DECLARATION OF CONFORMITY

according to FCC Part 15

Responsible Party Name: Fujitsu PC Corporation
Address: 5200 Patrick Henry Drive
Santa Clara, CA 95054
Telephone: (408) 982-9500
Declarations: Base Model Configurations: LifeBook S-4546
Complies with Part 15 of the FCC Rules.

This device complies with Part 15 of the FCC rules. Operations are subject to the following two conditions:
(1) This device must not be allowed to cause harmful interference, (2) This device must accept any interference received, including interference that may cause undesired operation.
FCC Notices

Notice to Users of Radios and Television

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet that is on a different circuit than the receiver.
- Consult the dealer or an experienced radio/TV technician for help.

Shielded interconnect cables must be employed with this equipment to ensure compliance with the pertinent RF emission limits governing this device.

Notice to Users of the US Telephone Network

Your LifeBook may be supplied with an internal modem which complies with Part 68 of the FCC rules. On this LifeBook is a label that contains the FCC Registration Number and the Ringer Equivalence Number (REN) for this equipment among other information. If requested, the user must provide their telephone company with the following information:

1. The telephone number to which the LifeBook is connected.
2. The Ringer Equivalence Number (REN) for this equipment.
3. That the equipment requires a standard modular jack type USOC RJ-11C which is FCC Part 68 compliant.
4. The FCC Registration Number.

This equipment is designed to be connected to the telephone network or premises wiring using a standard modular jack type USOC RJ-11C which is FCC Part 68 compliant and a line cord between the modem and the telephone network with a minimum of 26AWG.

The REN is used to determine the number of devices that you may connect to your telephone line and still have all of those devices ring when your number is called. Too many devices on one line may result in failure to ring in response to an incoming call. In most but not all areas, the sum of the RENs of all of the devices should not exceed five (5). To be certain of the number of devices you may connect to your line, as determined by the RENs, contact your local telephone company.

If this equipment causes harm to the telephone network, your telephone company may discontinue your service temporarily. If possible, they will notify you in advance. If advance notice is not practical they will notify you as soon as possible. You will also be advised of your right to file a complaint with the FCC.

This fax modem also complies with fax branding requirements per FCC Part 68.

Your telephone company will probably ask you to disconnect this equipment from the telephone network until the problem is corrected and you are sure that the equipment is not malfunctioning. This equipment may not be used on coin-operated telephones provided by your telephone company. Connection to party lines is subject to state tariffs. Contact your state’s public utility commission, public service commission or corporation commission for more information.

This equipment includes automatic dialing capability. When programming and/or making test calls to emergency numbers:

- Remain on the line and briefly explain to the dispatcher the reason for the call.
- Perform such activities in off-peak hours, such as early morning or late evening.

FCC rules prohibit the use of non-hearing aid compatible telephones in the following locations or applications:

- All public or semipublic coin-operated or credit card telephones.
- Elevators, highways, tunnels (automobile, subway, railroad or pedestrian) where a person with impaired hearing might be isolated in an emergency.
- Places where telephones are specifically installed to alert emergency authorities such as fire, police or medical assistance personnel.
- Hospital rooms, residential health care facilities, convalescent homes and prisons.
- Workstations for the hearing impaired.
- Hotel, motel or apartment lobbies.
- Stores where telephones are used by patrons to order merchandise.
- Public transportation terminals where telephones are used to call taxis or to reserve lodging or rental cars.
- In hotel and motel rooms as at least ten percent of the rooms must contain hearing aid compatible telephones or jacks for plug-in hearing aid compatible telephones which will be provided to hearing impaired customers on request.
DOC (Industry Canada) Notices

Notice to Users of Radios and Television
This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

CET appareil numérique de la class B respecte toutes les exigence du Règlement sur le matériel brouilleur du Canada.

Notice to Users of the Canadian Telephone Network
The Canadian Industry Canada label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational, and safety requirements. The Department does not guarantee the equipment will operate to the user’s satisfaction.

LifeBook computers are supplied with an internal modem which complies with the Industry Canada certification standards for telecommunication network protection and safety requirements. Before connecting this equipment to a telephone line the user should ensure that it is permissible to connect this equipment to the local telecommunication facilities. The user should be aware that compliance with the certification standards does not prevent service degradation in some situations.

Repairs to telecommunication equipment should be made by a Canadian authorized maintenance facility. Any repairs or alterations not expressly approved by Fujitsu PC Corporation or any equipment failures may give the telecommunication company cause to request the user to disconnect the equipment from the telephone line.

The connecting arrangement code for this equipment is CA11A.

The Load Number assigned to each telephone terminal device denotes the percentage of the total load to be connected to a telephone loop or circuit which is used by the device to prevent overloading. The termination on a loop may consist of any combination of devices such that the total of the load numbers of all devices does not exceed 100.

**CAUTION**

For safety, users should ensure that the electrical ground of the power utility, the telephone lines and the metallic water pipes are connected together. Users should NOT attempt to make such connections themselves but should contact the appropriate electric inspection authority or electrician. This may be particularly important in rural areas.

Avis Aux Utilisateurs Du Réseau Téléphonique Canadien

L’étiquette canadienne Industrie Canada identifie l’équipement certifié. Cette certification signifie que l’équipement satisfait certaines normes de protection, d’exploitation et de sécurité des réseaux de télécommunications. Le département ne garantit pas le fonctionnement de l’équipement à la satisfaction de l’utilisateur.

La série LifeBook e possède un modem interne conforme aux normes de certification d’Industrie Canada pour protéger les réseaux de télécommunications et satisfaire aux normes de sécurité. Avant de connecter cet équipement à une ligne téléphonique, l’utilisateur doit vérifier s’il est permis de connecter cet équipement aux installations de télécommunications locales. L’utilisateur est averti que même la conformité aux normes de certification ne peut dans certains cas empêcher la dégradation du service.

Les réparations de l’équipement de télécommunications doivent être effectuées par un service de maintenance agréé au Canada. Toute réparation ou modification, qui n’est pas expressément approuvée par Fujitsu PC Corp., ou toute défaillance de l’équipement peut entraîner la compagnie de télécommunications à exiger que l’utilisateur déconnecte l’équipement de la ligne téléphonique.

Le code d’arrangement de connexion de cet équipement est CA11A.

Le numéro de charge assigné à chaque terminal téléphonique indique le pourcentage de la charge totale pouvant être connecté à une boucle ou à un circuit téléphonique, utilisé par ce périphérique afin de prévenir toute surcharge. La terminaison d’une boucle peut être constituée de n’importe quelle combinaison de périphériques de sorte que le total de numéros de charge de tous les périphériques n’excède pas 100.

**AVERTISSEMENT**

Pour assurer la sécurité, les utilisateurs doivent vérifier que la prise de terre du service d’électricité, les lignes téléphoniques et les conduites d’eau métalliques sont connectées ensemble. Les utilisateurs NE doivent PAS tenter d’établir ces connexions eux-mêmes, mais doivent contacter les services d’inspection d’installations électriques appropriés ou un électricien. Ceci peut être particulièrement important en régions rurales.
UL Notice
This unit requires an AC adapter to operate. Use only UL Listed Class 2 Adapters with an output rating of 16 Vdc, with a current of 3.36A.

AC Adapter output polarity:

CAUTION
To reduce the risk of fire, use only #26AWG or larger telecommunications line cord.

For Authorized Repair Technicians Only

CAUTION
For continued protection against risk of fire, replace only with the same type and rating fuse.

CAUTION
Danger of explosion if Lithium (clock) battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instruction.

Preface
Preface

ABOUT THIS GUIDE

The LifeBook S Series from Fujitsu PC Corporation is a powerful notebook computer. It is powered by an Intel® Pentium® III microprocessor, has a built-in color display, a number of possible configurations, and brings the computing power of desktop personal computers (PCs) to a portable environment.

This manual explains how to operate your LifeBook's hardware and built-in system software. Your LifeBook is compatible with the IBM® PC AT.

The LifeBook S Series is a completely self-contained unit with an active-matrix (TFT) color LCD display. It has a powerful interface that enables it to support a variety of optional features.

Conventions Used in the Guide

Keyboard keys appear in brackets.
Example: [FN], [F1], [ESC], [ENTER] and [CTRL].

Pages with additional information about a specific topic are cross-referenced within the text.
Example: (See page xx.)

On screen buttons or menu items appear in bold
Example: Click OK to restart your LifeBook.

DOS commands you enter appear in Courier type.
Example: Shutdown the computer?

FUJITSU PC CONTACT INFORMATION

Service and Support

You can contact Fujitsu Service and Support in the following ways:
- Toll free: 1-800-8FUJITSU (1-800-838-5487)
- Fax: 1-901-259-5700
- E-mail: 8fujitsu@fujitsupc.com
- Web site: http://www.fujitsupc.com

Before you place the call, you should have the following information ready so that the customer support representative can provide you with the fastest possible solution:
- Product name
- Product configuration number
- Product serial number
- Purchase date
- Conditions under which the problem occurred
- Any error messages that have occurred
- Hardware configuration
- Type of device connected, if any

Fujitsu On-line

You can go directly to the on-line Fujitsu Product catalog for your LifeBook by clicking on the LifeBook Accessories Web site URL link, located in the Windows Start menu.

You can also reach Fujitsu Service and Support on-line by clicking on the Fujitsu Service and Support Web site URL link, located in the Service and Support Software folder of the Windows Start menu.

POINT

You must have an active internet connection to use the on-line URL links.

WARRANTY

Your LifeBook is backed by a one year International Limited Warranty and includes toll-free technical support. Check the service kit that came with your LifeBook for warranty terms and conditions.
Getting to Know Your LifeBook
Overview

This section describes the components of your Fujitsu S Series LifeBook. We strongly recommend that you read it before using your LifeBook – even if you are already familiar with notebook computers.

UNPACKING

When you receive your LifeBook, unpack it carefully, and compare the parts you have received with the items listed below.

For a pre-configured model you should have:

- LifeBook S Series (Figure 2-1)
- AC adapter with AC power cord (Figure 2-2)
- Port Replicator (Figure 2-3)
- External USB Floppy Disk Drive (Figure 2-4)
- Lithium ion battery, pre-installed
- Weight Saver
- Phone/Modem (RJ-11) telephone cable
- Driver and Application Restore CD
- Getting Started Guide
- User’s Guide (this document)
- International Limited Warranty Brochure
- First Cabin Registration card and envelope

Depending on your configuration, one of the following devices is installed in the Flexible Bay:

- Modular DVD drive
- Modular CD-RW drive

Once you have checked and confirmed that your LifeBook system is complete, read through the following pages to learn about all of your LifeBook’s components.
Locating the Controls and Connectors

TOP AND FRONT COMPONENTS
The following is a brief description of your LifeBook’s top and front components.

Display Panel Latch
The display panel latch locks and releases the display panel. (Figure 2-5)

Display Panel
The display panel is a color LCD panel with backlighting for the display of text and graphics. (Figure 2-5)

Built-in Microphone
The built-in microphone allows mono audio input. (Figure 2-5)

Status Indicator Panel
The Status Indicator Panel displays symbols that correspond with a specific component of your LifeBook. (Figure 2-5) (See Status Indicator Panel on page 12 for more information)

Suspend/Resume Button
The Suspend/Resume button allows you to suspend notebook activity without powering off, resume your LifeBook from suspend mode, and power on your LifeBook when it has been shut down from Windows. (Figure 2-5) (See Suspend/Resume Button on page 34 for more information)

Stereo Speakers
The built-in dual speakers allow for stereo sound. (Figure 2-5)

Closed Cover Switch
The closed cover switch turns off the LCD back lighting when the display panel is closed. (Figure 2-5)
Getting to Know Your LifeBook

Keyboard
A full-size keyboard with dedicated Windows keys. (Figure 2-5) (See Keyboard on page 15 for more information)

Touchpad Pointing Device
The Touchpad pointing device is a mouse-like cursor control with three buttons: two mouse-like buttons, and a scroll button. (Figure 2-5) (See Touchpad Pointing Device on page 17 for more information)

LifeBook Security/Application Panel
The LifeBook Security/Application Panel provides hardware security and one-touch application launch capability. (Figure 2-5) (See LifeBook Security/Application Panel on page 23 for more information)
LEFT-SIDE PANEL COMPONENTS
The following is a brief description of your LifeBook’s left-side components.

Flexible Bay
The Flexible Bay can accommodate one of the following devices. (Figure 2-6) (See Flexible Bay Devices on page 20 for more information)
- Modular DVD drive
- Modular CD-RW drive
- Modular CD-ROM drive
- Modular SuperDisk 120 drive
- Modular Lithium ion battery
- Modular PC Card slot adapter
- Modular Digital Bay Camera

Flexible Bay Eject Lever
The Flexible Bay eject lever releases the Flexible Bay device. (Figure 2-6)

Emergency CD Tray Release
The Emergency CD Tray Release allows you to open the CD tray without powering on your LifeBook. (Figure 2-6)

Anti-theft Lock Slot
The anti-theft lock slot allows you to attach an optional physical lock down device. (Figure 2-6)
RIGHT-SIDE PANEL COMPONENTS
The following is a brief description of your LifeBook’s right-side components.

**Headphone Jack**
The headphone jack allows you to connect headphones or powered external speakers. (Figure 2-7) (See Headphone Jack on page 54 for more information)

**Stereo Line-in Jack**
The stereo line-in jack allows you to connect an external audio source. (Figure 2-7) (See Stereo Line-In Jack on page 54 for more information)

**Microphone Jack**
The microphone jack allows you to connect an external mono microphone. (Figure 2-7) (See Microphone Jack on page 55 for more information)

**PC Card Slot**
The PC Card Slot allows you to install one Type II PC Card. (Figure 2-7) (See PC Cards on page 47 for more information)

**LAN (RJ-45) Jack**
The internal LAN (RJ-45) jack is used for an internal Fast Ethernet (10/100 Base-TX) connection. (Figure 2-8) (See Internal LAN (RJ-45) Jack on page 53 for more information)

**Modem (RJ-11) Telephone Jack**
The Modem (RJ-11) telephone jack is for attaching a telephone line to the internal multinational 56K modem. (Figure 2-7) (See Modem (RJ-11) Telephone Jack on page 53 for more information)

**USB Port**
The USB port allows you to connect Universal Serial Bus devices. (Figure 2-8) (See Universal Serial Bus Port on page 54 for more information)

**WARNING**
The internal modem is not intended for use with Digital PBX systems. Do not connect the internal modem to a Digital PBX as it may cause serious damage to the internal modem or your entire LifeBook. Consult your PBX manufacturer’s documentation for details. Some hotels have Digital PBX systems. Be sure to find out BEFORE you connect your modem.

**CAUTION**
The internal multinational modem is designed to the ITU-T V.90 standard. Its maximum speed of 53000bps is the highest allowed by FCC, and its actual connection rate depends on the line conditions. The maximum speed is 33600bps at upload.

For additional information about the multinational modem, refer to the Fujitsu web site at:
www.fujitsupc.com/modems
BACK PANEL COMPONENTS
Following is a brief description of your LifeBook's back panel components.

Infrared Port
The fast IrDA compatible port allows you to communicate with another IrDA compatible infrared device without a cable. (Figure 2-8) (See Infrared Port on page 54 for more information)

External Monitor Port
The external monitor port allows you to connect an external monitor. (Figure 2-8) (See External Monitor Port on page 55 for more information)

DC Power Jack
The DC power jack allows you to plug in the AC adapter or the optional Auto/Airline adapter to power your LifeBook and charge the internal Lithium ion battery. (Figure 2-8)

Power Switch
This switch is the main power switch for your LifeBook. (Figure 2-8)

USB Port
The USB port allows you to connect Universal Serial Bus devices. (Figure 2-8) (See Universal Serial Bus Port on page 54 for more information)
BOTTOM COMPONENTS
The following is a brief description of your LifeBook’s bottom panel components.

Port Replicator Connector
This connector allows you to connect the Port Replicator to your LifeBook. (Figure 2-9)

Memory Upgrade Compartment
Your LifeBook comes with high speed Synchronous Dynamic RAM (SDRAM). The memory upgrade compartment allows you to expand the system memory capacity of your LifeBook, hence improving overall performance. (Figure 2-9) (See Memory Upgrade Module on page 49 for more information)

Lithium ion Battery Bay Lock Button
Slide this lock button to lock/unlock the internal battery. (Figure 2-9)

Lithium ion Battery Bay Release Button
Slide the release button to release the internal battery. (Figure 2-9)

Lithium ion Battery Bay
The battery bay contains the internal Lithium ion battery. It can be opened for the removal of the battery when stored over a long period of time or for swapping a discharged battery with a charged Lithium ion battery. (Figure 2-9) (See Lithium ion Battery on page 39 for more information)

Main Unit and Configuration Label
The configuration label shows the model number and other information about your LifeBook. In addition, the configuration portion of the label has the serial number and manufacturer information that you will need to give your support representative. It identifies the exact version of various components of your LifeBook. (Figure 2-9)
Status Indicator Panel

The Status Indicator displays symbols that correspond with a specific component of your Fujitsu LifeBook. These symbols tell you how each of those components are operating. *(Figure 2-10)*

**POWER INDICATOR**

The Power indicator symbol states whether your system is operational. It has several different states, each of which tells you what mode your LifeBook is in at that time.

- Steady On: This means that there is power to your LifeBook and that it is ready for use.
- Flashing: This means that your LifeBook is in Suspend mode.
- Steady Off: This means that your system is either in Save-to-Disk mode, or that your LifeBook has been turned off with the power switch.

If you are charging your battery, the Power indicator symbol will remain on even if your LifeBook is shut off. The Power indicator symbol will also remain on if you have either adapter connected and are shut down from Windows, but have not turned off the power switch.

**AC ADAPTER INDICATOR**

The AC Adapter indicator states whether your LifeBook is operating from the AC adapter, the Auto/Airline adapter or the batteries. This icon has two different states that can tell you what power source your LifeBook is using.

- On: This means that either of the adapters are currently in use.
- Off: Power is only coming from the batteries, and you do not have an adapter connected.

**BATTERY LEVEL INDICATORS**

The two Battery Level indicators state whether or not the primary Lithium ion battery and/or the optional second Lithium ion battery are installed (Battery 1 refers to the primary Lithium ion battery, while Battery 2 refers to the Flexible Bay optional second battery). In addition, this symbol states how much charge is available within each installed battery. The symbol will only be displayed for a battery that is currently installed in your LifeBook. *(Figure 2-11)*
Getting to Know Your LifeBook

Battery Level Indicator

Battery Charging Indicators
Located to the left of each of the Battery Level indicators is a small arrow symbol. This symbol states whether that specific battery is charging. This indicator operates whether the power switch is in the On or Off position, and will flash if the battery is too hot or cold to charge.

CAUTION
A shorted battery is damaged and must be replaced. (Figure 2-11)

CAUTION
Batteries subjected to shocks, vibration or extreme temperatures can be permanently damaged.

DVD/CD-RW/CD-ROM Drive Access Indicator
The DVD/CD-RW/CD-ROM Access indicator tells you that the DVD/CD-RW/CD-ROM drive is being accessed. If the Auto Insert Notification function is active, the indicator will flash periodically when your system is checking the DVD/CD-RW/CD-ROM drive. If the Auto Insert Notification function is not active, the indicator will only flash when you access the DVD/CD-RW/CD-ROM drive. The default setting is the Auto Insert Notification function active. (See Auto Insert Notification Function on page 45 for more information)

POINT
The Windows 98 Second Edition DVD/CD-RW/CD-ROM Auto Insert Notification function will periodically check for a DVD/CD-RW/CD-ROM installed in the drive, causing the DVD/CD-RW/CD-ROM Access indicator to flash. The DVD/CD-RW/CD-ROM Auto Insert Notification function allows your system to automatically start a DVD/CD-RW/CD-ROM as soon as it is inserted in the drive and the tray is closed. It will begin playing an audio DVD/CD or will start an application if the DVD/CD has an auto-run file. (See Auto Insert Notification Function on page 45 for more information)

HARD DRIVE OR REMOVABLE MEDIA DRIVE ACCESS INDICATOR
The Hard Drive Access indicator states whether your internal hard drive or optional second hard drive is being accessed.

POINT
The Hard Drive Access indicator does not show which hard drive is being accessed.

FLOPPY/SUPERDISK DRIVE ACCESS INDICATOR
The Floppy/SuperDisk Drive Access indicator states whether the floppy disk or SuperDisk drive is being accessed. This indicator will flash if your software tries to access a disk even if no floppy disk drive is installed. (See External Floppy Disk Drive on page 41 for more information)

PC CARD ACCESS INDICATORS
The PC Card Access indicators state whether or not your LifeBook is accessing a PC Card. The first icon represents the PC Card slot; the second icon represents a PC Card slot located in the Flexible Bay. The indicators will flash if your software tries to access a PC Card even if there is no card installed. (See PC Cards on page 47 for more information)

NUMLK INDICATOR
The NumLk indicator states that the internal keyboard is set in ten-key numeric keypad mode.
POINTER

If you are using the optional external numerical keypad, pressing the [NumLk] key will activate the external keypad. The indicator will come on, however it will not change any of the functionality of your keyboard keys.

CAPSLOCK INDICATOR
The CapsLock indicator states that your keyboard is set to type in all capital letters.

SCRLK INDICATOR
The ScrLk indicator states that your scroll lock is active.

SECURITY INDICATOR
The Security Indicator flashes (if a password was set) when the system resumes from Off or Suspend modes. You must enter the password that was set in the Security Panel before your system will resume operation.
Getting to Know Your LifeBook

Keyboard

USING THE KEYBOARD
Your Fujitsu LifeBook has an integral 82-key keyboard. The keys perform all the standard functions of a 101-key keyboard, including the Windows keys and other special function keys. This section describes the following keys. (Figure 2-12)

- Numeric keypad: Your LifeBook allows certain keys to serve dual purposes, both as standard characters and as numeric and mathematical keys. The ability to toggle between the standard character and numerical keys is controlled through the [NumLk] key.
- Cursor keys: Your keyboard contains four arrow keys for moving the cursor or insertion point to the right, left, up, or down within windows, applications and documents.
- Function keys: The keys labeled [F1] through [F12], are used in conjunction with the [FN] key to produce special actions that vary depending on what program is running.
- Windows keys: These keys work with your Windows operating system and function the same as the onscreen Start menu button, or the right button on your pointing device.

NUMERIC KEYPAD
Certain keys on the keyboard perform dual functions as both standard character keys and numeric keypad keys. NumLk can be activated by pressing the [NumLk] keys. Turning off the NumLk feature is done the same way. Once this feature is activated you can enter numerals 0 through 9, perform addition (+), subtraction (-), multiplication (*), or division (/), and enter decimal points (.) using the keys designated as ten-key function keys. The keys in the numeric keypad are marked on the front edge of the key to indicate their secondary functions. (Figure 2-12)

POINT
If you are using the optional external numerical keypad, pressing the [NumLk] key will activate the external keypad. The indicator will come on, however it will not change any of the functionality of your keyboard keys.

WINDOWS KEYS
Your LifeBook has two Windows keys, consisting of a Start key and an Application key. The Start key displays the Start menu. This button functions the same as your onscreen Start menu button. The Application key functions the same as your right mouse button and displays shortcut menus for the selected item. (Please refer to your Windows documentation for additional information regarding the Windows keys.) (Figure 2-12)

CURSOR KEYS
The cursor keys are the four arrow keys on the keyboard which allow you to move the cursor up, down, left and right in applications. In programs such as Windows Explorer, it moves the “focus” (selects the next item up, down, left, or right). (Figure 2-12)
FUNCTION KEYS

Your LifeBook has 12 function keys, F1 through F12. The functions assigned to these keys differ for each application. You should refer to your software documentation to find out how these keys are used. (Figure 2-12)

The [FN] key provides extended functions for the LifeBook and is always used in conjunction with another key.

- [FN+F3]: Pressing [F3] while holding [FN] will toggle the Audio Mute on and off.
- [FN+F4]: Pressing [F4] while holding [FN] will toggle the Glide Point feature on and off.
- [FN+F5]: Pressing [F5] while holding [FN] allows you to toggle between video compensation and no compensation. (Video compensation controls spacing on the display. When it is enabled, displays with less than 1024 x 768 or 800 x 600 pixel resolution will still cover the entire screen.)
- [FN+F6]: Pressing [F6] repeatedly while holding [FN] will lower the brightness of your display.*
- [FN+F7]: Pressing [F7] repeatedly while holding [FN] will increase the brightness of the display.*
- [FN+F8]: Pressing [F8] repeatedly while holding [FN] will decrease the volume of your LifeBook.**
- [FN+F9]: Pressing [F9] repeatedly while holding [FN] will increase the volume of your LifeBook.**
- [FN+F10]: Pressing [F10] while holding [FN] allows you to change your selection of where to send your display video. Each time you press the combination of keys you will step to the next choice. The choices, in order, are: built-in display panel only, both built-in display panel and external monitor or external monitor only.

* There are eight brightness levels.
** There are 17 audio levels.
Getting to Know Your LifeBook

Figure 2-13 Touchpad pointing device

Touchpad Pointing Device

The Touchpad pointing device comes built into your Fujitsu LifeBook. It is used to control the movement of the pointer to select items on your display panel. The Touchpad is composed of a cursor control, a left and right button, and a scrolling button. The cursor control works the same way a mouse does, and moves the cursor around the display. It only requires light pressure with the tip of your finger. The left and right buttons function the same as mouse buttons. The actual functionality of the buttons may vary depending on the application that is being used. The scrolling button allows you to navigate quickly through pages, without having to use the scroll bars. (Figure 2-13)

DOUBLE-CLICKING

Double-clicking means pushing and releasing the left button twice in rapid succession. This procedure does not function with the right button. To double-click, move the cursor to the item you wish to select, press the left button twice, and then immediately release it. You also have the option to perform the double-click operation by tapping lightly on the Touchpad twice. (Figure 2-15)

CLICKING

Clicking means pushing and releasing a button. To left-click, move the cursor to the item you wish to select, press the left button once, and then immediately release it. To right-click, move the mouse cursor to the item you wish to select, press the right button once, and then immediately release it. You also have the option to perform the clicking operation by tapping lightly on the Touchpad once. (Figure 2-14)

POINT

An external mouse can be connected to either the USB or PS/2 port on your LifeBook or port replicator, and used simultaneously with the Touchpad. However, if you boot the system with an external mouse connected the Touchpad will be disabled or enabled depending on the specifications in your BIOS settings. (See BIOS Setup Utility on page 31 for more information)

POINT

If the interval between clicks is too long, the double-click will not be executed.
**DRAGGING**

Dragging means pressing and holding the left button, while moving the cursor. To drag, move the cursor to the item you wish to move. Press and hold the left button while moving the item to its new location and then release it. Dragging can also be done using the Touchpad. First, tap the Touchpad twice over the item you wish to move making sure to leave your finger on the pad after the final tap. Next, move the object to its new location by moving your finger across the Touchpad, and then release your finger. (Figure 2-16)

![Figure 2-16 Dragging](image)

**TOUCHPAD CONTROL ADJUSTMENT**

The Windows Control Panel allows you to customize your Touchpad with selections made from within the Mouse Properties dialog box.

**SCROLLING**

Using the Scrolling button allows you to navigate through a document quickly without using the window’s scroll bars. This is particularly useful when you are navigating through on-line pages. To use the Scrolling button, press the crescent shape at the top or bottom of the button to scroll up or down a page. When you have reached the desired section of the page, release the button. (Figure 2-17)

![Figure 2-17 Scrolling](image)
Volume Control
Your Fujitsu LifeBook has multiple volume controls which interact with each other.

**CAUTION**
Any software that contains audio files will also contain a volume control of its own. If you install an external audio device that has an independent volume control, the hardware volume control and the software volume control will interact with each other. It should be noted that if you set your software volume to Off, you will override the external volume control setting.

**CONTROLLING THE VOLUME**
The volume can be controlled in several different ways:
- Volume can be set from within the Volume Control on the Taskbar.
- Volume can be controlled with the F8 and F9 function keys. Pressing [F8] repeatedly while holding [FN] will decrease the volume of your LifeBook. Pressing [F9] repeatedly while holding [FN] will increase the volume of your LifeBook.

**POINT**
There are seventeen levels through which the function keys cycle.

- Volume can be controlled by many volume controls that are set within individual applications.
- Certain external audio devices you might connect to your system may have hardware volume controls.

Each source discussed above puts an upper limit on the volume level that must then be followed by the other sources.
We recommend that you experiment with the various volume controls to discover the optimal sound level.
Flexible Bay Devices

Your Fujitsu LifeBook contains a Flexible Bay. The Flexible Bay can accommodate a modular DVD drive, CD-ROM drive, CD-RW drive, SuperDisk drive, Lithium ion battery, modular PC Card slot adapter, modular Digital Bay Camera and weight saver. (Figure 2-18)

Your Flexible Bay will have one of the following devices installed. These devices are also optional and can be purchased separately. (Figure 2-19)

- Modular DVD drive: This allows you to access movies, software and audio DVD/CDs.
- Modular CD-ROM drive: This allows you to access both software and audio CDs.

The following are also Flexible Bay optional devices which can be purchased separately. (Figure 2-19)

- Modular CD-RW drive: This allows you to access both software and audio CDs as well as the ability to write to CDs.
- Modular SuperDisk drive: This is an optional 120MB floppy disk drive made by Imation, for use with your LifeBook.
- Modular PC Card slot adapter: This allows you to use an additional Type II PC Card.
- Modular Lithium ion battery: This is a rechargeable battery that can be used to power your LifeBook when an adapter is not connected.
- Weight Saver: This is used to fill the bay when no device is needed.
- Modular Digital Bay Camera: This is a Digital Camera that can be used to take digital stills or video.

REMOVING AND INSTALLING MODULAR DEVICES

There are two ways to remove and install modular devices in the Flexible Bay:

- Cold-swapping: swapping devices while your LifeBook is powered off.
- Hot-swapping: swapping devices while your system is active using BayManager™ software (Windows 98 only) or the Unplug/Eject icon from your desktop (Windows 2000).

WARNING

You should never leave your Flexible Bay empty when the LifeBook is in operation.
Cold-swapping
To cold-swap modular devices in your Flexible Bay follow these easy steps: (Figure 2-20)

1. Close any open files.
2. Shutdown your LifeBook.
3. Pull out the Flexible Bay eject lever. This will push your device out slightly, allowing you to remove the device.
4. Slide your device out until it is clear of the bay. This will require light force.

   ![Flexible Bay Eject Lever](image)

   Figure 2-20 Removing/Installing a device in the Flexible Bay

   (a) (b)

   (c) (d)

   Flexible Bay Eject Lever

CAUTION
Be careful when aligning and seating devices in the bay. If the fit is incorrect, you may damage the bay or the device. If the device does not move easily in the bay, remove it, and check for dirt or foreign objects. It will require a firm push to latch the device in place.

5. Slide the device you are installing into your LifeBook until it clicks into place.
6. It is now safe to turn your LifeBook back on.
7. You can now access and use the device.

Your LifeBook will automatically detect the new device and activate it within your system. The drive letters associated with the device will be created and listed under My Computer and Windows Explorer.

Hot-swapping with BayManager™ under Windows 98 Second Edition
BayManager™ provides a simple and powerful method of switching modular devices on your LifeBook without having to reboot. Windows 98 Second Edition does not natively support hot-swapping. With BayManager, you can swap modular devices while your OS is running, this is called hot-swapping.

Using BayManager
It's easy to swap modular devices on your LifeBook using BayManager. To hot-swap modular devices follow these steps:

1. Point your mouse on the BayManager icon on the Windows Taskbar in the lower right corner of your screen.
2. Double click the left mouse button to bring up the BayManager window.

   ![BayManager Icon](image)

   ![BayManager Window](image)

3. Click Remove/Swap or Insert button to change a device in the Flexible Bay.
4. A message appears telling you that it is safe to swap devices.
5. Swap the modular devices.
6. Click OK button.
7. You can access and use the device when the “System Device change” message goes away.

Your LifeBook will automatically detect the new device and activate it within your system. The drive letters associated with the device will be created and listed under My Computer and Windows Explorer.

Key Information About BayManager
You can see the type of device present in the Flexible Bay by pointing at the BayManager icon on the Taskbar or in the Storage Device tab of BayManager Properties. Information about the device appears as follows:

- Built-in CD-ROM/CD-RW/DVD drive: Identified as "CD-ROM"
- Built-in SuperDisk or a second hard disk drive: Identified as "DiskDrive"
- Built-in floppy disk drive (FDD), FDD connected via specific connector on the connector box, or USB FDD: Identified as "Floppy"

Tips About Using BayManager
- If you have BayManager installed in your computer, and want to enable Direct Memory Access (DMA) to a bay device, click the device icon on the Storage Devices tab of the BayManager dialogue box to check DMA. Note that not all devices support DMA.
Before running the software to swap or remove the current Flexible Bay device, be sure to close all the other applications that could be using the current bay device.

If you swapped or inserted your Flexible Bay device with My Computer or Windows Explorer opened, click View, and then click Refresh.

The Copy Disk utility for the built-in SuperDisk cannot be used if BayManager is installed. To work around this limitation, perform the following steps: (Note that in order to copy SuperDisk media, your memory size must be greater than the size of the SuperDisk media.)

- Create an empty folder on your C: drive to which you will copy the files.
- Open the SuperDisk files using My Computer or Windows Explorer.
- Click Edit/Select All.
- Copy all the files to the newly-created folder.
- Swap the disk with an empty formatted disk.
- Copy all the files from the new folder to the empty disk.

If you have BayManager installed in your LifeBook, and insert a SuperDisk into its drive on the Flexible Bay, the disk will indicate Removable Disk on the screen; this phenomenon does not affect your operations adversely.

If you are running Adaptec Easy CD Creator, and want to swap or remove the current multi-bay device, close Adaptec Easy CD Creator, wait for about 30 seconds, then do the swapping or removal.

After you swap or insert your Flexible Bay device, the CD-ROM or DVD Autorun might stop. To work around this problem, go to My Computer and double-click the icon for CD-ROM or DVD drive.

If a LifeBook with a USB FDD connected is put on Standby, the drive letter for the FDD might change (from A:) after the computer is brought out of the power saving state. This phenomenon does not affect operations adversely.

If Windows is started on a LifeBook with an external USB FDD connected, an icon for the FDD might not appear in My Computer or Windows Explorer. If you encounter this problem, remove the FDD from your computer, then reconnect it.

Wait about 30 seconds after Windows 98 Second Edition boots up or resumes from Standby/Hibernation before using BayManager.

If the FDD (A:) is not shown in My Computer or Windows Explorer even if the FDD is connected, please execute [Insert] by using BayManager.

If you remove a CD-RW drive, you may hear a noise; this phenomenon does not affect your operations adversely.

If you have BayManager installed in your computer, and want to use an ATA Flash or similar PC Card, do the following:

1. In the Control Panel window, double-click the System icon.
2. From the Device Manager tab, select Computer, then click Properties.
3. From the Reserve Resources tab, click Input/Output (I/O).
4. Click Add.
5. Type 170 in the Start Value box, and 177 in the End Value box. Click OK.
6. Click OK in the Computer Properties window.
7. Click OK in the System Properties window.

If you have BayManager installed in your computer, and want to use a USB Audio device (e.g., USB speakers), disconnect the USB Audio before you insert a PCMCIA card.

Hot-swapping under Windows 2000 Professional

Under Windows 2000 Professional, hot-swapping is provided through the Unplug or Eject Hardware utility. The icon for the utility appears on the taskbar.
Getting to Know Your LifeBook

Figure 2-21  LifeBook Security/Application Panel

LifeBook Security/Application Panel

A unique feature of your LifeBook is the Security/Application Panel that allows you to secure your LifeBook from unauthorized use. The Security/Application Panel also allows you to launch applications with a touch of a button when your system is on.

If the security system is activated, upon starting your LifeBook or resuming from suspend mode the security system requires you to enter a password code using the buttons on the Security/Application Panel. After entering a correct password, your LifeBook resumes system operation. (Figure 2-21)

SETTING UP YOUR LIFEBOOK SECURITY PANEL

When you receive your LifeBook, the security panel application is pre-installed without any passwords. The following sections will provide detailed information on your security panel, how to set, change or remove passwords.

Numbered Buttons

Use these buttons to enter your password. (Figure 2-21)

Enter Button

After entering the button strokes, push this button to enter the password into the LifeBook. (Figure 2-21)

PASSWORDS

The user and supervisor password may be set on this LifeBook. A supervisor password is typically the same for all LifeBooks in a working group, office, or company to allow for system management. Individual LifeBooks in a group environment should not use a common password. A password consists of one to five button strokes plus the enter button. A valid stroke consists of pushing one or up to four buttons simultaneously. The following are valid button strokes:

- Pushing [4] by itself
- Pushing [2] and [3] at the same time
- Pushing [1], [2], and [4] at the same time
- Pushing [1], [2], [3], and [4] at the same time

The following are valid passwords. The numbers within braces ( {  } ) are button strokes using more than one button.

- {[2]+[3]}, [1], [enter]
- [4], [enter]
- {[1]+[3]}, {[2]+[3]+[4]}, [1], [4], [2], [enter]

Setting Passwords

When shipped from the factory, no passwords are set. You have a choice of having no password or setting a supervisor and user password. You must set the supervisor password before the user password.

POINT

The purpose of supervisor password is to be able to bypass the user password in case the user password is forgotten. The supervisor password alone will not lock the system.
Setting Supervisor Password
You must have set a supervisor password before setting any user passwords. The supervisor password can bypass the user password.
1. Go to the Start menu.
2. Click on Run.
3. Type in FJSEC.EXE, then press [Enter]
4. Follow the on-screen instructions to set the Supervisor password.

Setting User Password
1. Go to the Start menu.
2. Click on Programs.
3. Click on Security Panel Application and Set User Password.
4. Follow the on-screen instructions to set the user password.

Incorrect Password Entry
If an invalid supervisor or user password is entered three times in succession, the system will “beep” for about one minute. If a valid password is entered within a minute (while system beeps), the beeping will stop and the LifeBook will resume normal operation. If no or an invalid password is entered while the system beeps, the system will return to its previous locked state (suspend or off) and the Security Indicator will go off. To reactivate the LifeBook after a password failure, you must press the Suspend/Resume button, then enter a correct password.

OPERATING YOUR LIFEBOOK SECURITY/APPLICATION PANEL
The security lock feature is in effect both when the system resumes from Off or suspend state. You always need to push the Suspend/Resume button to input the user password. Your system will not begin the boot sequence without entering your supervisor/user password.

From Off State
1. Turn on your system.
2. When the Security Indicator flashes, enter the password and press Enter button.
   For example, if the password is 22222, Press Button Number 2 five times and press Enter button.
   The LifeBook will boot to normal operation.

From Suspend State
1. Press your Suspend/Resume button.
2. When the Security Indicator flashes, enter the password and press Enter button.
   The LifeBook should resume normal operation.

OPERATING YOUR LIFEBOOK SECURITY/APPLICATION PANEL
The security lock feature is in effect both when the system resumes from Off or suspend state. You always need to push the Suspend/Resume button to input the user password. Your system will not begin the boot sequence without entering your supervisor/user password.

From Off State
1. Turn on your system.
2. When the Security Indicator flashes, enter the password and press Enter button.
   For example, if the password is 22222, Press Button Number 2 five times and press Enter button.
   The LifeBook will boot to normal operation.

From Suspend State
1. Press your Suspend/Resume button.
2. When the Security Indicator flashes, enter the password and press Enter button.
   The LifeBook should resume normal operation.

PRECAUTIONS
Opening and Closing the Cover
Closing the cover automatically places the LifeBook into suspend mode. Opening the cover does not automatically place the LifeBook into normal operation. Instead, you must enter the proper security password after pushing the Suspend/Resume button.

Low Battery Operations
If your LifeBook has low battery, pushing the suspend/resume button only turns on the Security Indicator. Your LifeBook does not unlock, the Security Indicator turns off after one minute. To resume normal operation, first attach a power supply to the LifeBook. Then you may unlock the LifeBook.

UNINSTALLING THE SECURITY PANEL APPLICATION
You have two options when uninstalling the security panel application:
- Uninstall the security panel application software. This will disable all security feature.
- Uninstall the security panel application with password still active. This will not allow any changes to the password.

Uninstalling the Security Panel Application Software
Remove passwords when User wants no password protection whatsoever and doesn’t want to give anybody the utility to set a password on their computer. In this case, if passwords (supervisor, user, or both) are set, the passwords must first be cleared BEFORE removing the application. To clear passwords, follow same procedure in SETTING PASSWORD CODES except this time,
Getting to Know Your LifeBook

Removing Security Panel Application with Passwords Still Active
Using this feature will not allow any changes to the password.

User:
1. Go to Start Menu, Click on Control Panel.
2. Open Add/Remove Programs Properties in the Control Panel.
3. Select the Security Panel Application in the list, and click Add/Remove.
4. When the Confirm File Deletion box appears, click Yes.

Supervisor:
1. Go to Start Menu, Click on Control Panel.
2. Open Add/Remove Programs Properties in the Control Panel.
3. Select the Security Panel Application for Supervisor in the list, and click Add/Remove.
4. When the Confirm File Deletion box appears, click Yes.

Reinstalling the Security/Application Panel
To reinstall supervisor or user security application, you will need your Drivers and Utilities CD. The Secpanel folder located in the Utilities\Security Panel contains the setup files for supervisor and user security application.

Supervisor and user passwords can be set by the Windows Software which are FJSECS.EXE and FJSECU.EXE respectively. FJSECU.EXE for user password cannot run without supervisor password. First you need to run FJSECS.EXE to set supervisor password before setting user password. Follow instructions under Setting Passwords.

If you forget both passwords, please contact Fujitsu PC Corporation Service and Support at 1-800-838-5487. Fujitsu PC Corporation charges a service fee for unlocking a password restricted LifeBook. When calling please have a valid credit card and provide proof of ownership. You will then be given instructions on where to ship your LifeBook.

LAUNCHING APPLICATIONS WITH THE SECURITY/APPLICATION PANEL
The security panel also enables you to launch applications with the touch of a button when your system is on. Pressing any of the buttons will launch a user-defined application. Your LifeBook is pre-installed with software utilities that let you operate and configure your LifeBook Security/Application Panel. These utilities are found under the Start menu, under Programs, then under LifeBook Application Panel. They include Application Panel Setup, Application Panel Guide, Activate Panel and Deactivate Panel.

Configuring your LifeBook Application Panel
When you start Windows, the LifeBook Application Panel is automatically activated. An icon resembling a finger pressing a button will appear on the system tray (the indented portion of the status bar where the clock is displayed). When you see this icon you will know that LifeBook Application Panel is active.

As an application launcher, the LifeBook Application Panel is very flexible, giving you a variety of options. To set up the Panel to best suit your needs, we have provided the Application Panel Setup utility that quickly and easily helps you make the most of this valuable feature.

To configure your LifeBook Application Panel with Application Panel Setup:
1. Click on Start.
2. Click on Programs.
3. Click on LifeBook Application Panel.
4. Click on Application Panel Setup.

The Application Panel Setup utility will appear. There are tabs that correspond to the application buttons on the LifeBook Application Panel. When you receive your LifeBook, these buttons are pre-configured to launch specific programs, as referenced in Chapter 7 of this document.

Point
The tabs in Application Panel Setup may not be in the same order as the buttons on your LifeBook, please select the tab you wish to change carefully.

To change an application associated with the Application buttons, click on the tab for the button you would like to reconfigure – for example, Application 1. Click on
Browse from Start Menu, scroll down the list of applications, click on the application you wish to launch with this button, and then click OK. The button will now launch the new application.

The Internet tab is different. It comes set to launch your Windows default Internet browser (Internet Explorer), unless you have changed this in Windows 98 Second Edition or Windows 2000 Professional. In order to reconfigure it to launch another program follow these easy steps:

1. Click on Other from the Internet browser box.
2. Click on Browse from Start Menu.
3. Scroll down the list of applications, and then click on the application you wish to launch with this button.
4. Click OK.

The button will now launch the new application. If you want to return to launching your Windows default Internet browser with this button, you need only click on “Default Internet Browser” from the Internet browser box. Be aware that you will erase the settings for the “other application”. If you wish to go back to launching the “other application” from this button, you will need to reconfigure it as described above.

Deactivating and Activating the LifeBook Application Panel
To deactivate the LifeBook Application Panel, follow these easy steps:

1. Click on Start.
2. Click on Programs.
3. Click on LifeBook Application Panel.
4. Click on Deactivate Panel.

To reactivate, follow the same procedure, except for step 4. Click on Activate Panel instead.

POINT
Every time you start Windows 98 Second Edition or Windows 2000 Professional the LifeBook Application Panel is activated, even if you deactivated it before you shut down.

POINT
If your system has dedicated one of the application launcher buttons to be an Internet launcher, the button can still be configured to launch any application you wish, not just an Internet browser.

When you have finished with Application Panel Setup click OK, and the new settings will take effect. You can reconfigure your LifeBook Application Panel as often as you like.
3
Getting Started
Power Sources

Your Fujitsu LifeBook has three possible power sources: a primary Lithium ion battery, an AC adapter or an optional Auto/Airline adapter.

CONNECTING THE POWER ADAPTERS

The AC adapter or optional Auto/Airline adapter provides power for operating your LifeBook and charging the batteries.

Connecting the AC Adapter
1. Plug the DC output cable into the DC power jack of your LifeBook.
2. Plug the AC adapter into an AC electrical outlet. (Figure 3-1)

Connecting the Optional Auto/Airline Adapter
1. Plug the DC output cable into the DC power jack on your LifeBook.
2. Plug the Auto/Airline adapter into the cigarette lighter of an automobile with the ignition key in the On or Accessories position.
   OR
3. Plug the Auto/Airline adapter into the DC power jack on an airplane seat.

Switching from AC Adapter Power or the Auto/Airline Adapter to Battery Power
1. Be sure that you have at least one charged battery installed.
2. Remove the AC adapter or the Auto/Airline adapter.

CAUTION

The Lithium ion battery is not charged upon purchase. Initially, you will need to connect either the AC adapter or the Auto/Airline adapter to use your LifeBook.
Display Panel

Your Fujitsu LifeBook contains a display panel that is backlit for easier viewing in bright environments and maintains top resolution through the use of active-matrix technology.

OPENING THE DISPLAY PANEL
1. Press the Display Panel latch. This releases the locking mechanism and raises the display slightly.
2. Lift the display backwards, being careful not to touch the screen, until it is at a comfortable viewing angle. (Figure 3-2)

ADJUSTING DISPLAY PANEL BRIGHTNESS
Once you have turned on your LifeBook, you may want to adjust the brightness level of the screen to a more comfortable viewing level. There are two ways to adjust the brightness, by using the keyboard or the power management utility.

Using the Keyboard
Adjusting the brightness using the keyboard changes the setting only temporarily.
- [FN+F6]: Pressing repeatedly will lower the brightness of your display.
- [FN+F7]: Pressing repeatedly will increase the brightness of the display.

Using the Power Management Utility
Adjusting the brightness using the Power Management changes the setting permanently.
1. Double-click the Battery icon in the lower right corner of your display. This will open the BatteryAid Properties dialog box.
2. Select the Power Control tab and adjust your LCD Backlighting to the desired level.
3. Click OK or Apply to permanently change the settings.

You may need to readjust the brightness level periodically depending on your operating environment.

Closing the Display Panel
1. Holding the edge of your display panel, pull it forward until it is flush with the body of your LifeBook.
2. Push down until you hear a click. This will engage the locking mechanism and prevent your display panel from opening unexpectedly.

POINT
If using AC power your brightness setting is set to its highest level by default. If using battery power your brightness settings is set to approximately mid-level by default.
**Starting Your LifeBook**

**POWER ON**

*Power Switch*

The power switch is used to turn on your LifeBook from its off state. Once you have connected your AC adapter or charged the internal Lithium ion Battery, you can power on your LifeBook. *(See figure 2-8 on page 10 for location)*

**CAUTION**

When you turn on your LifeBook be sure you have a power source. This means that at least one battery is installed and charged, or that the AC or Auto/Airline adapter is connected and has power.

Facing the rear of your LifeBook, move the power switch to the right, this is the On position. The power switch moved to the left is the Off position. When you are done working you can either leave your LifeBook in Suspend mode, *(See Suspend Mode on page 34 for more information)*, or you can turn it off. *(See Power Off on page 36 for more information)*

**CAUTION**

Do not carry your LifeBook around with the power on or subject it to shocks or vibration, as you risk damaging your LifeBook.

When you Power On your LifeBook, it will perform a Power On Self Test (POST) to check the internal parts and configuration for correct functionality. If a fault is found, your LifeBook will emit an audio warning and/or an error message will be displayed. *(See Power On Self Test Messages on page 69 for more information)* Depending on the nature of the problem, you may be able to continue by starting the operating system or by entering the BIOS setup utility and revising the settings.

After satisfactory completion of the Power On Self Test (POST), your LifeBook will load your operating system.

**CAUTION**

Never turn off your LifeBook during the Power On Self Test (POST) or it will cause an error message to be displayed when you turn your LifeBook on the next time. *(See Power On Self Test Messages on page 69 for more information)*

**BOOT SEQUENCE**

The procedure for starting-up your LifeBook is termed the Bootup sequence and involves your LifeBook’s BIOS. When your LifeBook is first turned on, the main system memory is empty, and it needs to find instructions to start up your LifeBook. This information is in the BIOS program. Each time you power up or restart your LifeBook, it goes through a boot sequence which displays a Fujitsu logo until your operating system is loaded.

During booting, your LifeBook is performing a standard boot sequence including a Power On Self Test (POST). When the boot sequence is completed without a failure and without a request for the BIOS Setup Utility, the system displays the operating system’s opening screen.

The boot sequence is executed when:

- You turn on the power to your LifeBook.
- You restart your LifeBook from the Windows Shut Down dialog box.
- The software initiates a system restart. Example: When you install a new application.
- You reset the system by pressing the three keys [CTRL+ALT+DEL].

**BIOS SETUP UTILITY**

The BIOS Setup Utility is a program that sets up the operating environment for your LifeBook. Your BIOS is set at the factory for normal operating conditions, therefore there is no need to set or change the BIOS’ environment to operate your LifeBook.

The BIOS Setup Utility configures:

- Device control feature parameters, such as changing I/O addresses and boot devices.
- System Data Security feature parameters, such as passwords.

**Entering the BIOS Setup Utility**

To enter the BIOS Setup Utility do the following:

1. Turn on or restart your LifeBook.
2. Press the [F2] key once the Fujitsu logo appears on the screen. This will open the main menu of the BIOS Setup Utility with the current settings displayed.
3. Press the [RIGHT ARROW] or [LEFT ARROW] key to scroll through the other setup menus to review or alter the current settings.

**BIOS Guide**

A guide to your LifeBook’s BIOS is available online. Please visit our service and support Web site at www.fujitsupc.com. Once there, click on the Self Help Center link, and select your LifeBook series from the pull-down menu. Once you have done that, select the heading BIOS Guides from the pull-down menu and
finally, select your specific unit’s BIOS number. If you are unsure of your LifeBook’s BIOS number, please refer to your packing slip.

**POINT**
If your data security settings require it, you may be asked for a password before the BIOS main menu will appear.

**BOOTING THE SYSTEM WITH WINDOWS 98 SECOND EDITION**

We strongly recommend that you do not attach any external devices and do not put a DVD/CD or floppy disk in any drive until you have gone through the initial power on sequence.

When you turn on your LifeBook for the first time, it will display a Fujitsu logo on the screen. If you do nothing the system will read the hard drive for the operating system software, flash the LifeBook configuration information on the screen, and then the Windows 98 Second Edition Welcome will begin.

Designed to accommodate the needs of users in many different countries, Windows 98 Second Edition needs to be configured the first time you use it. Windows 98 Second Edition has three parts:

- **Getting Started:** You have the opportunity to enter custom information for your configuration file and setup your modem so that your LifeBook will be prepared to dial out.
- **Registration:** Easy online registration for Windows 98 Second Edition with Microsoft, and for your LifeBook with Fujitsu PC Corporation.
- **Windows License Agreement and Final Settings:** You have the opportunity to review the Windows 98 Second Edition License Agreement and then your configuration file will be generated.

**POINT**
You may click Cancel at any time within this process to shutdown Windows 98 Second Edition. You may restart this process at any time in the future, but you must complete it in order to use your computer.

**Getting Started**

Read the instructions on the screens carefully and fill in the information as directed. You will be asked for such items as the language you wish to use, the country in which you live, your first and last name, and about how you dial out from where you will be using your LifeBook. For the modem settings, enter your current location information where you will be using your LifeBook. If you are not connected to a phone line and plan to register at a later time, you may click the Skip button, and you will go directly to the condition of use page.

Once you have setup your LifeBook to dial out, Windows 98 Second Edition will make a free telephone call which will test these settings. If the call is unsuccessful, you will be returned to the phone settings page where you may try to fix them. If you are unable to fix the settings please contact Fujitsu PC Service and Support. (See Fujitsu PC Contact Information on page 1 for more information) If you would simply like to move on, and register at a later time, you may click the Skip button, and you will go directly to the Condition of Use page.

**Registration**

If your connection is successful, you will go to the Registration Confirmation page. On this page simply enter the requested information, and then check the box at the bottom to register your copy of Windows 98 Second Edition with Microsoft. Once you have finished, click the Next button to continue.

**POINT**
If you do not register at this time you can do it later simply by double-clicking on the LifeBook Registration icon on your desktop and following the instructions.

You will then go through the Fujitsu registration process. Follow the instructions on the screens, and enter all of the necessary information. Be as specific as possible so that if you need help the service and support team will be able to serve you better.

**Final Settings**

The first part of your final settings is the Windows End User License Agreement. Read the agreement carefully. When you finish reading you must accept or reject the terms of the agreement and then click on the Next button.

**POINT**
If you reject the terms of the license agreement you will be asked to review the license agreement for information on returning to Windows 98 or to shut down your LifeBook.

**BOOTING THE SYSTEM WITH WINDOWS 2000 PROFESSIONAL**

We strongly recommend that you not attach any external devices and do not put a DVD/CD or floppy disk in any drive until you have gone through the initial power on sequence.
When you turn on your LifeBook for the first time, it will display a Fujitsu logo on the screen and then the Windows 2000 Professional setup screen will appear. The Windows 2000 Professional setup will prompt you through a series of screens. You will be asked to enter custom and computer information, user password, date and time, workgroup or computer domain and accept or reject the license agreement. Once you have entered all the information you will be asked to restart your computer.

REGISTERING YOUR LIFEBOOK

What are the benefits of registering?
You will receive an identification label for your LifeBook, which, if your LifeBook is ever lost, may help in getting it returned to you. You also receive priority Personal Identification Number (PIN) technical support access and useful product mailings. Proof of purchase is not required if you register within 30 days of your purchase.

How do I register?
With Windows, it is a part of the Windows Welcome process. If you do not register during the Welcome process you can double-click on the LifeBook Registration icon on your desktop and then follow the instructions. The LifeBook Registration icon is the only way to register Windows 2000 Professional.

You may also complete the pre-printed registration form and either:
- Fax to 1-800-511-9989
- Mail to:
  Fujitsu PC Corporation
  5200 Patrick Henry Drive
  Santa Clara, CA 95054
You may also register on our Web site:
- www.fujitsupc.com/support.
  You will need to be set up with an Internet Service Provider (ISP) to use this option.

INSTALLING CLICK ME!
The first time you boot up your system, you will see an icon on the desktop called Click Me!. When you click the Click Me! icon, your system will automatically build the icon tray in the bottom right of the screen. These icons provide links to utilities that you will frequently access.

Although the icon remains on the screen, you need invoke it only once. When you click Click Me!, the following pre-installed applications and utilities will be activated and appear on the taskbar:
- McAfee ActiveShield
- BatteryAid
- LifeBook Application Panel
- ATI Display Properties
- Alps Touchpad
- Softex BayManager (Windows 98 only)

POINT
Make sure you have connected a phone line to your modem before you use E-Registration.
Power Management

Your Fujitsu LifeBook has many options and features for conserving battery power. Some of these features are automatic and need no user intervention, such as those for the internal modem. However, others depend on the parameters you set to best suit your operating conditions, such as those for the display brightness. Internal power management for your LifeBook may be controlled from settings made in your operating system, pre-bundled power management application, or from settings made in BIOS setup utility.

Besides the options available for conserving battery power, there are also some things that you can do to prevent your battery from running down as quickly. For example, you can create an appropriate power saving profile, put your LifeBook into Suspend mode when it is not performing an operation, and you can limit the use of high power devices. As with all mobile, battery powered computers, there is a trade-off between performance and power savings.

SUSPEND/RESUME BUTTON

When your LifeBook is active, the Suspend/Resume button can be used to manually put your LifeBook into Suspend mode. Push the Suspend/Resume button when your LifeBook is active, but not actively accessing anything, and immediately release the button. You will hear two short beeps and your system will enter Suspend mode. (See figure 2-5 on page 6 for location)

If your LifeBook is suspended, pushing the Suspend/Resume button will return your LifeBook to active operation. You can tell whether or not your system is in Suspend mode by looking at the Power indicator. (See figure 2-5 on page 6) If the indicator is visible and not flashing, your LifeBook is fully operational. If the indicator is both visible and flashing, your LifeBook is in Suspend mode. If the indicator is not visible at all, the power is off or your LifeBook is in Save-to-Disk mode. (See Save-to-Disk Mode)

SUSPEND MODE

Suspend or Standby mode in Windows saves the contents of your LifeBook’s system memory during periods of inactivity by maintaining power to critical parts. This mode will turn off the CPU, the display, the hard drive, and all of the other internal components except those necessary to maintain system memory and allow for restarting. Your LifeBook can be put in Suspend mode by:

- Pressing the Suspend/Resume button when your system is turned on.
- Selecting Standby from the Windows Shut Down Down menu.

- Timing out from lack of activity.
- Allowing the battery to reach the Dead Battery Warning condition.

Your LifeBook’s system memory typically stores the file(s) on which you are working, open application(s) information, and any other data required to support the operation(s) in progress. When you resume operation from Suspend mode, your LifeBook will return to the point where it left off. You must use the Suspend/Resume button to resume operation, and there must be an adequate power source available, or your LifeBook will not resume.

CAUTION

If you are running your LifeBook on battery power, be aware that the battery continues to discharge while your LifeBook is in Suspend mode, though not as fast as when fully operational.

POINT

Disabling the Suspend/Resume button prevents it from being used to put your LifeBook in Suspend or Hibernation (Save-to-Disk) mode. The resume function of the button cannot be disabled.

CAUTION

The Suspend or Hibernation (Save-to-Disk) mode should not be used with certain PC Cards. Check your PC Card documentation for more information.

When PC Cards or external devices are in use, Hibernation (Save-to-Disk) mode cannot return to the exact state prior to suspension, because all of the peripheral devices will be re-initialized when the system restarts.

POINT

If your LifeBook is actively accessing information when you enter the Suspend or Hibernation (Save-to-Disk) mode, changes to open files are not lost. The files are left open and memory is kept active during Suspend mode or the memory is transferred to the internal hard drive during Hibernation mode.
Getting Started

HIBERNATION (SAVE-TO-DISK) FEATURE
The Hibernation feature saves the contents of your LifeBook’s system memory to the hard drive as a part of the Suspend/Resume mode. You can enable or disable this feature.

Enable or Disable the Hibernation Feature
The default settings is not enabled. To enable or disable the Hibernation feature follow these easy steps:

1. From the Start menu, select Settings, and then select Control Panel.
2. From the Control Panel select Power Options.
3. Select the Hibernate tab. Select the box to enable or disable this feature.

Using the Hibernation Feature
1. From the Start menu, select Settings, and then select Control Panel.
2. From the Control Panel select Power Options.
3. Select the Advanced tab. Select Hibernate from the pull down menu for Power buttons.

STANDBY MODE
Standby mode is one of the power management parameters. When Standby mode is activated, your LifeBook shits off the display and turns off the hard drive when there is no activity (keystroke, pointer action, sound generation, video display change, modem transmission or reception, etc.) on your LifeBook for the user selected time-out period. Any activity will cause your LifeBook to return to normal operation automatically. This feature is independent of the Suspend/Resume button.

DISPLAY TIMEOUT
The Video Timeout is one of the power management parameters. This feature saves power by turning off the display if there is no keyboard or pointer activity for the user selected timeout period. Any keyboard or pointer activity will cause the display to restart automatically. This feature is independent of the Suspend/Resume button and can be enabled and disabled in Windows and BIOS setup utility. (See BIOS Setup Utility on page 31 for more information)

HARD DISK TIMEOUT
The Hard Disk Timeout is another one of the power management parameters. This feature saves power by turning off the hard drive if there is no hard drive activity for the user selected timeout period. Any attempt to access the hard drive will cause it to restart automatically. This feature is independent of the Suspend/Resume button and can be enabled and disabled in Windows and BIOS setup utility. (See BIOS Setup Utility on page 31 for more information)

WINDOWS POWER MANAGEMENT
Power Management
The Power Management icon located in the Windows Control Panel allows you to configure some of the power management settings. For example, you can use the Power Management to set the timeout values for turning off the display and hard disks whether you are running the LifeBook on battery power or one of the adapters. The settings may also be changed in the BIOS. (See BIOS Setup Utility on page 31 for more information)

RESTARTING THE SYSTEM
If your system is on and you need to restart it, be sure that you use the following procedure.

1. Click the Start button, and then click Shut Down.
2. Select the Restart option from within the Windows Shut Down dialog box.
3. Click OK to restart your LifeBook. Your LifeBook will shut down and then reboot.

CAUTION
Turning off your LifeBook without exiting Windows or turning on your LifeBook within 10 seconds of the LifeBook being shut off may cause an error when you start the next time.

POINT
The main advantage of using the Hibernation (Save-to-Disk) function is that power is not required to maintain your data. This is particularly important if you will be leaving your LifeBook in a suspended state for a prolonged period of time. The drawback of using Hibernation mode is that it lengthens the power down and power up sequences and resets peripheral devices.

POINT
Windows 98 systems only: Hibernation (Save-to-Disk) mode requires allocating a significant amount of hard drive capacity for saving all system memory, which reduces your usable disk space. When you purchase your LifeBook it will have space allocated for the memory installed. If you upgrade the original system by adding a memory upgrade module without changing the size of your Save-to-Disk allocation you will get an error message when you try to activate Hibernation (Save-to-Disk) mode and it will not work. In Windows 98 Second Edition, use the PHDISK Utility to increase the size of the Save-to-Disk file, SAVE2DSK.BIN. You can download the Save-to-Disk File Allocation information from our Web site at www.fujitsupc.com. If you need help, contact your support representative.
POWER OFF

Before turning off the power by choosing Shut Down from the Windows 98 Second Edition or 2000 Professional Start menu, check that the Hard Drive, DVD, CD-ROM, CD-RW, PC Card and the Floppy Disk Drive Access indicators are all Off. (See figure 2-5 on page 6) If you turn off the power while accessing a disk or PC Card there is a risk of data loss. To ensure that your LifeBook shuts down without error, use the Windows shut down procedure.

CAUTION

Be sure to close all files, exit all applications, and shut down your operating system prior to turning off the power with the power switch. If files are open when you turn the power off, you will lose any changes that have not been saved, and may cause disk errors.

Using the correct procedure to shut down from Windows allows your LifeBook to complete its operations and turn off power in the proper sequence to avoid errors. The proper sequence is:

1. Click the Start button, and then click Shut Down.
2. Select the Shut Down option from within the Windows Shut Down dialog box.
3. Click OK to shutdown your LifeBook.
4. Move the power switch to the off position.

If you are going to store your LifeBook for a month or more see Care and Maintenance Section.
4

User-Installable Features
Lithium ion Battery

Your Fujitsu LifeBook has a Lithium ion battery that provides power for operating your LifeBook when no external power source is available. The battery is durable and long lasting, but should not be exposed to extreme temperatures, high voltages, chemicals or other hazards.

The Lithium ion battery operating time may become shorter if it is used under the following conditions:

- When used at temperatures that exceeds a low of 5°C or a high of 35°C. Extreme temperatures not only reduce charging efficiency, but can also cause battery deterioration. The Charging icon on the Status Indicator panel will flash when you try to charge a battery that is outside its operating temperature range. (See Battery Charging Indicators on page 13 for more information)
- When using a high current device such as a modem, DVD, CD-ROM, CD-RW drive, or the hard drive, using the AC adapter will conserve your battery life.

**CAUTION**

Actual battery life will vary based on screen brightness, applications, features, power management settings, battery condition and other customer preferences. DVD, CD-RW, CD-ROM, or hard drive usage may also have a significant impact on battery life. The battery charging capacity is reduced as the battery ages. If your battery is running low quickly, you should replace it with a new one.

**CAUTION**

Under federal, state, or local law it may be illegal to dispose of batteries by putting them in the trash. Please take care of our environment and dispose of batteries properly. Check with your local government authority for details regarding recycling or disposing of old batteries. If you cannot find this information elsewhere, contact your support representative at 1-800-8FUJITSU (1-800-838-5487).

**CAUTION**

Do not leave a faulty battery in your LifeBook. It may damage your AC adapter, optional Auto/Airline adapter, another battery or your LifeBook itself. It may also prevent operation of your LifeBook by draining all available current into the bad battery.

**RECHARGING THE BATTERIES**

If you want to know the condition of the primary Lithium ion battery, check the Battery Level indicator located on the Status Indicator panel. The indicator changes as the battery level changes.

The Lithium ion battery is recharged internally using the AC adapter or Auto/Airline adapter. To recharge the battery make sure the battery that needs to be charged is installed in your LifeBook and connect the AC or Auto/Airline adapter.

**POINTER**

Make sure that the Battery Charging indicator and the percentage charge is shown inside the Battery Level icon on the Status Indicator Panel.

There is no memory effect on the Lithium ion battery therefore you do not need to discharge the battery completely before recharging. The charge times will be significantly longer if your LifeBook is in use while the battery is charging. If you want to charge the battery more quickly, put your LifeBook into Suspend mode, or turn it off while the adapter is charging the battery. (See Power Management on page 34 for more information on Suspend mode and shutdown procedure)

**CAUTION**

Using heavy current devices such as Modem or frequent DVD/CD-RW/CD-ROM accesses may prevent charging completely.

**Low Battery State**

When the battery is running low, a low battery notification message will appear. If you do not respond to the low battery message, the batteries will continue to discharge until they are too low to operate. When this happens, your LifeBook will go into Suspend mode. There is no guarantee that your data will be saved once the LifeBook reaches this point.

**CAUTION**

Once the low battery notification message appears, you need to save all your active data and put your LifeBook into Suspend mode until you can provide a new power source. You should provide a charged battery, an AC power adapter, or Auto/Airline adapter as soon as possible.

**CAUTION**

When you are in Suspend mode there must always be at least one power source active. If you turn off the power with the power switch, or remove all power sources while your LifeBook is in Suspend mode, any data that has not been saved to the hard drive will be lost.
Dead Battery Suspend mode shows on the Status indicator just like the normal Suspend mode. Once your LifeBook goes into Dead Battery Suspend mode you will be unable to resume operation until you provide a source of power either from an adapter, or a charged battery. Once you have provided power, you will need to press the Suspend/Resume button to resume operation. In the Dead Battery Suspend mode, your data can be maintained for some time, but if a power source is not provided promptly, the Power indicator will stop flashing and go out, meaning that you have lost the data that was not stored. Once you provide power, you can continue to use your LifeBook while an adapter is charging the battery.

**Shorted Batteries**
The Status Indicator panel uses a symbol inside the battery outline of the Battery Level indicator to display the operating level available in that battery. *(See figure 2-11 on page 13)* If this display shows a Shorted Battery, it means that the battery is damaged and must be replaced so it does not damage any other parts of your LifeBook.

**REPLACING THE BATTERY**
With the purchase of an additional battery, you can have a fully charged spare to swap with one that is not charged. There are two ways to swap batteries, cold-swapping and warm-swapping:

**Cold-swapping Batteries**
To cold-swap batteries in your battery bay follow these easy steps: *(Figure 4-1)*

1. Have a charged battery ready to install.
2. Shut down your LifeBook and disconnect the AC adapter.
3. Unlock the battery bay using the lock button.
4. Slide the battery bay release button to open the bay.
5. Remove the battery from the bay.
6. Slide the new battery into the bay.
7. Close the bay and slide the battery bay release button back.
8. Plug in the AC adapter and turn the power on.

**Warm-swapping Batteries**
To warm-swap batteries in your battery bay follow these easy steps: *(Figure 4-1)*

1. Close any open files.
2. Put your LifeBook into suspend mode.
3. Unlock the battery bay using the lock button.
4. Slide the battery bay release button to open the bay.
5. Remove the battery from the bay.
6. Slide the new battery into the bay.
7. Close the bay and slide the battery bay release button back.
8. Press the Suspend/Resume button to return your LifeBook to normal operation.

**CAUTION**
If the Lithium ion battery connector is not fully seated, you may not be able to use your LifeBook or charge your battery.
External Floppy Disk Drive

Your LifeBook has an external floppy disk drive which can read and write information on removable 1.44MB and 720KB floppy disks.

LOADING A DISK
To load a disk into your disk drive, follow these easy steps:
1. Orient the disk so that its label is facing upwards and the shutter side is pointing towards the drive. (Figure 4-2)
2. Push the disk into the drive until the Eject button pops out and you hear a click.

EJECTING A DISK
To eject a disk from the disk drive, follow these easy steps:
1. Check that the Floppy Disk Drive Access indicator is inactive.
2. Press the Eject button. This will push your disk partially out of the drive.
3. Remove the disk.

PREPARING A DISK FOR USE
Before you can use a new disk, it needs to be prepared so your LifeBook knows where to store information. This preparation is called formatting or initializing a disk. You will need to format new disks, unless they are preformatted. (Please refer to your operating system manual for step-by-step instructions on formatting a disk)

To prevent accidental erasure of the data stored on a disk, slide the "write protect" tab until a small hole is exposed. This sets the disk into a protected state where nothing can be added or removed. If you want to add or remove data on a protected disk, slide the "write protect" tab to close the small hole. (Figure 4-3)

CAUTION
If you eject the disk while the Floppy Disk Drive Access indicator is active, there is a risk of damaging the data on the disk, the disk itself or even the disk drive.

CAUTION
Formatting a floppy disk that already contains data will erase all of the information on the disk.
SuperDisk™ 120 Drive

Your Fujitsu LifeBook has a SuperDisk drive, which can use either standard floppy disks or Super floppy disks (with a capacity of 120MB).

LOADING A DISK

To load a disk into your disk drive, follow these easy steps:

1. Orient the disk so that its label is facing upwards and the shutter side is pointing towards the drive. (Figure 4-4)
2. Push the disk into the drive until the Eject button pops out and you hear a click.

EJECTING A DISK

To eject a disk from the disk drive, follow these easy steps:

1. Check that the Floppy Disk Drive Access indicator is inactive.
2. Press the Eject button. This will push your disk partially out of the drive.
3. Remove the disk.

PREPARING A DISK FOR USE

Before you can use a new disk, it needs to be prepared so your LifeBook knows where to store information. This preparation is called formatting or initializing a disk. You will need to format new disks, unless they are preformatted. (Please refer to your operating system manual for step-by-step instructions on formatting a disk)

To prevent accidental erasure of the data stored on a disk, slide the “write protect” tab until a small hole is exposed. This sets the disk into a protected state where nothing can be added or removed. If you want to add or remove data on a protected disk, slide the “write protect” tab to close the small hole. (Figure 4-5)

SOFTWARE EJECT FOR SUPERDISK 120 DISKS

(with Windows 98 Second Edition pre-installed models only)

1. Put the cursor on the SuperDisk 120 drive in My Computer.
2. Right mouse click.
3. Select Eject.
Media Player Drive

Your Fujitsu LifeBook contains a media player drive which is either DVD player or a CD-RW player. A DVD player gives you access to movie, software, and audio DVD/CDs. A CD-RW player allows you to access software or audio CDs, and to write data onto recordable CDs.

MEDIA PLAYER SOFTWARE

**DVD Model only:** With the media player drive and Media Player software you can play DVD movies on your LifeBook. The media player includes controls which allow you to take full advantage of the features of a DVD movie, as well as standard features such as fast forward, fast reverse, pause, etc.

**CD-RW Model only:** With the media player drive, you can read audio CDs, and write data onto a recordable CD-R or CD-RW disc.

**POINTS**

- Prior to using your Media Player, you must install the Media Player software. Refer to the applicable readme file on the Driver Applications CD-ROM for instructions on installing you Media Player software.
- You should periodically check the Fujitsu Web site at www.fujitsu.com for current updated drivers.

**CAUTION**

Prolonged use of the media player drive, such as watching a DVD movie, will substantially reduce your battery life.

**LOADING A DVD, CD, CD-R, OR CD-RW (“MEDIA”)**

To load a disc into your media player drive, follow these steps:

1. Push and release the eject button on the front of the media player drive to open the holder tray. The tray will come out of the LifeBook a short distance.
2. Gently pull the tray out until a media disc can easily be placed in the tray.
3. Place the media into the tray, label side up, with the hole in the center of the disc. Snap the disc onto the raised circle in the center of the tray.
4. Gently push the holder tray back in until you hear a click. (Figure 4-7)

**CAUTION**

There may be a protective sheet in the tray from when it was shipped; please make sure it is removed before operating the drive.

**POINT**

If you have disabled the Auto Insert Notification Function, you will have to start the drive from your desktop, since your LifeBook will not automatically recognize that media has been loaded.

**CAUTION**

Do not operate your media player drive unless your LifeBook is sitting on a flat surface. Using a drive when the system is not level may damage the drive or prevent proper operation.
REMOVING MEDIA
1. Push and release the eject button on the front of the media player drive. This will stop the drive and the holder tray will come out of the LifeBook a short distance.
2. Gently pull the tray out until the disc can easily be removed from the tray.
3. Carefully remove the media disc from the holder tray.
4. Gently push the holder tray back in until you hear a click.

USING THE MEDIA PLAYER SOFTWARE
Starting a DVD Movie (DVD Models only)
1. Insert the DVD movie into the media player drive of your LifeBook. If the CD AutoRun feature activates, skip Step 2.
2. From the Start menu, select Programs, then select InterVideo WINDVD and click InterVideo WINDVD or double-click on the InterVideo WINDVD icon on the desktop. This will launch the DVD movie.
3. Click OK to close the About DVD Player Performance dialog box and the movie will begin.

Opening the Media Player Control Panel
With most DVD-ROMs, you have the option of altering how the movie should play and what you wish to view. You can do this by using the Media Player control panel and the mouse.
1. Right-click on the movie screen to open a dropdown menu for options.
2. Select View, then Player for all the controls available. This will open the control panel into the bottom of the screen.

Using the Media Player Control Panel
The Media Player software allows you to watch the movie much like a VCR player. You have the option to pause, rewind, fast-forward and stop the movie at any point.
1. To Pause the movie, click the button.
2. To Rewind the movie, click the button to rewind to a specific portion of the movie, or the button to return to the opening screen.
3. To Fast-forward the movie, click the button to forward to a specific portion of the movie, or the button to jump to the ending credits.
4. To Stop the movie, click the button.

Exiting the Media Player
1. Click on the located in the upper right corner of the title bar. This will open a Media Player dialog box.
2. Click Yes to stop and exit the movie, or No to close the Media Player dialog box and return to the movie.

USING DOLBY HEADPHONE
The Dolby Headphone utility lets you enjoy multi-channel sound sources, such as movies, with realistic surround sound using your conventional stereo headphones.

Dolby Headphone is a signal processing system that enables your stereo headphones to realistically portray the sound of a five-speaker playback system.

POINTS
- Prior to using your Media Player, you must install the Media Player software. Refer to the applicable readme file on the Driver Applications CD-ROM for instructions on installing your Media Player software.
- For details on using your media player, go to the Start menu and select Programs, InterVideo DVD, then select either InterVideo DVD Help or InterVideo DVD Readme.

Points
- Media discs which do not have the Dolby Surround 5:1 symbol will not support Dolby Headphone.
- After making changes to the Dolby Headphone feature and clicking OK, wait at least ten seconds before making another change in order to allow the system to stabilize.
To use the Dolby Headphone feature, perform the following steps:

1. Double click the InterVideo WinDVD icon on your desktop.
2. On the toolbar that appears, click the Properties button (the fourth button from the left, with the image of a wrench).
3. On the Properties window, select the Dolby Headphone tab.
4. To enable Dolby Headphone, check the Enable Dolby Headphone box. To change the type of surround sound, select one of the radio buttons listed under Room Filter Setting.
5. Click OK. The Dolby Headphone feature will now be enabled until you disable it by unchecking Enable Dolby Headphone.

USING THE MEDIA PLAYER ON BATTERY POWER
Since media player drives consume a lot of power, your overall battery life will be shorter when operating the media player drive continuously (such as watching a DVD movie) than during standard operation. Many movies run-times are longer than your LifeBook can support on a single battery. If you are watching a DVD movie on battery power you may need to swap in an additional, charged battery or attach AC power during the movie to view it in its entirety.

CAUTION
Prolonged use of the media player drive, such as watching a DVD movie, will substantially reduce your LifeBook’s battery life.

Many movie run-times are longer than your system can support on a single battery. If you are watching a DVD movie on battery power you may need to swap in an additional, charged battery or attach AC power during the movie to view it in its entirety.

POINT
An additional fully-charged battery is highly recommended if you will be watching DVD movies on battery power. If you don’t have an additional battery, you may purchase one either on-line at FPCDirect.fujitsupc.com or call 1-877-FPCDirect (1-877-372-3473).

To Watch a Movie on Battery Power:
1. Have an additional full-charged battery or your AC adapter ready for use.
2. Start watching your DVD movie.

3. When the low battery warning occurs, immediately stop the movie and exit the media player.

CAUTION
If you do not stop the media player quickly and the LifeBook attempts to auto-suspend (critical battery low state) the LifeBook will shutdown improperly. If this occurs, you will need to perform a hard reset and follow the instruction, if any, presented to you before the system will reboot.

4. Manually place your LifeBook into suspend mode by depressing the Suspend button and replace the discharged battery with an additional full-charged battery. Or if you do not have an additional battery, you may attach AC power as soon as you see the low battery warning.
5. Resume your LifeBook by pressing the Suspend button again. This step is not required if you attached AC power without entering suspend mode.
6. Restart your media player, locate and skip to the chapter of the movie you were last watching.
7. Continue watching your DVD movie.

POINT
Some shorter DVD movies may not require you to swap batteries or attach AC power to complete them. However, it is best to be prepared since actual battery life while operating the media player drive cannot be guaranteed.

AUTO INSERT NOTIFICATION FUNCTION
The Auto Insert Notification function allows your LifeBook to automatically start a DVD/CD as soon as it is inserted in the media player drive and the tray is closed. Your LifeBook will begin playing an audio DVD/CD or will start an application if the DVD/CD includes an auto run file.

Disabling Auto Insert Notification Function
To disable the Auto Insert Notification function, follow these easy steps:
1. Save all data and close all open applications.
2. From the Start menu, select Settings, and then select Control Panel.
3. Double-click the System icon. This will open the System Properties dialog box.
4. Select the Device Manager tab to display the device lists for your LifeBook.
5. Click on the + to the left of the CD player drive icon. The treeview will expand to show the media player drive manufacturer’s name and model number.

6. Double-click on the media player drive manufacturer’s name and model number. This will open the media player drive manufacturer’s name and model number dialog box.

7. Select the Settings tab and then remove the check mark in the Auto Insert Notification box to turn it off.

8. Click OK.

9. Click Close in the System Properties dialog box, then click Yes in the System Settings Change pop-up window when it asks you to restart your machine and activate this change.

The Auto Insert Notification function can be re-activated by repeating this process and placing a check mark in the Auto Insert Notification box to turn it back on.
PC Cards

Your Fujitsu LifeBook supports Type II PC Cards, which can perform a variety of functions.

Some available PC Cards:
- Fax/data modem cards.
- Local area network (LAN) cards.
- IDE solid-state disk cards.
- SCSI cards.
- Other PC Cards that conform to PCMCIA 2.1 or CardBus standards.

For further information, refer to the instructions supplied with your PC Card.

INSTALLING PC CARDS
PC Cards are installed in the PC Card slot. To install a PC Card, follow these easy steps: (Figure 4-8)

1. See your PC Card manual for specific instructions on the installation of your card. Some PC Cards may require your LifeBook to be Off while installing them.
2. Make sure there is no PC Card currently in the slot. If there is, see Removing PC Cards.
3. Insert your PC Card into the slot, with the product label facing up.
4. Push the card into the slot firmly until it is seated in the opening. You will hear a click and the Eject button will pop away from your LifeBook.
5. Flip the Eject button towards the rear of your LifeBook to lock the PC Card.

REMOVING PC CARDS
To remove a PC Card, follow these easy steps:

1. See your PC Card manual for specific instructions on removing your card. Some PC Cards may require your LifeBook to be in Suspend Mode or Off while removing them.

WARNING
Installing or removing a PC Card during your LifeBook’s shutdown or bootup process may damage the card and/or your LifeBook.

WARNING
Do not insert a PC Card into a slot if there is water or any other substance on the card as you may permanently damage the card, your LifeBook, or both.

CAUTION

1. See your PC Card manual for specific instructions on removing your card. Some PC Cards may require your LifeBook to be in Suspend Mode or Off while removing them.

POINT
If the dialog box states that the device cannot be removed, you must save all of your open files, close any open applications and shutdown your LifeBook. Once your LifeBook has been shutdown, you must turn Off the power using the power switch.
2. Flip the Eject button towards the front of your LifeBook until it is fully extended, and then push it in until it is flush with the LifeBook. This will push the PC Card slightly out of the slot allowing you to remove the card.

**CAUTION**
If the PC Card has an external connector and cable, do not pull the cable when removing the card.

**SMARTCARD READER**
An embedded SmartCard Reader is provided on your LifeBook. SmartCards are the same size and shape as credit cards, but they contain an integrated microprocessor chip. The chip can hold a variety of different information, and provides the user with many possible options, such as allowing them to make secure purchases, pay for phone calls, store security information, and provide personal identification and information.

In order to use the embedded SmartCard Reader, you must purchase an optional SmartCard adapter for installation into an available Type II PC Card slot.
Memory Upgrade Module

Your Fujitsu LifeBook comes with 128MB or 256MB high speed Synchronous Dynamic RAM (SDRAM) factory installed. To increase your LifeBook’s memory capacity, you can replace the original memory module with a higher capacity module. The memory upgrade must be a dual-in-line (DIMM) SDRAM module, and it can be up to 256MB capacity.

CAUTION
Do not remove any screws from the memory upgrade module compartment, except the ones specifically shown in the directions for installing and removing the memory upgrade module.

INSTALLING A MEMORY UPGRADE MODULE
1. Turn off power to your LifeBook using the power switch, and remove any power adapter (AC or auto/airline).
2. Make sure that all the connector covers are closed.
3. Turn the LifeBook bottom side up, with the front panel toward you.
4. Remove the screws of the memory upgrade module compartment. (Figure 4-9)
5. Remove the cover.
6. Remove the memory upgrade module from the static guarded sleeve.
7. Align the memory upgrade module with the part side up. Align the connector edge of the memory upgrade module with the connector slot in the compartment. The connector will be pointing toward the rear of the LifeBook.
8. Insert the memory upgrade module at a 45° angle. Press the connector edge of the module firmly down and into the connector until it lodges under the retaining clip. You will hear a click when it is properly in place. (Figure 4-10)
9. Replace the cover.
10. Replace the screws.

POINTER
The memory upgrade module is not something you routinely remove from your LifeBook. Once it is installed, you can leave it in place unless you want to change system memory capacity.

TO REMOVE A MEMORY UPGRADE MODULE
1. Perform steps 1 through 5 of Installing a Memory Upgrade Module.
2. Pull the clips sideways away from each side of the memory upgrade module at the same time.
3. While holding the clips out, remove the module from the slot by lifting it up and pulling towards the rear of your LifeBook. (Figure 4-11)

CAUTION
The memory upgrade module can be severely damaged by electro-static discharge (ESD). Be sure you are properly grounded when handling and installing the module.
4. Store the memory upgrade module in a static guarded sleeve.
5. Replace the cover.
6. Replace the screws.

**POINT**
After installing your memory module, you must complete the Resetting the Save-to-Disk Parameters procedure in order for the Save-to-Disk mode to operate properly on your LifeBook. (See Hibernation (Save-to-Disk) Feature on page 35 for more information)

**CHECKING THE COMPUTER RECOGNITION OF NEW MEMORY CAPACITY**
Once you have changed the system memory capacity by either adding or removing a memory upgrade module, be sure to check that your LifeBook has recognized the change.

You can check the memory capacity by looking at the main menu of the BIOS setup:

1. Turn on the power to your LifeBook using the power switch.
2. Allow the system to start booting and press the [F2] key once the Fujitsu logo appears on the screen. This will open the main menu of the BIOS setup with the current settings displayed. (See BIOS Setup Utility on page 31 for more information)

The System Memory and the Extended Memory capacity, as detected by your LifeBook during the Power On Self Test (POST), are displayed at the bottom of the main menu screen. The chart below shows you the possible displays that can be shown on the main menu screen.

**POINT**
If the total memory displayed is incorrect, check that your memory upgrade module is properly installed. (If the module is properly installed and the capacity is still not correctly recognized, see Troubleshooting on page 59.

Port Replicator

Your Fujitsu LifeBook comes with a Port Replicator. The Port Replicator extends the functionality of your LifeBook by providing ports to connect PS/2 devices, a LAN (RJ-45) cable, a USB device, an external monitor, a parallel device, a serial device, and an external floppy disk drive. The Port Replicator connects to the rear panel of your LifeBook. (See Device Ports on page 53 for more information)

BACK PANEL COMPONENTS
The following is a brief description of your Port Replicator’s back panel components.

LAN (RJ-45) Jack
The LAN port allows you to connect a LAN (RJ-45) cable. Note that when your LifeBook is connected to the Port Replicator, the LAN port on the system is not accessible; the Port Replicator LAN port is the only one that should be used when it is attached to the system. (Figure 4-12)

PS/2 Keyboard Port
The PS/2 keyboard port allows you to connect an external PS/2 keyboard. (Figure 4-12)

PS/2 Mouse Port
The PS/2 mouse port allows you to connect an external PS/2 Mouse. (Figure 4-12)

USB Port
The USB port allows you to connect Universal Serial Bus devices. (Figure 4-12)

External Monitor Port
The external monitor port allows you to connect an external VGA or SVGA CRT monitor. (Figure 4-12)

Parallel Port
The parallel port allows you to connect parallel devices. (This is also sometimes referred to as an LPT port.) (Figure 4-12)

Serial Port
The serial port allows you to connect serial (RS-232C) devices. (This is also sometimes referred to as a COM port.) (Figure 4-12)

External Floppy Disk Drive Port
The external floppy disk drive port allows you to attach an optional external floppy disk drive. (Figure 4-12)

DC Power Jack
The DC power jack allows you to plug in the AC adapter or the optional Auto/Airline adapter to power your LifeBook. (Figure 4-12)
FRONT PANEL COMPONENTS
The following is a brief description of your Port Replicator's front panel components.

Docking Port
The docking port connects the Port Replicator to your LifeBook. (Figure 4-13)

Port Replicator Release Latch
Slide the Port Replicator Release button to remove the Port Replicator from your LifeBook. (Figure 4-13)

ATTACHING THE PORT REPLICATOR
The Port Replicator can be attached on your LifeBook while the power is on, while in suspend mode, or while the power is off. To attach the Port Replicator follow these easy steps:

1. Align the Port Replicator connector on the lower surface of your LifeBook with the connector on top of the Port Replicator.
2. Push your LifeBook down to connect it to the Port Replicator securely. (Figure 4-14)

DETACHING THE PORT REPLICATOR
The Port Replicator can be detached from your LifeBook while the power is on, while in suspend mode, or while the power is off. To detach the Port Replicator follow these easy steps:

1. Slide the Port Replicator’s release button to the right to release the lock. (Figure 4-15)
2. Lift up your LifeBook to detach it from the Port Replicator.
Device Ports
Your Fujitsu LifeBook and Port Replicator come equipped with multiple ports to which you can connect external devices including: disk drives, keyboards, modems, printers, etc.

**MODEM (RJ-11) TELEPHONE JACK**
The modem (RJ-11) telephone jack is used for an internal modem. To connect the telephone cable follow these easy steps: (See figure 2-7 on page 9 for location)

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.
3. Plug the other end of the telephone cable into a telephone outlet.

The modem sound is deactivated by default, to activate modem sound follow these easy steps:

1. Right click on the Speaker icon in your system tray.
2. Select **Open Volume**.
3. Select **Option/Properties**.
4. Under "Show the following volume controls", click on **Phone** and click **OK**.
5. Uncheck the Mute box under Phone Balance.

**WARNING**
The internal modem is not intended for use with Digital PBX systems. Do not connect the internal modem to a Digital PBX as it may cause serious damage to the internal modem or your entire LifeBook. Consult your PBX manufacturer’s documentation for details. Some hotels have Digital PBX systems. Be sure to find out BEFORE you connect your modem.

**CAUTION**
The internal modem is designed to the ITU-T V.90 standard. Its maximum speed of 53000bps is the highest allowed by FCC, and its actual connection rate depends on the line conditions. The maximum speed is 33600bps at upload.

**CAUTION**
The internal modem on all Fujitsu LifeBooks from Fujitsu PC Corporation are certified for use in the United States and Canada. The modem may be certified in other countries.

**INTERNAL LAN (RJ-45) JACK**
The internal LAN (RJ-45) jack is used for an internal Fast Ethernet (10/100 Base-T/Tx) connection. If your LifeBook has been configured with internal LAN capability you will need to configure your LifeBook to work with your particular network. (Please refer to your network administrator for information on your network configuration.) To connect the LAN cable follow these easy steps: (See figure 2-8 on page 10 for location)

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.
3. Plug the other end of the cable into a LAN outlet.

**PARALLEL PORT**
The parallel port, or LPT port, located on the Port Replicator allows you to connect parallel devices, such as a printer to your LifeBook. In order to connect a parallel interface device follow these easy steps: (See figure 4-12 on page 51 for location)

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.
3. Tighten the two hold-down screws, located on each end of the connector.

**SERIAL PORT**
The serial port, or COMM port, located on the Port Replicator allows you to connect serial devices, such as printers or scanners. In order to connect a serial interface device follow these easy steps: (See figure 4-12 on page 51 for location)

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.
3. Tighten the two hold-down screws, located on each end of the connector.

**PS/2 PORTS**
The PS/2 ports located on the Port Replicator allow you to connect an external keyboard, and/or numeric keypad and mouse. In order to connect a PS/2 interface device follow these easy steps: (See figure 4-12 on page 51 for location)

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

**DOCKING PORT**
The docking port is used for the connection of your LifeBook to an optional port replicator or docking station. In order to connect your LifeBook to one of these devices follow the instructions that came with your docking port. (See figure 2-9 on page 11 for location)
EXTERNAL FLOPPY DISK DRIVE PORT
The external floppy disk drive port is used for attaching an optional external floppy disk drive or an optional modular floppy disk drive with the optional floppy cable. In order to connect an external floppy disk drive to your LifeBook follow the instructions that came with your external floppy disk drive. (See figure 4-12 on page 51 for location)

UNIVERSAL SERIAL BUS PORT
The Universal Serial Bus port (USB) allows you to connect USB devices such as external game pads, pointing devices, keyboards and/or speakers. In order to connect a USB device follow these easy steps: (See figure 4-12 on page 51 for location)
1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

STEREO LINE-IN JACK
The stereo line-in jack allows you to connect an external audio source to your LifeBook, such as an audio cassette player. Your audio device must be equipped with a 1/8" (3.5 mm) stereo mini-plug in order to fit into the stereo line-in jack of your LifeBook. In order to connect a external audio source follow these easy steps: (See figure 2-7 on page 9 for location)
1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

HEADPHONE JACK
The headphone jack allows you to connect headphones or powered external speakers to your LifeBook. Your headphones or speakers must be equipped with a 1/8" (3.5 mm) stereo mini-plug. In order to connect headphones or speakers follow these easy steps: (See figure 2-7 on page 9 for location)
1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

INFRARED PORT
The Infrared IrDA 1.1 (4Mbps) port allows for wireless data transfer between your LifeBook and other IrDA-compatible devices, such as another computer or a printer, without the use of a cable. (See figure 2-8 on page 10 for location)

It is important to keep in mind that while carrying out this form of communication, both devices must be placed so their infrared ports are directly facing each other without obstruction. The devices must also be separated by at least 6” but no more than 36” for maximum performance.

The following conditions may interfere with infrared communications:
- A television, radio remote control unit, or a wireless headphone is being used nearby.
- Direct sunlight, fluorescent light, or incandescent light shines directly on the port.

CAUTION
Do not move either device while communication is active as it may interrupt data transmission.

CAUTION
Be careful not to scratch the infrared port lens. Dirt, scratches, or other surface marks can degrade operation.

CAUTION
Turn down the audio volume when connecting electronic devices to the line-in jack. The internal speakers might break if unexpected large sounds are inputted.

HEADPHONE JACK
If you plug headphones into the headphone jack, the built-in stereo speakers will be disabled.
MICROPHONE JACK
The microphone jack allows you to connect an external mono microphone. Your microphone must be equipped with a 1/8” (3.5 mm) mono mini-plug in order to fit into the microphone jack of your LifeBook. In order to connect a microphone follow these easy steps: (See figure on page 9 for location)

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.

EXTERNAL MONITOR PORT
The external monitor port allows you to connect an external monitor. In order to connect an external monitor follow these easy steps: (See figure 2-8 on page 10 for location)

1. Align the connector with the port opening.
2. Push the connector into the port until it is seated.
3. Tighten the two hold-down screws, located on each end of the connector.

CAUTION
Pressing the [FN] + [F10] keys allows you to change your selection of where to send your display video. Each time you press the key combination, you will step to the next choice, starting with the built-in display panel only, moving to the external monitor only, finally moving to both the built-in display panel and an external monitor.
Troubleshooting
Troubleshooting

Your Fujitsu LifeBook is sturdy and subject to few problems in the field. However, you may encounter simple setup or operating problems that you can solve on the spot, or problems with peripheral devices, that you can solve by replacing the device. The information in this section helps you isolate and resolve some of these straightforward problems and identify failures that require service.

IDENTIFYING THE PROBLEM

If you encounter a problem, go through the following procedure before pursuing complex troubleshooting:

1. Turn off your LifeBook.
2. Make sure the AC adapter is plugged into your LifeBook and to an active AC power source.
3. Make sure that any card installed in the PC Card slot is seated properly. You can also remove the card from the slot, thus eliminating it as a possible cause of failure.
4. Make sure that any devices connected to the external connectors are plugged in properly. You can also disconnect such devices, thus eliminating them as possible causes of failure.
5. Turn on your LifeBook. Make sure it has been off at least 10 seconds before you turn it back on.
6. Go through the boot sequence.
7. If the problem has not been resolved, refer to the Troubleshooting Table, that follows, for more detailed troubleshooting information.

8. If you have tried the solutions suggested in the Troubleshooting Table without success, contact your support representative:
   Toll free: 1-800-8FUJITSU (1-800-838-5487)
   Fax: 1-901-259-5700
   E-mail: 8fujitsu@fujitsupc.com

Before you place the call, you should have the following information ready so that the customer support representative can provide you with the fastest possible solution:

- Product name
- Product configuration number
- Product serial number
- Purchase date
- Conditions under which the problem occurred
- Any error messages that have occurred
- Hardware configuration
- Type of device connected, if any

See the Configuration Label on the bottom of your LifeBook for configuration and serial numbers. (See figure 2-9 on page 11 for location)

SPECIFIC PROBLEMS

Using PC-Doctor

PC-Doctor is a diagnostic program by PC-Doctor.com, Inc. which comes pre-installed on your LifeBook. If you are an experienced computer user you may find it useful, however, it is intended primarily to help your Fujitsu support representative better serve you.

Using the Troubleshooting Table

When you have problems with your LifeBook, try to find the symptoms under the Problem column of the troubleshooting table for the feature giving you difficulty. You will find a description of common causes for that symptom under the column Possible Cause and what, if anything, you can do to correct the condition under Possible Solutions. All possible causes or solutions may not apply to your LifeBook.

POINT

If you keep notes about what you have tried, your support representative may be able to help you more quickly by giving additional suggestions over the phone.

CAUTION

Do not return a failed LifeBook to your supplier until you have talked to a support representative.

<th>Possible Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>An error message is displayed on the screen during the operation of an application.</td>
<td>Application software often has its own set of error message displays.</td>
<td>See your application manual and help displays screens for more information. Not all messages are errors some may simply be status.</td>
</tr>
</tbody>
</table>
POWER ON SELF TEST MESSAGES
The following is an alphabetic list of error-and-status messages that Phoenix BIOS and/or your operating system can generate and an explanation of each message. Error messages are marked with an *.

*nnnn Cache SRAM Passed
Where nnnn is the amount of system cache in kilobytes successfully tested by the Power On Self Test. (This can only appear if you have an SRAM PC Card installed.)

*Diskette drive A error or Diskette drive B error
Drive A: or B: is present but fails the BIOS Power On Self Test diskette tests. Check to see that the drive is defined with the proper diskette type in the Setup Utility. (*See BIOS Setup Utility on page 31 for more information) and that the diskette drive is installed correctly. If the disk drive is properly defined and installed, avoid using it and contact your support representative.

*Extended RAM Failed at offset: nnnn
Extended memory not working or not configured properly. If you have an installed memory upgrade module, verify that the module is properly installed. If it is properly installed, you may want to check your Windows Setup to be sure it is not using unavailable memory until you can contact your support representative.

nnnn Extended RAM Passed
Where nnnn is the amount of memory in kilobytes successfully tested.

*Failing Bits: nnnn The hex number nnnn
This is a map of the bits at the memory address (in System, Extended, or Shadow memory) which failed the memory test. Each 1 (one) in the map indicates a failed bit. This is a serious fault that may cause you to lose data if you continue. Contact your support representative.

*Fixed Disk x Failure or Fixed Disk Controller Failure (where \( x = 1-4 \))
The fixed disk is not working or not configured properly. This may mean that the hard drive type identified in your setup utility does not agree with the type detected by the Power On Self Test. Run the setup utility to check for the hard drive type settings and correct them if necessary. If the settings are OK and the message appears when you restart the system, there may be a serious fault which might cause you to lose data if you continue. Contact your support representative.

*Incorrect Drive A type – run SETUP
Type of floppy drive A: not correctly identified in Setup. This means that the floppy disk drive type identified in your setup utility does not agree with the type detected by the Power On Self Test. Run the setup utility to correct the inconsistency.

*Incorrect Drive B type – run SETUP
Type of floppy drive B: not correctly identified in Setup. This means that the floppy disk drive type identified in your setup utility does not agree with the type detected by the Power On Self Test. Run the setup utility to correct the inconsistency.

*Invalid NVRAM media type
Problem with NVRAM access. In the unlikely case that you see this message you may have some display problems. You can continue operating but should contact your support representative for more information.

*Keyboard controller error
The keyboard controller test failed. You may have to replace your keyboard or keyboard controller but may be able to use an external keyboard until then. Contact your support representative.

*Keyboard error
Keyboard not working. You may have to replace your keyboard or keyboard controller but may be able to use an external keyboard until then. Contact your support representative.

*Monitor type does not match CMOS – Run SETUP
Monitor type not correctly identified in Setup. This error probably means your BIOS is corrupted, run the setup utility and set all settings to the default conditions. If you still get this error, contact your support representative.

*Operating system not found
Operating system cannot be located on either drive A: or drive C: Enter the setup utility and see if both the fixed disk, and drive A: are properly identified and that the boot sequence is set correctly. Unless you have changed your installation greatly, the operating system should be on drive C:. If the setup utility is correctly set, your hard drive may be corrupted and your system may have to be re-installed from your back up media.

*Parity Check 1 nnnn
Parity error found in the system bus. BIOS attempts to locate the address and display it on the screen. If it cannot locate the address, it displays ???. This is a potentially data destroying failure. Contact your support representative.
LifeBook S Series – Section Five

*Parity Check 2 nnnn
Parity error found in the I/O bus. BIOS attempts to locate the address and display it on the screen. If it cannot locate the address, it displays ???. This is a potentially data-destroying failure. Contact your support representative.

*Press <F1> to resume, <F2> to SETUP
Displayed after any recoverable error message. Press the [F1] key to continue the boot process or the [F2] key to enter Setup and change any settings.

*Previous boot incomplete – Default configuration used
Previous Power On Self Test did not complete successfully. The Power On Self Test will load default values and offer to run Setup. If the previous failure was caused by incorrect values and they are not corrected, the next boot will likely fail also. If using the default settings does not allow you to complete a successful boot sequence, you should turn off the power with the Power Switch and contact your support representative.

*Real time clock error
Real-time clock fails BIOS test. May require board repair. Contact your support representative.

*Shadow RAM Failed at offset: nnnn
Shadow RAM failed at offset nnnn of the 64k block at which the error was detected. You are risking data corruption if you continue. Contact your support representative.

nnnn Shadow RAM Passed
Where nnnn is the amount of shadow RAM in kilobytes successfully tested.

*System battery is dead – Replace and run SETUP
The BIOS CMOS RAM memory hold up battery is dead. This is part of your BIOS and is a board mounted battery which requires a support representative to change. You can continue operating but you will have to use setup utility default values or reconfigure your setup utility every time you turn off your LifeBook. This battery has an expected life of 2 to 3 years.

System BIOS shadowed
System BIOS copied to shadow RAM.

*System CMOS checksum bad – run SETUP
BIOS CMOS RAM has been corrupted or modified incorrectly, perhaps by an application program that changes data stored in BIOS memory. Run Setup and reconfigure the system.

*System RAM Failed at offset: nnnn
System memory failed at offset nnnn of in the 64k block at which the error was detected. This means that there is a fault in your built-in memory. If you continue to operate, you risk corrupting your data. Contact your support representative for repairs.

nnnn System RAM Passed
Where nnnn is the amount of system memory in kilobytes successfully tested.

*System timer error
The timer test failed. The main clock that operates the computer is faulty. Requires repair of system board. Contact your support representative for repairs.

UMB upper limit segment address: nnnn
Displays the address of the upper limit of Upper Memory Blocks, indicating released segments of the BIOS memory which may be reclaimed by a virtual memory manager.

Video BIOS shadowed
Video BIOS successfully copied to shadow RAM.

MODEM RESULT CODES
The operating system and application software that is factory installed detects the modem characteristics and provides the necessary command strings to operate the modem. The internal modem operation is controlled by generic AT commands from the operating system and application software. The standard long form result codes may, in some cases, be displayed on your screen to keep you informed of the actions of your modem. The operating system and application software may suppress display of the result codes.

Examples of result codes are:
- OK
- NO CARRIER
- NO DIALTONE
- CONNECT 53000 (Connection complete at 53,000 bps.)
- ERROR
- FAX
- RING (This means an incoming call.)
- BUSY
- NO ANSWER

When using the internal modem with applications that are not factory installed refer to the application documentation.
Troubleshooting

Restoring Your Pre-installed Software

Your system has been loaded with a valuable utility that allows you to restore your LifeBook disk drive contents as they were originally shipped from the factory. Most often this is necessary if files or software programs (only those files/programs that came pre-installed) become corrupt or accidentally erased.

DRIVE IMAGE SPECIAL EDITION (DISE)

PowerQuest Drive Image Special Edition (DISE) provides a way to restore your computer if you experience a hard disk crash or other system failure. Fujitsu has used DISE to create an image of everything that was installed on the computer at the time you purchased it. The image is saved on a separate partition on the hard disk. You can use DISE to restore the factory image and return your computer to the state in which it shipped from Fujitsu.

Although it is not necessary, you can use DISE to store an additional image file that you create. For example, if you install several applications and save data files on your hard disk, you can create a new image file that includes them and then save that image file on the hard disk. Then, in the event of a hard disk failure, you can restore the image that includes the applications and data files you use.

Fujitsu recommends that you create a DISE disk as a “rescue disk.” If your computer fails, you can boot and run DISE from the rescue disk.

Creating Drive Image SE Diskettes

Note: You can use a DISE disk to boot your machine and run DISE if your machine is unbootable or if you do not have access to Windows.

Insert a formatted floppy disk in your machine.

From the Drive Image Special Edition main window, click Options > Create Drive Image SE Diskette.

Running DISE from Diskettes

1. Insert the Drive Image SE Disk 1 in the floppy drive.
2. Reboot your computer.
3. Insert Disk 2, type DISE, then press <Enter>.

Creating a Backup Image

You can create a backup image of your C: \ partition at any time. The C: \ partition must be a FAT, FAT32, or NTFS partition, and it must be directly before the backup partition on your hard disk.

1. At the Drive Image Special Edition main screen, click Options > Create New Backup.
   There is also a button on the main DISE screen that performs the same function.
2. You will be prompted to type a password. Type a password (or leave the password fields blank), then click OK. DISE displays a warning that it must go to DOS to create the image.
3. Click Yes.
   DISE creates an image file in the backup partition. If you created a backup image previously, the new image overwrites the old one.

Enlarging the Backup Partition

If there is not enough unused space in the backup partition on your hard disk, DISE will resize the partition. DISE will display the minimum, maximum, and recommended sizes for the backup partition. You choose the size you want.

DISE takes the space from the FAT, FAT32, or NTFS partition that you are backing up. If there is not enough unused space in that partition to take, you will not be able to resize the backup partition and create an image file. You can delete files from the FAT, FAT32, or NTFS partition to create more unused space on the hard disk.

Restoring a Backup Image

You can restore either a factory image or a backup image you created. Be aware that restoring a backup image will replace the contents of the C: \ partition with the image you restore.

1. Disable virus protection software in the BIOS. If virus protection software is enabled, DISE will hang.
2. From the DISE main window, click Options > Restore Backup to restore an image you created, or click Options > Restore Factory Backup to restore the factory image.
   DISE shuts down to DOS and restores the image file.

Drivers and Applications Restore CD

The Drivers and Application CD can be used to selectively re-install drivers and/or applications that may have been un-installed or corrupted. Please refer to installation instructions located in the Drivers and Applications Restore CD.

POINT

Using the DISE feature will reduce the amount of usable disk space on your hard disk drive.

POINT

Look for and open files with the extensions .DOC, .PDF and/or .TXT.
Care and Maintenance
Care and Maintenance

If you use your Fujitsu LifeBook carefully, you will increase its life and reliability. This section provides some tips for looking after the LifeBook and its devices.

CAUTION

Electrical equipment may be hazardous if misused. Operations of this product or similar products, must always be supervised by an adult. Do not allow children access to the interior of any electrical products and do not permit them to handle any cables.

FUJITSU LIFEBOOK

Caring for your Fujitsu LifeBook

- Your Fujitsu LifeBook is a durable but sensitive electronic device. Treat it with respect and care.
- Make a habit of transporting it in a suitable carrying case.
- Do not attempt to service the computer yourself. Always follow installation instructions closely.
- Keep it away from food and beverages.
- If you accidentally spill liquid on your LifeBook:
  1. Turn it off.
  2. Position it so that the liquid can run out.
  3. Let it dry out for 24 hours, or longer if needed.
  4. If your LifeBook will not boot after it has dried out, call your support representative.
- Do not use your Fujitsu LifeBook in a wet environment (near a bathtub, swimming pool).
- Always use the AC adapter and batteries that are approved for your LifeBook.
- Avoid exposure to sand, dust and other environmental hazards.
- Do not expose your Fujitsu LifeBook to direct sunlight for long periods of time as temperatures above 140°F (60°C) may damage your LifeBook.
- Keep the covers closed on the connectors and slots when they are not in use.
- Do not put heavy or sharp objects on the computer.
- If you are carrying your Fujitsu LifeBook in a briefcase, or any other carrying case, make sure that there are no objects in the case pressing on the lid.
- Never position your LifeBook such that the media player drive is supporting the weight of the LifeBook.
- Do not drop your Fujitsu LifeBook.
- Do not touch the screen with any sharp objects.

Cleaning your Fujitsu LifeBook

- Always disconnect the power plug. (Pull the plug, not the cord.)
- Clean your Fujitsu LifeBook with a damp, lint-free cloth. Do not use abrasives or solvents.
- Use a soft cloth to remove dust from the screen. Never use glass cleaners.

Storing your Fujitsu LifeBook

- If storing your LifeBook for a month or longer, turn your Fujitsu LifeBook off and remove all Lithium ion batteries.
- Store your Fujitsu LifeBook and batteries separately. If you store your LifeBook with a battery installed, the battery will discharge, and battery life will be reduced. In addition, a faulty battery might damage your LifeBook.
- Store your Fujitsu LifeBook in a cool, dry location. Temperatures should remain between -25°C (13°F) and 60°C (140°F).

Traveling with your Fujitsu LifeBook

- Do not transport your Fujitsu LifeBook while it is turned on.
- Do not check your Fujitsu LifeBook as baggage. Carry it with you.
- Always bring your System Recovery CD that came with your Fujitsu LifeBook when you travel. If you experience system software problems while traveling, you may need it to correct any problems.
- Never put your Fujitsu LifeBook through a metal detector. Have your LifeBook hand-inspected by security personnel. You can however, put your Fujitsu LifeBook through a properly tuned X-ray machine. To avoid problems, place your LifeBook close to the entrance of the machine and remove it as soon as possible or have your LifeBook hand-inspected by security personnel. Security officials may require you to turn your LifeBook On. Make sure you have a charged battery on hand.
- When traveling with the hard drive removed, wrap the drive in a non-conducting materials (cloth or paper). If you have the drive checked by hand, be ready to install the drive if needed. Never put your hard drive through a metal detector. Have your hard drive hand-inspected by security personnel. You can however, put your hard drive through a properly tuned X-ray machine.
- Take the necessary plug adapters if you’re traveling overseas. Check the following diagram to determine which plug adapter you’ll need or ask your travel agent.
BATTERIES
Caring for your Batteries
- Always handle batteries carefully.
- Do not short-circuit the battery terminals (that is, do not touch both terminals with a metal object). Do not carry lose batteries in a pocket or purse where they may mix with coins, keys, or other metal objects. Doing so may cause an explosion or fire.
- Do not drop, puncture, disassemble, mutilate or incinerate the battery.
- Recharge batteries only as described in this manual and only in ventilated areas.
- Do not leave batteries in hot locations for more than a day or two. Intense heat can shorten battery life.
- Do not leave a battery in storage for longer than 6 months without recharging it.

Increasing Battery Life
- Power your Fujitsu LifeBook through the AC or optional auto/airline adapter whenever possible.
- If your Fujitsu LifeBook is running on battery power all day, connect it to the AC adapter overnight to recharge the battery.
- Keep brightness to the lowest level comfortable.
- Set the power management for maximum battery life.
- Put your Fujitsu LifeBook in Suspend mode when it is turned on and you are not actually using it.
- Limit your media drive access.
- Disable the Media Player auto insert notification function.
- Always use fully charged batteries.
- Eject PCMCIA™ cards when not in use.

FLOPPY DISKS AND DRIVES
Caring for your Floppy Disks
- Avoid using the floppy disks in damp and dusty locations.
- Never store a floppy disk near a magnet or magnetic field.
- Do not use a pencil or an eraser on a disk or disk label.
- Avoid storing the floppy disks in extremely hot or cold locations, or in locations subject to severe temperature changes. Store at temperatures between 50º F (10ºC) and 125ºF (52ºC).
- Do not touch the exposed part of the disk behind the metal shutter.

Caring for your Floppy Disk Drive
- To clean, wipe the floppy disk drive clean with a dry soft cloth, or with a soft cloth dampened with water or a solution of neutral detergent. Never use benzene, paint thinner or other volatile material.
- Avoid storing the floppy disk drive in extremely hot or cold locations, or in locations subject to severe temperature changes. Store at temperatures between 50º F (10ºC) and 125ºF (52ºC).
- Keep the floppy disk drive out of direct sunlight and away from heating equipment.
- Avoid storing the floppy disk drive in locations subject to shock and vibration.
- Never use the floppy disk drive with any liquid, metal, or other foreign matter inside the floppy disk drive or disk.
- Never disassemble or dismantle your floppy disk drive.
MEDIA CARE
Caring for your Media (DVD/CD/CD-R)
Media discs are precision devices and will function reliably if given reasonable care.

- Always store your media disc in its case when it is not in use.
- Always handle discs by the edges and avoid touching the surface.
- Avoid storing any media discs in extreme temperatures.
- Do not bend media discs or set heavy objects on them.
- Do not spill liquids on media discs.
- Do not scratch media discs.
- Do not put a label on media discs.
- Do not get dust on media discs.
- Never write on the label surface with a ballpoint pen or pencil. Always use a felt pen.
- If a media disc is subjected to a sudden change in temperature, cold to warm condensation may form on the surface. Wipe the moisture off with a clean, soft, lint free cloth and let it dry at room temperature. DO NOT use a hair dryer or heater to dry media discs.
- If a disc is dirty, use only a DVD/CD cleaner or wipe it with a clean, soft, lint free cloth starting from the inner edge and wiping to the outer edge.

Caring for your Media Player Drive
Your media player drive is durable but you must treat it with care. Please pay attention to the following points:

- The drive rotates the compact disc at a very high speed. Do not carry it around or subject it to shock or vibration with the power on.
- Avoid using or storing the drive where it will be exposed to extreme temperatures.
- Avoid using or storing the drive where it is damp or dusty.
- Avoid using or storing the drive near magnets or devices that generate strong magnetic fields.
- Avoid using or storing the drive where it will be subjected to shock or vibration.
- Do not disassemble or dismantle the media player drive.

PC CARDS
Caring for your PC Cards
PC Cards are durable, but you must treat them with care. The documentation supplied with your PC Card will provide specific information, but you should pay attention to the following points:

- To keep out dust and dirt, store PC Cards in their protective sleeves when they are not installed in your LifeBook.
- Avoid prolonged exposure to direct sunlight or excessive heat.
- Keep the cards dry.
- Do not flex or bend the cards, and do not place heavy objects on top of them.
- Do not force cards into the slot.
- Avoid dropping cards, or subjecting them to excessive vibration.
7

Specifications
Specifications

This section provides the hardware and environmental specifications for your Fujitsu LifeBook. Specifications of particular configurations will vary.

CONFIGURATION LABEL

There is a configuration label located on the bottom of your Fujitsu LifeBook. (See figure 2-9 on page 11 for location) This label contains specific information regarding the options you’ve chosen for your LifeBook. Following is an example label and information on how to read your own configuration label.

![Configuration Label Diagram]

Part Number: FPC04045AS
Model #: S-4546, PIII 600, 12T, 128, 98, 10G, DVD

MICROPROCESSOR
600Mz Intel low-voltage Pentium III mobile processor with SpeedStep technology.

MEMORY
System Memory
128MB or 256MB SDRAM (one slot, no expansion slot)
Cache Memory
256K on-die L2
BIOS Memory
512KB Flash ROM
256 Bytes CMOS RAM with back-up battery

VIDEO
Built-in color flat-panel TFT active matrix LCD display with simultaneous display capability
Video Color and Resolution
12.1” TFT XGA
- Internal: 1024 x 768 pixel resolution, 256K colors
- External: 1600 x 1200 pixel resolution, 64K colors
- Simultaneous Video = Yes (1024 x 768, 256K colors)
- XGA, SVGA and VGA compatible
- DVD Playback: 1024 x 768 pixel resolution, 256K colors

Video RAM
ATI Rage Mobility-M with 4MB embedded SDRAM

AUDIO
- Sound Blaster Pro-compatible 32-bit stereo PCM/FM sound chip
- Spatializer 3D-Stereo multiple speaker effect support
- Stereo headphone jack, 1 Vrms, or less, minimum impedance 32 Ohms
- Stereo line in jack, 880 mVrms or less, minimum impedance 10K Ohms
- Mono microphone jack, 125 mVp-p or less, minimum impedance 10K Ohms
- Two built-in speakers, 28 mm diameter (Stereo)
- One built-in monaural microphone

MASS STORAGE DEVICE OPTIONS
Single Flexible Bay devices:

- USB Floppy Disk Drive
  External 3.5” Floppy Disk Drive, which accommodates 1.44MB or 720KB floppy disks

- Hard Drive
  20GB or 10GB fixed hard drive

- DVD Drive
  Modular 8x maximum DVD drive
  or

- CD-RW Drive
  Modular 4x maximum CDR
  Modular 4x maximum CD-RW
  Modular 24x maximum CD
SuperDisk Drive
Modular SuperDisk 120 Drive for 120MB SuperDisks

FEATURES
Integrated Pointing Device
Touchpad pointing device with scroll button

Communications
Modem: Internal V.90 standard 56K fax/modem (ITU V.90, 56K data, 14.4K fax)
LAN: 10/100 Base-TX Ethernet

LifeBook Security/Application Panel
The Application Launcher buttons on your LifeBook default to the following applications:

<table>
<thead>
<tr>
<th>Button</th>
<th>Label</th>
<th>Function Default Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Application A</td>
<td>Microsoft Works</td>
</tr>
<tr>
<td>2</td>
<td>Application B</td>
<td>Calculator</td>
</tr>
<tr>
<td>3</td>
<td>Internet</td>
<td>Internet Explorer</td>
</tr>
<tr>
<td>4</td>
<td>E-Mail</td>
<td>Netscape Messenger</td>
</tr>
</tbody>
</table>

Theft Prevention Lock
Lock slot for use with physical restraining security systems. The locking system by Kensington is recommended.

DEVICE PORTS
On the LifeBook:
- PC Card slot for one Type II card: PCMCIA Standard 2.1 with CardBus support
- One 15-pin D-SUB connector for VGA external monitor (see Display specifications)
- Two USB (Universal Serial Bus) connectors for input/output devices
- One modular modem (RJ-11) connector
- One LAN (RJ-45) connector
- One stereo headphone jack. (See Audio specifications)
- One mono microphone jack. (See Audio specifications)
- One ECP connector for serial port devices
- Embedded SmartCard Reader (requires third-party application)

On the Port Replicator:
- Two 6-pin mini DIN PS/2 compatible connectors for external keyboard, external mouse or external numeric keypad
- One 25-pin D-SUB connector for parallel input/output devices; Bi-directional, output only or ECP
- One 15-pin D-SUB connector for VGA external monitor (see Display specifications)
- One 9-pin D-SUB connector for RS-232C serial input/output devices
- One USB (Universal Serial Bus) connector for input/output devices
- One 25-pin special connector for external floppy disk drive connection
- One LAN (RJ-45) connector

KEYBOARD
Built-in keyboard with all functions of 101 key PS/2 compatible keyboards.
- Total number of keys: 82
- Function keys: F1 through F12
- Feature extension key: Fn
- Two Windows keys: one Start keys and one application key
- Key pitch: 19 mm
- Key stroke: 3 mm
- Built-in Touchpad pointing device with left and right buttons and scroll button.
- Built-in Palm Rest

External Keyboard Support
PS/2-compatible

External Numeric Keypad Support
PS/2-compatible

External Mouse Support
PS/2-compatible

POWER
Batteries
One 6-cell Lithium ion battery, rechargeable, 10.8V, 2600 mAh

Bridge Battery
Your LifeBook comes equipped with a bridge battery. A bridge battery allows a charged Lithium ion battery to be replaced without shutting down the system. The bridge battery capacity is not large and can vary with the condition of your LifeBook, so you will have 3 minutes at the most to make the change.

AC Adapter
Autosensing 100-240V AC, 40W, supplying 16V DC to the LifeBook, Fujitsu Model FPCAC14 which includes an AC cable.

Power Management
Conforms to ACPI (Advanced Configuration and Power Interface).

DIMENSIONS AND WEIGHT
Overall Dimensions
Approximately 11.3"(w) x 8.9"(d) x 0.93"/1.3"(h)
Weights
Approximately 3.8 lbs with battery and weight saver.
Approximately 4.5 lbs with battery and DVD drive.
Port Replicator approximately 0.8 lbs.

ENVIRONMENTAL REQUIREMENTS
Temperature
Operating: 5° to 35° C (41° to 95° F)
Non-operating: –15° to 60° C (5° to 140° F)

Humidity
Operating: 20% to 85%, relative, non-condensing
Non-operating: 8% to 85%, relative, non-condensing

Altitude
Operating: 10,000 feet (3,048 m) maximum

POPULAR ACCESSORIES
For ordering or additional information on Fujitsu accessories please visit our Web site at www.fujitsupc.com or call 1-800-733-0884.

Memory Upgrades
- 256MB SDRAM
Original pre-installed memory must be removed prior to installing new memory module.

Docking
- Port Replicator

Expansions
- Universal LAN Hub
- External floppy drive
- External USB floppy drive

Power
- Main Lithium ion battery
- Battery Charger
- Auto/Airline Adapter
- AC Adapter

Flexible Bay Devices
- Modular SuperDisk 120 drive
- Modular CD-RW drive
- Modular 8x DVD drive
- Modular CD-ROM drive
- Modular PC Card slot 1 x Type I/II
- Modular 2nd Lithium ion Battery
- Modular Digital Camera

PC Cards
- Xircom Global Access Modem56

Additional Accessories
- Mini Serial-to-RS232 Cable
MCAFEE.COM ACTIVESHIELD
ActiveShield, by McAfee.com, is an antivirus program that can be run after loading data or programs onto your LifeBook. It assists in the protection of the data currently residing on your hard disk from contamination and destruction. (See your ActiveShield online help or manual for more information on how and when to run this program)

LIFEBOOK SECURITY/APPLICATION PANEL SOFTWARE
Your LifeBook is pre-installed with software utilities that let you operate and configure your LifeBook Security/Application Panel.

The Security Panel portion allows for password protection while the system is off or in Suspend mode. The Security Panel utilities are found under the Start menu, under Programs, then under LifeBook Security Panel.

The Application Panel utilities are found under the Start menu, under Programs, then under LifeBook Application Panel. The utilities include a CD Player, Application Panel Setup, Application Panel Guide, Activate Panel and Deactivate Panel.

BATTERYAID
BatteryAid allows you to control the display brightness of your LifeBook in order to maximize battery life. (See your BatteryAid online help for more information on the correct way to use this program)

ADOBE ACROBAT READER
The Adobe Acrobat Reader, located in the Service and Support Software folder, allows you to view, navigate, and print PDF files from across all of the major computing platforms.

SOFTEX BAYMANAGER (WINDOWS 98 ONLY)
BayManager provides a simple and powerful method of switching drives of a LifeBook computer without having to reboot the LifeBook computer. Windows 98 Second Edition does not natively support hot swapping. With BayManager, you can swap bay devices while your OS is running, this is called hot-swapping.

BayManager Features
- Allows hot-swapping of devices on LifeBook. You do not need to shut down the system to exchange devices.
- Works under ACPI and APM.
- Provides power management integrity for devices that enter and leave the system.

INTEL SPEEDSTEP
Intel SpeedStep allows your LifeBook to operate in dual mode. When connected to AC source, the system operates in Maximum Performance mode. When powered by battery, the system switches to Battery Optimized mode to conserve battery life. SpeedStep software is automatically loaded when you start your system and appears on the system tray as one of the two flags. A checker flag indicates that the system is set for Maximum Performance mode. A blue flag with a green center square indicates that the system is set for Battery Optimized mode. You can change the setting or disable the software by double-clicking the flag icon and changing the settings in the Intel SpeedStep Technology window.
Glossary
Glossary

AC Adapter
A device which converts the AC voltage from a wall outlet to the DC voltage needed to power your LifeBook.

ACPI
Advanced Configuration and Power Interface. An industry specification for the efficient handling of power consumption in mobile computers. ACPI determines how a computer’s BIOS, operating system, and peripherals communicate with each other about power management.

Active-Matrix Display
A type of technology for making flat-panel displays which has a transistor or similar device for every pixel on the screen.

APM
Advanced Power Management.

Auto/Airline Adapter
A device which converts the DC voltage from an automobile cigarette lighter or aircraft DC power outlet to the DC voltage needed to power your LifeBook.

BIOS
Basic Input-Output System. A program and set of default parameters stored in ROM which tests and operates your LifeBook when you turn it on until it loads your installed operating system from disk. Information from the BIOS is transferred to the installed operating system to provide it with information on the configuration and status of the hardware.

Bit
An abbreviation for binary digit. A single piece of information which is either a one (1) or a zero (0).

bps
An abbreviation for bits per second. Used to describe data transfer rates.

Boot
To start-up a computer and load its operating system from disk, ROM or other storage media into RAM.

Bus
An electrical circuit which passes data between the CPU and the sub-assemblies inside your LifeBook.

Byte
8 bits of parallel binary information.

Cache Memory
A block of memory built into the micro-processor which is much faster to access than your system RAM and used in specially structured ways to make your overall data handling time faster.

CardBus
A faster, 32-bit version of the PC Card interface which offers performance similar to the 32-bit PCI architecture.

CD-ROM
Compact disc read only memory. This is a form of digital data storage which is read optically with a laser rather than a magnetic head. A typical CD-ROM can contain about 600MB of data and is not subject to heads crashing into the surface and destroying the data when there is a failure nor to wear from reading.

CMOS RAM
Complementary metal oxide semiconductor random access memory. This is a technology for manufacturing random access memory which requires very low levels of power to operate.

COMM Port
Abbreviation for communication port. This is your serial interface connection.

Command
An instruction which you give your operating system. Example: run a particular application or format a floppy disk.

Configuration
The combination of hardware and software that makes up your system and how it is allocated for use.

CRT
Cathode Ray Tube. A display device which uses a beam of electronic particles striking a luminescent screen. It produces a visual image by varying the position and intensity of the beam.

Data
The information a system stores and processes.

DC
Direct current. A voltage or current that does not fluctuate periodically with time.

Default Value
A pre programmed value to be used if you fail to set your own.

DIMM
Dual-in-line memory module.

Disk
A spinning platter of magnetic data storage media. If the platter is very stiff it is a hard drive, if it is highly flexible it is a floppy disk, if it is a floppy disk in a hard housing with a shutter it is commonly called a diskette.

Disk Drive
The hardware which spins the disk and has the heads and control circuitry for reading and writing the data on the disk.
Diskette
A floppy disk in a hard housing with a shutter.

DMA
Direct Memory Access. Special circuitry for memory to memory transfers of data which do not require CPU action.

DMI
Desktop Management Interface. A standard that provides PC management applications with a common method of locally or remotely querying and configuring PC computer systems, hardware and software components, and peripherals.

DOS
Disk Operating System (MS-DOS is a Microsoft Disk Operating System).

Driver
A computer program which converts application and operating system commands to external devices into the exact form required by a specific brand and model of device in order to produce the desired results from that particular equipment.

ECP
Extended Capability Port. A set of standards for high speed data communication and interconnection between electronic devices.

ESD
Electro-Static Discharge. The sudden discharge of electricity from a static charge which has built-up slowly. Example: the shock you get from a doorknob on a dry day or the sparks you get from brushing hair on a dry day.

Extended Memory
All memory more than the 640KB recognized by MS-DOS as system memory.

FCC
Federal Communication Commission.

Floppy Disk
A spinning platter of magnetic data storage media which is highly flexible.

GB
Gigabyte.

Hard drive
A spinning platter of magnetic data storage media where the platter is very stiff.

Hexadecimal
A decimal notation for the value of a 4 bit binary number. (0-9, A, B, C, D, E, F) Example: 2F in hexadecimal = 00101111 in binary = 47 in decimal.

I/O
Input/Output. Data entering and leaving your LifeBook in electronic form.

I/O Port
The connector and associated control circuits for data entering and leaving your LifeBook in electronic form.

IDE
Intelligent Drive Electronics. A type of control interface for a hard drive which is inside the hard drive unit.

Infrared
Light just beyond the red portion of the visible light spectrum which is invisible to humans.

IR
An abbreviation for infrared.

IrDA
Infrared Data Association. An organization which produces standards for communication using infrared as the carrier.

IRQ
Interrupt Request. An acronym for the hardware signal to the CPU that an external event has occurred which needs to be processed.

KB
Kilobyte.

LAN
Local Area Network. An interconnection of computers and peripherals within a single limited geographic location which can pass programs and data amongst themselves.

LCD
Liquid Crystal Display. A type of display which makes images by controlling the orientation of crystals in a crystalline liquid.

Lithium ion Battery
A type of rechargeable battery which has a high power-time life for its size and is not subject to the memory effect as Nickel Cadmium batteries.

LPT Port
Line Printer Port. A way of referring to parallel interface ports because historically line printers were the first and latter the most common device connected to parallel ports.

MB
Megabyte.

Megahertz
1,000,000 cycles per second.
**Memory**
A repository for data and applications which is readily accessible to your LifeBook CPU.

**MHz**
Megahertz.

**MIDI**
Musical Instrument Digital Interface. A standard communication protocol for exchange of information between computers and sound producers such as synthesizers.

**Modem**
A contraction for MOdulator-DEModulator. The equipment which connects a computer or other data terminal to a communication line.

**Monaural**
A system using one channel to process sound from all sources.

**MPU-401**
A standard for MIDI interfaces and connectors.

**NTSC**
National TV Standards Commission. The standard for TV broadcast and reception for the USA.

**Operating System**
A group of control programs that convert application commands, including driver programs, into the exact form required by a specific brand and model of microprocessor in order to produce the desired results from that particular equipment.

**Parallel Port**
A connection to another device through which data is transferred as a block of bits simultaneously with a wire for each bit in the block and with other wires only for control of the device not for transfer of data.

**Partition**
A block of space on a hard drive which is set aside and made to appear to the operating system as if it were a separate disk, and addressed by the operating system accordingly.

**PCMCIA**
PCMCIA is a trademark of the Personal Computer Memory Card International Association. The Personal Computer Memory Card International Association is an organization that sets standards for add-in cards for personal computers.

**Peripheral Device**
A piece of equipment which performs a specific function associated with but not integral to a computer. Examples: a printer, a modem, a CD-ROM.

**Pitch (keyboard)**
The distance between the centers of the letter keys of a keyboard.

**Pixel**
The smallest element of a display, a dot of color on your display screen. The more pixels per area the clearer your image will appear.

**POST**
Power On Self Test. A program which is part of the BIOS which checks the configuration and operating condition of your hardware whenever power is applied to your LifeBook. Status and error messages may be displayed before the operating system is loaded. If the self test detects failures that are so serious that operation cannot continue, the operating system will not be loaded.

**Program**
An integrated set of coded commands to your computers telling your hardware what to do and how and when to do it.

**PS/2**
An IBM series of personal computers which established a number of standards for connecting external devices such as keyboards and monitors.

**RAM**
Random Access Memory. A hardware component of your LifeBook that holds binary information (both program and data) as long as it has the proper power applied to it.

**RAM Module**
A printed circuit card with memory and associated circuitry which allows the user to add additional memory to the computer without special tools.

**Reset**
The act of reloading the operating system. A reset erases all information stored in RAM.

**Restart**
See Reset.

**Resume**
To proceed after interruption. In your LifeBook this refers to returning to active operation after having been in one of the suspension states.

**ROM**
Read Only Memory. A form of memory in which information is stored by physically altering the material. Data stored in this way cannot be changed by your LifeBook and does not require power to maintain it.

**SDRAM**
Synchronous Dynamic Random Access Memory.
Serial Port
A connection to another device through which data is transferred one bit at a time on a single wire with any other wires only for control of the device not for transfer of data.

Shadow RAM
A technique of copying data or applications stored in ROM (Read Only Memory) into RAM (Random Access Memory) for access during actual operation. RAM is much faster to access than ROM, however ROM contents are not lost when power is removed. Shadowing allows permanently stored information to be rapidly accessed.

SMART
Self-Monitoring, Analysis and Reporting Technology (SMART) is an emerging technology that provides near-term failure predictions for hard drives. When SMART is enabled the hard drive monitors pre-determined drive attributes that are susceptible to degradation over time. If a failure is likely to occur, SMART makes a status report available so that the LifeBook can prompt the user to back up the data on the drive. Naturally not all failures are predictable. SMART predictability is limited to those attributes which the drive can self-monitor. In those cases where SMART can give advance warning, a considerable amount of precious data can be saved.

SRAM
Static random access memory. A specific technology of making RAM which does not require periodic data refreshing.

Status Indicator
A display which reports the condition of some portion of your hardware. On your LifeBook this is an LCD screen just above the keyboard.

Stereo (audio)
A system using two channels to process sound from two different sources.

Stroke (keyboard)
The amount of travel of a key when it is pressed from resting to fully depressed.

Suspend
To make inoperative for a period of time. Your LifeBook uses various suspension states to reduce power consumption and prolong the charge of your battery.

SVGA
Super VGA.

S-Video
Super Video. A component video system for driving a TV or computer monitor.
