted Auto Installer will later be used to install the software automatically on the system in the event of generic image restoration when the software is not pre-installed in the image.

RECOVER YOUR SYSTEM WHEN THE HARD DRIVE IS STILL ACCESSIBLE

Using the Recovery and Utility Tools

The Recovery and Utility tools consist of a variety of tools that will help you recover your recovery image and system images, and delete the data from your hard disk.

Methods for accessing the utilities

Recovery and Utility Tools are preinstalled in a hidden partition by the factory, or they can be accessed by using the bootable disk.

Note: The Recovery and Utility tools may be deleted from your hard disk drive if you modify the partitions. If that occurs, you will not be able to use the hidden partition for booting to Recovery and Utility Tools, but you will still be able to boot from the Bootable Disk.
Determining whether Recovery and Utility is pre-loaded

1. Turn on or reboot your system. When the Fujitsu logo appears, press the \[F12\] key.
2. Use the \[Tab\] key to get to the Application Menu.
3. Check whether the Recovery and Utility option is present. If it is not present, it means that the utility must be used from the Bootable Disk. Proceed to “Running Recovery and Utility from the Bootable Disk” if Recovery and Utility is unavailable.

Running Recovery and Utility from hard disk

1. Turn on or reboot your system. When the Fujitsu logo appears, press the \[F12\] key.
2. Use the \[Tab\] key to get to the Application Menu.
3. Cursor down to Recovery and Utility and press the \[Enter\] key.
5. Three tool options appear: Diagnostics, Recovery, and Utility (refer to the Recovery and Utility tools section below for instructions on how to use these tools).
6. If this was successful please skip the next step and go to “Recovery and Utility tools.”
7. If this was NOT successful, please go to the next step.

Running Recovery and Utility from the Bootable disk

To verify/change the boot-up priority (rather than booting-up from the hard drive or an external media drive), perform the following steps:

1. Power on your system. When the Fujitsu logo appears on the screen, press the \[F12\] key.
2. Insert the bootable disk into the drive tray.
3. Highlight the CD/DVD option from the Boot menu, then press \[Enter\].
4. Click \[OK\].
5. Select CD/DVD boot mode: UEFI Mode, if applicable, and then press \[Enter\]. While the files are being loaded from the disk, the Fujitsu logo screen will appear followed by a progress bar at the bottom of the screen.
Recovery and Utility tools

Note: Recovery and Utility tools may not be available on your system depending on the region from which the system was shipped.

Diagnostics tool: The Diagnostics tool is designed for use by IT professionals. It is not likely you will need to use this tool. If you should need to use this tool, perform the following steps:

1. Press the Diagnostics Tool button to start the Diagnostics tool.
2. Read the note, and then click OK.
3. Choose one or more of the following options for diagnostics on the Fujitsu Hardware Diagnostics Tool window: CPU, Memory, Display, Hard Disk, CD/DVD/BD, Floppy Disk, Keyboard, and Mouse.
4. Click the Option button in the Tool menu to specify how many times the tool should run diagnostics on each selected component.
5. Press Execute to start the Diagnostics tool.
6. After the execution is completed, the selected components are circled in red to indicate that they have been diagnosed and the result dialog window opens. Click Close to close the window.
7. Click End to close the Diagnostics tool, and then click Yes to confirm the end of diagnostics session.

Recovery tool: The Recovery tool contains two options:
• Restore C Drive: Restore recovery image (only C: drive)
• Restore Full Hard Drive: Restore recovery image (full hard drive).
You can use these tools to restore the Recovery Image from the hidden partition, and perform a full hard drive recovery. Please refer to instructions above for details on how to create a Recovery Image.

Restore the Recovery Image from Hidden Partition

1. Click [Restore C: drive] from Recovery and Utility tools
2. The progress bar is followed by “Restore Recovery image (only C: drive)” screen confirming that the Image will be restored to the C: drive. Click Next.
3. Read the instruction screen and select Agree, then click Next.
4. Click OK to acknowledge the warning message to restore recovery image to the C: drive.
5. When the progress bar appears, wait for the process to complete.
6. Click Finish when the process completes; the computer will restart to Windows.
7. Follow the steps listed in the “Auto Installation support for software packages from hidden partition” section.
8. Download FSDM (Fujitsu Software Download Manager) from the support site and download all the software applicable to the model and OS using FSDM.
9. Follow the steps listed in “Auto Installation support for software packages downloaded from support website” section.
RECOVER YOUR SYSTEM WHEN THE HARD DRIVE IS NOT BOOTABLE

Restore the Recovery Image for Full Hard Drive

Follow the steps in the “Recovering your Recovery Image using Recovery and Utility (for new hard drive or non-bootable hard drive)” section. You will need the Bootable Disk and the Recovery Disk Set for this task.

Utility tool: If applicable for your region, the Utility tool contains two options: Hard Disk Data Delete and Partition Creation.

The Hard Disk Data Delete utility is used to delete all data on the hard disk and prevent the data from being reused.

NOTE: Do not use the Hard Disk Data Delete utility unless you are absolutely certain that you want to erase your entire hard disk, including all partitions.

To delete hard disk data:

1. Click the Hard Disk Data Delete button. The progress bar appears, followed by the EULA screen.
2. Agree to the EULA and click Next.
3. Choose the hard disk from which the data should be deleted in the list of hard disks and click Next.

To run this utility: (This is not an option when using Windows 7.)

1. Click the Partition Creation button.
2. A progress bar appears, followed by the EULA screen. Agree to the EULA.
3. On the Recovery Tool - Partition Creation screen, move the slider to set disk size, and then click OK.
4. Click Yes in the Partition Creation confirmation dialog.

WARNING: It is highly recommended that you send your product to Fujitsu Service to replace a hard drive. A mistake could possibly destroy your computer, your new hard drive or both.
Recovering Your Recovery Image Using Recovery and Utility (for new hard drive or non-bootable hard drive)

If you have installed a new hard drive or your hard drive is not bootable, perform the following steps.

Note: You will need the Bootable disk and Recovery Image disk set for this recovery.

1. Power on your system. When the Fujitsu logo appears on the screen, press the Enter key.
2. Insert the bootable disk in your DVD drive, then click OK.
3. Highlight the CD/DVD option from the Boot Menu and press Enter.
4. Select CD/DVD boot mode: Select UEFI Mode, if applicable and press Enter. While the files are being loaded from the disk, the Fujitsu logo screen appears followed by a progress bar at the bottom of the screen.
5. Choose your language, if necessary.
   • For Windows 8.1: Select Restore full hard drive
   • For Windows 7: Select Restoring the Factory Image (full hard drive recovery)
7. Click Next to confirm full hard drive restoration. All data on HDD will be deleted.
8. Agree to EULA by selecting Agree option and clicking Next.
9. Click Next on the Recovery Disk Check screen to verify that the bootable disk has been inserted into the optical drive.
10. The Checking for Recovery Disk screen appears followed by the prompt to insert the first disk. Click OK to continue. Repeat this step for all disks. After all recovery disks have been checked and the check has been completed, click Next.
11. Follow the prompt to reinsert the first recovery disk and click Next.
12. Click OK when you receive the final warning informing you that all data on drive C will be lost. This starts the recovery process.
13. Follow the prompts to insert the next recovery disks and click OK.
14. After the copying of the image to the HDD completes the restore process is complete, click Finish to restart the system. The computer will restart automatically and then go through the first boot process.
15. Follow the steps listed in “Auto Installation support for essential access software from backup location” section.
16. Download FSDM (Fujitsu Software Download Manager) from support site and download all the software applicable to the model and OS using FSDM.
17. Follow the steps listed in “Auto Installation support for essential access software downloaded from support website.”
Installing the Software after the Recovery Image is Restored

Auto-installation support for essential access software from hidden partition

The below listed steps are applicable only in cases in which the recovery image restore and hidden partition contents have not been wiped out.

1. After the recovery image is restored, launch the desktop icon “Fujitsu Software Auto Installer”.
2. Double-click on “Fujitsu Software Auto Installer” desktop icon.
3. Click Yes on User Account Control Dialog box. This will take some time to process the software packages. A message will be displayed during this time, “Please wait while the content is being processed”.
4. If EULA is displayed for Fujitsu Software Auto Installer, accept the EULA, otherwise continue.
5. Then Fujitsu Software Auto Installer user interface will be launched providing ability to auto-install the essential access software on the system.
6. It is recommended that you install all the software in the listed order. You can Select All, to install the software in the order listed.
7. Click Install to start the installation.
8. After installing all the selected drivers, Installation Results window will be displayed. Click OK.
9. “You must restart the system for the settings to take effect. Do you wish to reboot now?” message appears. Select Yes.
10. The system will now reboot.
11. You can now connect to the internet and download FSDM (Fujitsu Software Download Manager) from the support site and download all the software applicable to the model and OS using FSDM if they are not downloaded yet.
Auto-installation support for essential access software from backup location

The below listed steps are applicable in cases in which a backup copy was created as mentioned in the section “Creating a Backup of essential access software”.

1. It is important to have the extracted Auto installer software package folder and Readme file in the same location as other software folders. Otherwise auto-installation of the software will not be supported.
2. Inside the Auto Installer software package, launch FjAutoinstall.exe as an Administrator.
3. Click Yes on the User Account Control dialog box. This will take some time to process the software packages. A message will be displayed during this time stating, “Please wait while the content is being processed”.
4. If EULA is displayed for Fujitsu Software Auto Installer, accept the EULA, otherwise continue.
5. The Fujitsu Software Auto Installer user interface will be launched providing ability to auto install the essential access software on the system.
6. It is recommended that you install all the software in the listed order. You can “Select All”, to install the software in the order listed.
7. Click the Install button to start the installation.
8. After installing all the selected drivers, Installation Results window is be displayed. Click OK.
9. “You must restart the system for the settings to take effect. Do you wish to reboot now?” message appears. Select Yes.
10. The system will now reboot.

Auto Installation support for the software downloaded from support website

1. Download FSDM (Fujitsu Software Download Manager) from the support site and download all the drivers applicable to the model and OS using FSDM if they are not downloaded yet.
2. When the software packages are downloaded from web, it is important to download the Auto Installer Software package and the model/language- specific Readme file if you prefer to auto install the software.
3. It is important to have the extracted Auto Installer software package folder and Readme file in the same location as other software folders. Otherwise auto-installation of the software will not be supported.
4. Inside the Auto Installer software package, launch FjAutoinstall.exe as administrator.
5. Click Yes on the User Account Control dialog box. This will take some time to process the software packages. A message will be displayed during this time stating “Please wait while the content is being processed”.
6. If EULA is displayed for Fujitsu Software Auto Installer, accept the EULA, otherwise continue.
7. The Fujitsu Software Auto Installer user interface will be launched providing the ability to auto install the software downloaded from support site.
8. It is recommended that you install all the software in the listed order. You can Select All, to install the software in the order listed.
9. Click the Install button to start the installation.
10. After installing all the selected drivers, the Installation Results window is displayed. Click OK.
11. “You must restart the system for the settings to take effect. Do you wish to reboot now?” message appears. Select Yes.
12. The system will now reboot.
Downloading Driver Updates

To ensure that you always have the most current driver updates related to your system, you should occasionally access the Fujitsu Software Download Manager (FSDM) utility. The FSDM utility is available from the Fujitsu Support site. FSDM will allow you to view and download a list of the most current drivers, utilities, and applications to determine whether you have the latest versions. To download the FSDM Utility, go to the Support Site: "http://support.fujitsupc.com/CS/Portal/support.do?srch=DOWNLOADS".

If you are planning on downgrading, upgrading or changing versions of your operating system during this process please see the User’s Guide for more information at "http://solutions.us.fujitsu.com".
